How sad your statement is. It is unfortunate that some people chose to continue these problems after BC's demise. The people who instigate these actions ought ot be ashamed. BC has passed, & we ought to let him rest in peace by forgetting all the problems he caused.

Source record: 54772

In my experience the discriminator output is very high impedance and anything I hook to it loads the circuit. The tuning meter will also pull to one side if the circuit is disturbed. I was going to use a FET buffer amp to isolate it but never got around to it. I would also be interested in hearing about successful use of the 7100 discriminator.
Mike

5. trying to decipher cell phone freq's pattern

Newsgroup: rec.radio.scanner
Date: 2002-01-01 03:14:42 UTC
From: Karl <usereplytoaddress@hotmail.com>
Message-ID: <CQ9Y7.151637$8w3.32405400@typhoon.kc.rr.com>
Source record: 54774
Cross-posted to: alt.radio.scanner,rec.radio.scanner

ok, first off, yes I know that it's illegal so instead of flaming, just don't answer.

I scanned the freq range from 894 to 900 MHz and found a pattern. They all end with the numbers, 00, 12, 25, 37, 50, 62, 75, 87. For example 894.000, 894.012, 894.025, 894.037, thru 894.900, 894.912, 894.925, etc... therefore there should be 78 frequencies under 894 MHz. Extrapolating that out to the above range of 894 to 900 there would be 546 possible frequencies.

But since I only have a 200 channel scanner I can't program all those into it. I noticed that some of the freq's are repeated; I believe that is what is called an image. Only problem is that it didn't seem to be consistent. Sometimes it was repeated and sometimes not.

Does anyone know what the pattern is? Is it the ones that are separated by 12 that are the same? Or the ones separated by 13? Or maybe none of the above? Would they be grouped instead as (00, 12), (25, 37), (50, 62), and (75, 87) thereby only having 4 groups per freq range instead of 8? In other words could I program 894.025 and not worry about 894.037 because they are essentially the same? Or am I totally off base on this one?

Hope that all makes sense to someone. Thanks,
Karl

Back before it became illegal to monitor, here's what I did. I got
all the frequencies from that neat list in Bill Cheek's scanner book.
Then I went to Kinko's and copied it, enlarging it to where I could
read it. Then I programmed the frequencies into the SEARCH bank.
As I heard activity on the frequencies, I used highlighters to mark
off the channels used. Ater a while patterns of usage started to
develop, I might hear 6 frequencies in an "A" cell and 10 in a "B"
cell. After five or six weeks of monitoring I found the frequencies
in a cell that were likely to be used by a caller. If they switched
to another cell, it was fairly simple to find them again quickly,
especially if I knew where they were and where they were going. Most
of the time they just said it out loud. If the caller was in a "D"
cell, for instance, they wouldn't be transferred to a "C" or an "E"
cell, as that's how the frequency allocation is set up. Once you see
the cell map as described in Bill Cheek's book, it becomes easier to
figure out. It's probably even out there in a text file.

7. Re: Descriminator mod ICOM IC-R7100

Newsgroup: rec.radio.scanner

For Baseband Audio out, I mounted an RCA jack on the back
of the R7100A and connected it via shielded cable
to the junction of resistors R228 and R230 on the Main Unit.
This point is located in the vicinity of IC15 and X3
on the schematic.

I posted this in 1996 and sold the R7100A afterwards.

Mainly use mine for severe weather. We out-performed Witchita Kansas a few
years ago and was pronounced tornado capital of the year that year. I use
it to monitor TV and police and city freqs while at work or in my basement.

When we visit Nashville, Tn, I like to listen to approach and departure. One
day, we were there and several fire trucks and emergency vehicles suddenly
poured onto the runway. Via the scanner I was able to determine that the
lear jet on final may have had a nose gear that did not lock. But, fortunately,
it landed safely and did not have an accident.

This is a dicey question... It is apparently not illegal to LISTEN to phone comms, but it is to DISCUSS phone comms listened to.

My take - if these damn fools think they have any claim to privacy when broadcasting, there is none. Broadcasting? That's pretty much what they are doing. It is a non-directional, non-encrypted signal, being sent with all the discretion of a loud-hailer. If you want privacy, take action to secure it...

If I can receive it, it is hitting me anyway, and I have a right to know what signals are impacting upon my person...

analog cellular frequency distribution is VERY specific and controlled. it is regulated by " cells " in which you reside at any given time. for instance , I'm in the " a " provider cell number 314 ... this cell has (as do all analog cells) 16 related transmit (by the tower) frequencies and 16 related (tower input) freqs. bordering my cell is cell 320 on the mid right , cell 325 upper right , 331 upper left , cell 329 mid left , 324 lower left and 328 lower right. each of these cells has 16 input and 16 output channels too. each cell has 6 sides , all cell coverage is duped by the " b" provider ...but on higher freqs. (channels) Sound complicated ...?? .... it is ..... get the " Motorola Bible " and read all about analog cell distribution and related cell freqs.

http://homepages.ihug.co.nz/~ugh/
(plus MANY listings for it on Yahoo)

A cheap $5 motorola brick, bag or flip is handy to identify cells and generate a cell grid map for your part of town ... or the whole area. (jump two contacts on the brick and it displays the cell ID info ..where ever you are .. plus signal strength data too)

Remember that actually listening to cellular conversations , in the USA , is illegal. If you could listen to cell channels legally ..it is unnecessary to program ALL 800 (or whatever) channels as they are repeated , cell by cell at certain distance intervals. You only need the one you are in (and you will always be in one) ..and the adjacent cells and the ones adjacent to those. past those .. you will be so far away from the others that they will start to interfere with each other ... this with an omni antenna . a beam can cure that problem , tho.

It's a real nice radio... some people complain that it is a pain to program, but I find it simple once you get used to it.. You are (currently) limited to sony's software, which frankly sucks.. There is a cell mod and a keypad trick to get it to receive down to 200khz (however, sensitivity is reportedly poor below 5mhz). Check the archives of www.yahoogroups.com "SonySC1" and "SonyWavehawk" for the instructions...

Does anyone have any software so I can use my ICOM ic-pcr1000 scanner with windows XP??

ive just spent £300 + DSP unit for this scanner and now i've updated to XP
it wont work.....

i get this error when trying to get the icom and p.c to communicate!!!

APPLICATION ERROR
PCR1000 caused a general protection fault in module OLE2DISP.DLL at 0001:0B20.
Choose close. PCR1000 will close.

god nowts easy nowadays...

Chris

MAKING YOUR OWN ANTENNA

BY N1CSS

There are many reasons why you would want to make your own antenna, perhaps you live in an area that doesn`t allow outdoor antennas, Or perhaps the budget doesn`t allow for the latest super - duper stainless steel wonder for 40 or 50 dollars. Maybe you live in a neighborhood where you wouldn`t want to "advertise."

What I am going to describe here is just a simple half - wave antenna, that will give you good reception for anywhere from 20 to 40 miles, that you can build yourself for probably 15 or 20 dollars. (you can probably do it cheaper than that, if you have some decent coax cable lying around). The reason I suggest a half wave antenna is, that radials really aren`t needed. So let`s proceed.

LENGTH OF THE ANTENNA

The length of the antenna will depend on just what frequency band you want to listen to. Most people are interested in the Public Safety bands, which are right around 155 MHZ. You can figure out the length of the antenna for any band with the following formula:

468 / Freq (in MHZ)

This gives you a half wave, in feet and fractions of a foot. Using 155 MHZ as an example, we would come out with:

468 / 155 = 3.019 feet

Now, we can convert the fractional part of the answer into inches by multiplying it by 12 (the number of inches in a foot). This comes out to:

.019 X 12 = .228

.228 is close enough to a quarter inch so it won`t matter. so our antenna will be 3 feet, one-quarter inch long for 155 MHZ.

CONSIDERATIONS

We are going to make this antenna completely from a piece of coaxial cable. Which coax you use would depend on how long the run from the scanner to the antenna will be. If the run is going to be 10 or 15 feet, then you can use almost any coax, since the loss in a short run like this would be fairly insignificant. The idea here is to get the antenna as high up in the structure as you can. You will mount this at one end of the attic, where the

wall is straight up and down. So figure your length accordingly. rg-6 TV coax works well, and is readily available at the local Radio Shack store. Don`t forget to get a connector to convert the screw on connector on the end of the cable to a BNC connector that will fit your scanner jack. Get about 6 or 8 feet of #18 or #20 hookup wire, since we will have to ground the scanner chassis/coax braid in order for this to work properly. Stop off at the local Agway or other yard / garden store, and get a couple of Electric fence insulators, as small as they have, that mount to a wooden post with a nail. However, people with metal - shelled mobile homes and people with metal roofs need read no further, since this will not work with these kinds of structures. I am speaking here of a regular wood - frame building with regular roofing materials. Metal will block out the radio signals. People who live in these will have to resort to other means (of which there are quite a few). I will discuss these in another tome.

CONSTRUCTION

Now, you are going to have to make a hole into the attic somewhere, in order to let the coax pass up into it. Pull the coax up through, and over to where the antenna is going to be mounted. Take a good sharp knife, a small hammer, and a tape measure up with you. A small pair of scissors doesn`t hurt the process, either.
Clip the connector off this end of the coax. You don`t need it for the antenna end. Now, measure down the coax to the point corresponding to the length determined in the formula. If you are doing an antenna for 155 MHZ, I would measure three feet, but nit - pickers and perfectionists will have to get it perfect. We are now going to remove the outer hide from the coax. this will expose the shield braid underneath. You can then push the shield braid down the coax, to expand it and make it easier to work on. Give the shield a "haircut" right at the same point, and slide it right off the end. clip any stray wire in the shield even with the jacket. We are now down to the inner foil shield, which can be removed by just going around it with the knife, and pressing the blade into it, but not hard enough to cut the center wire ! When you have gone all the way around, slide it and the plastic core off the center wire. Your antenna is now finished, so it is time to mount it. Choose an appropriate end stud in the attic, that is tall enough to mount the antenna to, and start one of the insulators in the top. slip the top of the antenna wire into it, and tap it home. repeat at the bottom of the bare antenna wire. do NOT mount the antenna to the roof rafters, at an angle, or you will get very little signal. STRAIGHT UP is the rule here. You`re done in the attic. Go down to the radio end.

THE BUSINESS (RADIO) END

Before we hook up the connector to the radio, we have an important task to do. Look the radio over, and see if there is a screw you can loosen up, maybe on the back of it, that goes into the metal chassis of the rig. This will be your ground point. Take the hookup wire you bought, and strip the insulation off one end for about 1/2 inch. Make a loop, and put it under the screw, and tighten it up again. take the other end, and strip off 1/2 inch of insulation, and go to the nearest electrical outlet. (No, I am NOT trying

to "blow up your radio). The center screw that holds the face plate on the outlet is ground. Take the screw out, and make sure that there is bare metal showing under the screw head. If there is paint, then take the knife and scrape the paint off on the bottom of the screw head. We want a good connection here. Put the wire under the screw head, and tighten it up again. (Don`t overtighten, they strip out fairly easily)

If there is no screw on the radio you can use, or you have a hand - held that you like to use elsewhere, then we use a little different method. We need to ground the shield on the coax instead. If you have a fair - sized needle around, then you can work this under the hide of the coax, but do NOT stick this straight into the coax, as you will short out the coax and undo all your work so far ! Leave about 1/2 or 3/4 inch of the needle on the outside of the jacket, and just wind the bare end of the hookup wire around it and the coax. Some plastic electrical tape would be handy here, as you just tape the wire, needle and coax by simply going around the whole thing for a few turns. The idea is to make a connection to the shield of the coax with the ground wire, as close to the radio as possible.

WHY IS GROUNDING SO IMPORTANT ?

I am sure you have seen the postings on the news groups. "I moved my scanner into the computer room, and all i get is noise on it ! " or "Why does my scanner lock onto empty channels every time I turn on the TV ?" An understanding of just what the shield on the coax does for a living will help you understand why it is IMPERATIVE that you ground it ! The shield of a coax has an important job to do. It is designed to KEEP NOISE OUT OF THE COAX. We only want to hear what the ANTENNA is picking up, NOT the harmonics of the oscilators in the TV, stray RF harmonics of the blower motor in the furnace, RF noise from the computer, etc,etc,etc, ad nauseum. The average home is a hotbed of RF interference.
There is another reason. We carefully cut the antenna to a resonant length for the band we want to listen to, right ? But the fact is, that until you ground the shield on the coax, THE WHOLE CENTER CONDUCTOR OF THE COAX WILL ACT AS AN ANTENNA, UNDOING ALL OUR CAREFUL TUNING AND PRUNING ! This is because, the shield of the coax DOESN`T EXIST ELECTRICALLY UNTIL YOU GROUND IT ! This ALSO DEGRADES THE SIGNAL - TO - NOISE RATIO OF THE SCANNER DOWN TO ALMOST 0 ! This HELPS THE ELECTRICAL NOISE IN YOUR HOUSE WIN ! Remember, some of the interfering signals in your home environment are hundreds or even THOUSANDS of times stronger than the signals you are trying to monitor ! Do yourself and your scanner a favor, and ground the shield. This is especially important if you are running the rig off a wall - wart supply, or something other than the regular 110 volt mains, since you really dont have a ground on those !

THE FUN PART
(OR HOW I BEAT RADIO SHACK OUT OF 30 BUCKS)

Now, hook up the coax to the scanner, and enjoy the hell out of it. You will get solid reception on signals you could barely hear with the rubber duck antenna, and you will hear signals you couldn`t even hear at all before ! The range of the scanner will be increased TREMENDOUSLY. 20 miles is common,

and 30 or 40 is certainly not unheard of ! You did it yourself, you saved money, and nobody is the wiser ! Now THAT is satisfaction ! Settle back with your beer. You earned it !

what if i just get any old antenna - size any old size - and get a radio shack signal booster thingy. will that work as well?

Good old Pozilla, I see the realisation that their WinScan* demo's had
been hacked is about as fast as their software support.. Surprisingly
Scanner Master:

http://www.scannermaster.com/

Are still carrying WinScan* demo's..

Supposedly they found the hacks by searching this site for 'winscan':

The shield is as "grounded" as it needs to be, when it's connected to the radio.
Other than that< it"s a great article.

The FCC also receives many inquiries regarding the interception and
recording of telephone conversations. To the extent these
conversations are radio transmissions, there would be no violation of
Section 705 if there were no divulgence or beneficial use
of the conversation. Again, however, the mere interception of some
telephone-related radio transmissions, e.g., cellular,
cordless and landline conversations, may constitute a criminal violation of
other Federal or State statutes. Further, there are
Federal and State tariffs that impose conditions for recording telephone
conversations. See Use of Recording Devices, 2 FCC
Rcd.502 (1987).

> what if i just get any old antenna - size any old size - and get a radio
> shack signal booster thingy. will that work as well?

Poorly.

Scanner antennas are somewhat difficult, because the scanner is typically a broadbanded device.
I have an IC-R8500 receiver, which is probably the outer end of this problem. It receives from 0.1 to 1999 MHz. No practical antenna is going to be useful over this range.

The dipole that was discussed is not a broadband antenna, nor was it presented as one
It's a good antenna for the public service bands, (or whatever band you construct it for), but it has a finite, and not large, bandwidth.

The Discone is probably the closest you'll come to a "DC to Daylight" antenna.

That's what I use, with an amplifier, as you suggest, to overcome the discone's low gain, and to drive four outputs, which go to four radios. It has reasonable gain from the ham 2 meter band through a GHz or so, and that suits my needs.

Unfortunately, amplifiers are not always a good thing. They amplify everything that comes down the pipe, and they add noise of their own. In my case, I get strong signals from local cell sites, and a local FM broadcaster. These signals tend to de-sense my receivers, so I have added handmade stub filters that cut them down by 40dB before they enter the amplifier.

With an antenna that is not cut for the frequency of interest, you will probably have signals that are stronger than the desired signals. Those then get amplified, and you add the amplifier's noise. All in all, not great.
It may be an improvement over something else, but you could get a lot more use out of your equipment if you take a little care to use it properly.

Last Saturday, I picked up a BC-60XLTfor $100 at Wal-Mart. I thought that I did pretty good. That's about the price I would pay on E-bay, minus the S/H charges.

Last night I picked up a copy of Monitering Times, and on the fifth page, I saw an ad from Amatuer Electronics supply (www.aesham.com) advertising the Yaesu VR-120 handheld reciever. This bad boy covers everything from .1 to 1299Mhz for the modest price of $130. My Bearcat scanner only covers 30 to 512Mhz! I really feel gipped.

I would appreciate it if anyone here has tried one of these Yeasu receivers and if they could tell me if they are really that great considering they recive such a huge range of frequencies for such a low price.

you have grounded the shield if you ran the hook up wire to the screw on the hydro faceplate as indicated in the instructions. if you are near a water pipe this will also make a good ground connection wrap the hook up wire around the pipe and secure with a hose clamp.

If your scanner is a base with a 3 prong plug it is most likely already grounded (you can verify with an ohm meter if you have one).

I haven't noticed it to be a problem. Just looked at mine under my
desk lamp and they seem fine. I got it this spring, and it's been used
quite a bit.

I suspect if they did start to rub off though it could be fixed
easily. I took this unit apart not long ago, and the keys are just a
hunk of rubber that I'm sure Uniden would sell you - easy to replace.

Looks great!
I like the concept of mass insertion (pasting) from data bases, something the WinScan doesn't
do.

Good question. It states in the book that it will do just that. It says willl clone or transfer from PC. I bought the POLICE CALL 2002 version yesterday after I bought my PRO-93 and it came with the national CD-ROM included in the back that has the software to program the unit but says PRO-2052, I'm almost sure it will work on the 93 also. I am going to build my own cable from a schematic I found on the web. Radio Shack wants $69.99 on the cable and they have to order it. They do not stock it. I sure hope the list any cellular mods for this unit.

There definitely IS a cell mod. It requires a steady hand, a magnifying lens, a fine-tipped tweezers, a fine-tipped soldering iron and a bit of skill, but it works!

As stated before: check the archives of www.yahoogroups.com "SonySC1" and "SonyWavehawk" for the instructions and other tips on performing it.

I'd love to have had mine long enough to experience wear issues.
I bought a 780 the second week of Oct., had it about three weeks and noticed an irregularity.
It went back the 1st of Nov. and I'm still waiting for it. (doesn't get much wear that way).

59. pro-2004 AC Power short circuit

Newsgroup: rec.radio.scanner
Date: 2002-01-02 02:55:05 UTC
From: epaetz41@hotmail.com
Message-ID: <bff806e9.0201011855.71f5ff15@posting.google.com>
Source record: 54728

A frayed AC power cord on my Radio Shack Pro-2004 scanner arced last night and the unit went dead. The arcing left a burn mark on the table top. If anyone has had the same experience or any suggestions I'm all ears.

I did not see any type of fuse inside the unit. I was wondering if I just replaced the transformer, would the unit be operational. Or, did I blow some of the circuitry should I just allocate it to the dead electronics pile in my attic?

Also, I haven't tried running DC power to it yet because I don't have a wall unit that supplies the correct voltage and has the proper connector. Even with the AC blowout, could it still operate on DC voltage in?

Thanks,
Eric

I have 2 of these scanners I have been using and one has quit
recieving. It comes on, scans and the squelch works. My problem is for
example is when I press the "WX" for weather the light only blinks no
sound. I disconnected the antenna from the 2nd scanner (that works)
and pressed the "WX" button and the light only blinks. It is as if the
1st scanner is not reconizing a signal.
Any advise or suggestions will be greatly appreciated. The scanners
are older but still do fine for my needs.

That cable will not work with the PRO-93. The 93 uses the same cable
as the 92. Software is different. RS has not yet released software
for the 93.

Check out the pro-93 group at Yahoo for a lively discussion of cables.
If you join the group, you'll get access to the files area, which has
software for the 93.

Yes you can operate it on DC. Good way to see if it died. I suspect if
you just replace the power cord you will be okay. What makes you
believe anything else is bad? It was just the cord right?

Glenn

Looks good! Any chance of a Linux/Unix version of the software or of available source code for the DIY type? I could use something like this here since I'm on the verge of retiring my 2005's and 2006's in favor of some new rigs - the 780 being close to the top of the list.

(I have the pro-94 radio shack,, but not sure if that matters)

when you are programming in trunk & regular 'one' channel frequencies, can they all be on the same bank?

I have it set to search the trunks & conventional frequencies,, but am wondering what is the difference to set it(the group of named trunk frequencies) up AS a trunk (as the directions inform you to do) when it still lists the numbered spots in the bank & you can see them 'wiz' by... what would be the difference to just putting them in as REGULAR conventional frequencies?

so far I have found only ONE trunked set of 8 stations(frequencies)....(to load into it)

(so I have bank 1 ch 1 to 8 as the trunk & the rest as singular)

also WHAT the heck is a "fleet" & group ID lists?
how do you tell, what do you use them for? etc....

Hi. I have been shopping around for a bearcat 780xlt. Actually, i am looking to buy one for me, and one for my uncle (he's paying his own way here!!) I was wondering if there was any decent place to buy this from. I was considering HRO (www.hamradio.com) or even scannerworld.com, but i am trying to shave off the tax (new york 8.5%). Can anybody point me in the right direction for a reliable store to buy 2 scanners from? Can anybody believe that buy.com wants $499 for the scanner???
thanks for all your help
happy new year

phil

72. Re: trying to decipher cell phone freq's pattern

yes .... (to answer a question with a bad return email addy) ... it
WAS / IS quite easy to monitor and follow signals cell to cell .. from
frequency hop changes or by monitoring the signal that commands
the mobile handoff channels (done easily using many DDI programs
or the c-tek / oki-900 setup) A quality " cell map " of your town
or sector of town , hand printed on a nice city streets map (or
GPS mapping setup , nowadays) and a scanner , were all that
was needed to follow people around town ... using just the cellular
signal location. (this back before it became illegal < in the USA >
to monitor cellular conversations) Locating the current channel
and then monitoring the " hops " or " handoffs of the towers on
an inactive but registered < turned on > cellfone " .... and
referencing the channels on your cell / channels reference list ...
was all that was needed to easily track the " exact street and
direction people went. Police , detectives and especially government
agencies used this methodology to great advantage. New switchgear
software and cellular tracking programs have made this task much
easier , today. (for police or agency uses , only) ... the NEW
cellular GPS / locator ID code , rules will make it even easier and
more accurate.
IN the USA , cellular monitoring is illegal , a federal offense.
This mentioned methodology only works (as stated) for analog
cellfone location tracking ...finding and tracking the location of PCS
, tdma , and smr equipment requires expensive " cell site " testing
equipment (like the LCC EXP-2001 or the " Foxx " type monitors)
..frequently available used on Ebay at reasonable prices ..often under
$150. (often $650 to $10,000 ...tho ...)
WARNING ..professional or authorized " provider " , police or federal
agency use only ..private use of such equipment likely breaks numerous
federal and state laws. cellular providers usually do the tracking and
policing of their own systems first ..then report criminal activity to
the appropriate agency or authority, when necessary.

WEll, yes and no.
More than once I have over the years heard Railroad types complain
that the locals monitor them. Of the big guns, I can see NS being
among the first to make such a move; they are the least railfan
freindly of any.

> Trunking may start to become common, especially in congested areas.

That program looks AWESOME!! It's nice to see a 780 programming tool that isn't bloatware ;)

Now for the question I have....By any chance, will the cut and paste feature be similar to how it is in Excel, whereas, you can cut and paste a huge portion of data and move it around (eg: moving channels from bank 1 into bank 3 without having to do each channel individually.). That is my favorite feature about Andy's programmer.

Keep up the great work

Sure, how many scanners could buy.com actually sell? Everyone knows them for computer hardware and software, not for radios.

My first stop is always Grove (www.grove-ent.com) followed by Universal (www.universal-radio.com). I've been buying from Bob (Grove) for 12 or 13 years now and I've bought from Universal once recently. I have nothing negative to say about either, and I could go on for another page or two about the great experiences I've had dealing with Grove over the years.

All I can say is personal experience, but when I lived
and worked in Albany, Scannerworld was always good to give
a nice discount to area public safety personnel. Must
have passed the store at least 20 times a day.

the Data port on this scanner is a discriminator output...
a discriminator output is a audio output without any filters..(clear audio)
thsi is normaly used for decoding data like acars,pocsag,sstv,fax etc..

Alrighty folks, here's the simple skinny. Yes it is illegal to listen to cordless and cellular frequencies. But if no one knows you have that capability, how are they gonna bust ya?

If you have the capability to monitor those frequencies, shut the hell up about it and DON'T tell anyone about anything you might have heard, as well as the capabilities of your equipment. Its just that simple. Enjoy it, but keep quiet about it.

Same legally applies for most anything that you can legally monitor other than ham frequencies, if you hear it, don't repeat it.

It is the big mouthed people who have ruined a good portion of what we can listen to legally any more.

If you are looking for the cheapest place to get the scanner from, try out Communications Electronics. Their shipping is a little high, but even with their high shipping, the total price is LESS than everyone else is asking for their scanners regular price without shipping. CE also throws in a set of headphones from scanner listening. Can't say how good they are, but they are free, so what the hell!

I have so many frequncies stored and a lot I don't know are for what.
I would like to "CLEAR" all and reload only the ones I want.

Any ideas??
Thanks.
Ken

Hey, I know...since you clowns cannot let your hatred of Cheek die, perhaps we should start reposting some "Classic Cheek." Kind of like "Classic Peanuts" comics, which began publication after the death of Charles Schulz.

I always liked this one:

Subject: A Story of Petey Joe Boe
Date: Sat, 27 Jul 1996 06:20:15 GMT
From: bcheek@cts.com (Bill Cheek)
Organization: COMMtronics Engineering
Newsgroups: rec.radio.scanner

Listen, my friends, and I shall tell you a short story of the schizo-freako-paranoidal-hermaphrodyte fondly known as Petey Joe Boe (PjB). I repeat this story from memory as it was told to me by Captain Larry of "The River Dragon" fishing boat.

Now this lad, Petey, lives in Portland, Oregon, not far from the banks of the mighty Columbia River. Being an out-of-work piano teacher and in desperate need of something to eat, weary of a diet of Depo-Provera and Prozac, the fine strapping Petey found himself down by the river applying for work in the fishing fleet.

Much to his relief, the fine Petey was immediately hired, but because of no experience in the fishing industry, he was required to start at the bottom of the ladder as an Apprentice Baiter at minimum wage.

Not content with swimming around on the bottom of the barrel, the lad Petey learned about anchovies, cut mackerel, chum, and hooks, so that within about six months, he was advanced with a double-pay hike to Journeyman Baiter. His mother was so proud!

Thusly inspired and proud of his handiwork, the magnificent Petey got down to serious work with the arts and sciences of baiting like there was no tomorrow. Surprise, surprise, surprise! Three months later, the boy Petey achieved his crowning glory as he was elevated to the highest rank of all, Master Baiter.

Bravissimo, Boe! Way to go! <applause> <applause> <applause>

....
.....<pausing for more applause>........
....

In another installment, if interest warrants, I'll relate the anecdote of how Master Baiter Boe got cured of a monstrous tapeworm.

> And that also where Avraam stole the idea's from..

my application will not be on the same level with arc780
my app. will be the standard or basic version and BuTel's application is the
professional or enterprise edition...
I will have in my app. only the basic options, the options you use daily...
all other options you will find in arc780.

the difference: my app will be free and soon available for Linux too, and
for arc780 you pay $25 but you get a lot more options.

Actually, yes. I'm spending today at home, in front of a roaring fire, killing time. Had some "use it or lose it" vacation time accrued which I need to use up before 1/7/2002. So, I'm taking the rest of this week off...with absolutely nothing that I need to do. Rotten weather outside, so I'm not going anywhere. Finally have some "quality time" to devote to the 'ol radio newsgroups.

To further answer your question, no, I don't file away posts. Guess you've never heard of "Google", formerly known as Deja News.

Yup! Yup! Yup!!

I think ole KA4MUJ (sk) was right when he said these people had "a disease".
Can't get it out of their system. It's all they LIVE FOR which means we have much
more radio fun to look forward to. I still miss the Mike and Judy show however.
When Raincoat Charlie would get in there and talk about "4x D-Cell vibrators"
and such, it was like live comedy theater you'd pay $35.00 a seat for downtown
right out of your speaker for free. It can only get better in 2002. When NR5T and
EVE get in there it's a 3-ring RF circus. So all you SWL's get tune in to 14.313 USB
for some daytime and weekend radio fun.

For a retired old geezer like myself, the cost is one of the main
considerations.
Good luck with it,
....and I hope you realized I was joking last week about "patching" your splash
screen.

We use a lot of those scanners in our cars at work.In the mobile environment they are subject to lots of abuse and vibration.A problem we have had is the solder connection on the PC board breaking at the DC connection jack and the antenna plug.This has the effect of internally disconnecting the antenna from the scanner,so...no signal.Open up your radio and check that connection...reflow the solder joint and check the area of signal input at the front end of the radio (antenna input circuit) for any cracks in the PC board.Good luck.
Shane.

Hello,I have for sale in mint condition a Yaesu FT50 dual band handheld
with ofiginal box and owners manual.It also has general coverage recieve
with FULL 800 mhz coverage.Included are the following accessories.
CSC 68 vinyl case
MH-34 speaker mike
E-DC-6 cig. lighter adapter
CD-12 desk charger
FBA-15 alkaline battery case
FNB V47 hi-cap battery
FNB-41 standard cap battery
"Multiplier"hi-cap battery
beltclips
All above in excellent condition.$200 + shipping to 48 states.Cashiers
check or money order.No trades needed,thanks.
If interested e-mail.
Thanks,Shane.KE6JZ.

Hi,
Was wondering if anyone had a faq or doc for setting up MDTMON, for my Optcom, I'm running Windows2k, and it freezes up (mdtmon does), when I try to run it-I also don't know if it compatible with Win2k or not, or if I'm supposed to loading some file into it, for it to run correctly. Anyone who's gotten it up and running on their PC (or any MDT software) please drop me a line.

Thanks,
Mac

> What a joke, you are re-inventing the wheel, your software is a cheap
> copy of ARC780. And ARC780 is only USD 25.00 ...
no, I'm not.

I making a software for programming my 780xlt and if somebody else want to use it... why not.

Is something wrong with that?

> Did you ask the guys at Butel permission to use (aka steel) their
> layouts and idea's?

why not the guys from pozilla's winscan780? they have a tabbed grid too?

or from TrunkStar780's owner? he have a tabbed grid too?

or why not from Andy's application because he use a grid too?

Tell me how many of those applications allow you to save each bank in another data file? Witch of those applications allow you to make a project file using for each bank another data file? When I modify a freq. or a tag in one backup file I don't want to go in each file saved on the harddisk to modify just same thing...

I don't try to steel anything. I just try to make a better application to suit my needs.

I tried all those above mentioned applications. All have nice and good features, the only thing I didn't like it is all those applications have the a poor way to manage the data and lots and lots of options to manage the scanner. I want just the way around, lots of options to manage the data. from my point of view, you don't need more then 2 buttons to communicate with the scanner: first "read the data" and second "write the data".

This is what I need for my scanner and that is what I will do. I use both Linux and windows, so I will make a version for Linux and one for windows.

Except that engines must have radios on AAR channels so they
can run on other roads. Not to mention the need for multiple antennas
on the cab.

Railroads are very cheap when it comes to buying new equipment.

You are not going to get reliable 800 MHz trunking coverage on the
B&A line (for example) through the Berkshires in MA. The dispatchers
are already having trouble with dead spots.

Most of the 800-900 MHz activity is for automatic car readers (scanning devices) to record when a car enters and leaves a yard facility. Also, it can be used for remote signaling, sending train orders, locomotive location tracking, and two-way voice communications. Sadly, this entire system as I understand uses digital modulation instead of analog. Currently, there are no receivers available to decode it.

>
>
> Trunking may start to become common, especially in congested areas.
> NS and UP have experimented with it.

Yes, while talking with a Motorola rep, he told me that they plan on selling the UP a 160 MHz, trunked radio system, that would take roughly five years to phase in. UP has not decided on a format but LTR and Project 25 are being discussed, with the AAR taking notes. The FCC is very supportive of implementing trunking technology to the entire 150-174 MHz and 450-512 MHz bands.

Sincerely yours,

I've got one, too, never seen that. There is the keyboard lock, just
push the button that says "keylock" until it beeps.

Yes, this is an issue that concerns the RRs. However, moving to 800 MHz, or
to trunking, doesn't affect that since scanners are readily available which cover
that band and track trunking handoffs. It's more likely that the RR's will switch
to digital radios (like the APCO-25 radios used by police) to avoid scanners.

>decode it.

Exactly, all the activity in that band is data related, and relatively short range between more or less fixed points. When I said stay at VHF, I was refering to the voice radios. VHF has two big advantages from the RR's perspective, which are that it gives good coverage in rugged terrain and they already have a lot of channels allocated (91 of them, which could be doubled by switching to 12.5kHz channel spacing). There is no possibility of the RR's being allocated that many channels in any other band.

The modulation used in these systems is a mix of digital and analog, with the bulk of it being analog (the ATCS radios, for example, are analog). Receivers are available, but unless you know the data format being using there's no value to receiving it.

try to find out if the MDT in your area has gone crypto or not first.
if not .... try to find out what kind of MDT you have locally.
(MDTMON only works for outdated , unencrypted ,
mdt 4800 signals) many metro areas have now gone encrypted and / or
have shifted to one of the newer types of MDT
transmissions, that are not decoded by MDTMON.
Some people still get local MDT ...but very few as compared to a
decade ago.
This is also a common problem with those " surplus " MDTpolice
units found on ebay all the time. People buy them and go through a lot
of trouble to find out how to make them work ...all this to discover
that their local MDT transmissions were changed from that
old type of decoder (mdt-4800) ... many years ago.

you could (almost certainly) waste a LOT of time getting
MDTMON to work... (hint: get one of the DOS versions and
your problems will go away in a true dos window) ... AND
spend endless hours trying to get the slicer & / or software
scramble bits to work ... only to discover that you NEVER
had a chance in the first place. (because they have upgraded to
modern intercept resistant type transmissions.)

find one of the many " digital signal sounds " sites and compare the
sound of your local MDT signals to the types on the site to see if
your town is still using (highly unlikely) old mdt-4800 ... or some
of the newer types. In most metro areas , nowadays , MDT ,
Ricochet , Ram Mobitex ...etc. ... have scrambled all the " good
stuff " anyway. (scrambling can even be found on c and d layer
flex ..on some services.) IN the United States ... because
of new eavesdropping laws and interpretations of the same ...
ANY MDT , mobitex , Richochet ..etc ..listening would probably
be illegal , anymore. You never know when the " scanner
police " might kick in your door and arrest you for breaking the
scanner laws.

Source record: 54601

Hi folks,

I've decided to not post these up on ebay after all.

I have a Pro-51 in very nice condition, rarely used - never taken out of the house. Date code 7A4. Yes, you can get "extras" on this via the service mode of the rig. Look around, you'll find it! No manual or box, comes with the original antenna.

I also have a RS frequency counter in it's original box, used two or three times probably. Original paperwork, antenna, etc. included - REALLY like new.

$125 for both, makes a nice pair! Buyer to pay actual (or close to) shipping. Any method, you pick. I'll go by what the shipper's website estimates shipping costs at.

thanks!

The channels are locked-out, by default, until you program a frequency
in. At that point you have the option to lock-out the channel
manually.

If I'm not mistaken, there used to be low power services stuck in
between the existing AAR channels, though I don't know if they're
still there. CLearly, though, there could be no such services if the
splits on the existing AAR channels were narrowed as you suggest.

And while your points as regards VHF vs 800mhz in terrain are correct,
perhaps it should be pointed out that even with the disadvantage of
shorter range, rail service is perhaps better suited than many other
services to 800mhz, even on the longer haul lines since the intended
coverage area is pretty precisely defined... to an area not more than
a half mile either side of the ROW. I grant you, that we're dealing
with a goodly number of trunk sites., but even here, we're talking
about less of them than the average trunk system, (per area local
area, at least) since, again, the coverage area is limited to where
the tracks are.

Interesting thought, anyway.

Interesting.
Trunked systems at 800mhz are fairly simple, if massive to construct,
and range of systems is obviously a design consideration. The dynamics
involved with moving that system to 160mhz and it's range/watt ratio
would be err.... interesting to say the least. Do-able, certainly...
but still...

I have a new in the box Yupiteru MVT - 7100 handheld scanner/receiver. I am original owner purchased from UK covers 100khz - 1650 mhz with no gaps. Brand new condition no marks at all. Unit has 1000 memory channels, search mode, and receives in NFM, WFM, USB, LSB, CW, and AM modes. Scans fast. Included are 4 rechargeable nicads and telescopic antenna, also manual and box(no ac adapter as it came from the UK) but does operate with 12 volt ac adapter,has dc cord, wrist strap, belt clip, and ear plug all unopened in box. This unit has the light mod completed allowing the light for the LCD and key pad to be toggled on and off via the key lock switch on side, allowing the light to be on as long as you like. Will sell for $200.00 or consider trade for one of the following models in excellent condition only, realistic pro-2045, or pro 2006, bearcat 800XLT, may consider bearcat 200xlt if in superior condition and unmodified. If interested respond via e-mail and we can talk.

> VOICE, not merely look for a specific cell phone. Makes things a little
> harder and slower, but it still works...

Are you speaking of satellite technology? If so,
NSA would have such but would be very limited
in sharing such information with law enforcement.
There are still tough restrictions on gathering intelligence
on US citizens within the US by the CIA, NSA or
the military intelligence agencies. See EO #12333
that was issued by President Reagan.

Yes there are spectrum analyzers that are linked
to computers that can isolate a particular individual.
And that can be useful if the bad guys are constantly
shifting cell phones. There are other technologies
that can be used to gather RF signal intelligence.
And anyone linked into the national backbone of
the internet can glean tons of information, most of
it being not that useful.

Should the FBI, or any other federal law enforcement
agency (which NSA is not), seek to investigate an individual
then they would need a warrant in order to place evidence
in front of the courts. Simple intelligence gathering may be
nice to see where the bad guys are up to, but then any
hobbyist could do the same (for the most part).
But to convict someone in court, having your surveillance
supervised by the court (i.e. a warrant) is very necessary.

And the rules of evidence have not gone away. All that has happened is that rules for how warrants work with respect to gathering evidence electronically have been updated to match the technology.

I read somewhere a while back that you should put the scanner on an
unused channel, have squelch turned all the way off, and back it off
to JUST where it gets rid of the static.

Problem is if i do that, it is always stopping on channels that aren't
really active

Interesting. Two systems with which I have experience are:

1 - Multi channel HF SSB voice and data confined to co-ax cables inside double screened buildings - Have a radiation lock like an airlock.

2 - High speed data communications system using fibre-optic links enclosed in flexible metallic shield and entirely contained in double screened buildings.

You did say EVERY form? I had never seen that word applied to Echelon.

One other thing, these systems were not designed to keep the information in; they were designed to keep interference out. I suppose a system designed to be secure from interception would be much more carefully constructed.

Dave

You directions are a little unclear--at least to me. Your formula for a 1/2 wave is okay,
but the center conductor radiator the length should be 1/2 of that for a quarter wave radiator. The braid would also need to be a quarter wave at the design
frequency. If you are attempting to feed a 1/2 vertical radiator, it will have an extremely
high feedpoint impedance, and needs a matching transformer to work with coax.

Is your half wave design of 3.019 for the entire length of the vertical dipole, braid and center
conductor, or just for the vertical element? It should be the total of both antenna elements.

The AEI tag readers use unlicensed low power (about 2 watt) transmitters in the
940 MHz range. The RF is used to activate the passive tags on the cars, and
read the reflected data returned from the tag. The tag site has a dedictated computer
and modem line, and automatically reports the consist to a remote location by telephone
line.

Most of the signal related stuff to replace the underground wiring between bungalows
will be spread spectrum.

Operating compatibility between foreign roads is a limiting factor for abandoning the traditional
AAR 160 MHz allocations in the immediate future.

: There are a few things that need to be said: First-There is a system
called
: "Echelon" this system is capable of receiving EVERY form of
communications.
: Second-The US dosen't spy on US citizens, but the NSA's Europe Echelon
: system does. We spy on them, they spy on us, and then we compair notes on
: each other.

And NSA has such a big manpower shortage that
they missed a number of important messages within
the bin Laden organization. In the end, no matter how
good the system, it still comes down to having people.
Hell, the UK turns off half their cameras because they
had a budge crunch and had to let people go.

And anything that the NSA gathers can not be used
in a court of law. It is not lawfully gathered evidence.
It is simply intelligence. There is a difference.

>the tracks are.

Actually, no, RR's and similar systems (highway patrol, etc)(*) are peculiarly
badly suited to 800 MHz. The problem is that the coverage pattern from
a site is (more or less) circular, whereas RR's are long and skinny. To
implement an 800 MHz system with the same coverage level as the current
VHF system would require the RR's to install roughly 5 times as many
tower sites.

Interestingly, the RR's looked at PCS cell phone systems (e.g. Sprint or
Nextel) until they discovered that in some difficult terrain areas you could
pretty much throw a rock out of the coverage area standing at the tower
base.

John

(* Texas, for this reason, equips their highway patrolmen with 800 MHz
portable radios to use in urban areas, and VHF mobiles in the cars to
use in rural areas).

I just have a question about the formula for the length of the antenna... If I get a length from the formula that is less than a foot.... like 6 inches or something like that, shouldn't the antenna be longer? I guess I'm j ust asking if it would be okay to double the length you get so that it isn't too short.

Well said Dave..... Michael Faraday must be rolling in his grave...lol

Curious though, when you consider that if all this alleged sophisticated equipment exists (at the level of infallibility claimed by its believers), they can't find one emaciated arab in an rf quiet area the world. Perhaps bin Laden has nothing more impressive than a portable Faraday cage... lol.

I have to wonder if this is not just another example of disinformation. Create the belief that a system so omnipotent exists, then let the wagging tongues do the rest. After all what's better?..spend billions on a system or thousands on creating the belief in a system.

I think Echelon belongs in the same drawer as " the Titanic is unsinkable", "Mankind cannot withstand speeds in excess of sound" and " Elvis is alive and well and living in Bolivia".
Cheers
Mal

169. room transmitter 20.00US shipped

I just purchased a used Scout 40 and am not sure if its working up to par is there any way to test it ??

I did key my kids Cobra microtalk 2 way radio from the other room and it does display the frequency of 462.564 but is not picking up anything else in the area.

It has the DB32 antenna on it

I do have access to signal generators, I did bring it to work today and monitored CW frequencies 100 MHz up to 1.5 GHz and it is accurate in that aspect but how low a power level should it be able to detect ?

Thanks

Irony about the R-3 is the fact it was premarketed to NASCAR fans who not only wanted audio reception but were promised FM-TV reception of in-car cams. Once released, it was discovered that the FM-TV mode was quietly deleted out of paranoia about infringing upon the Electronic Criminal Protection Act of 1986 & its' 199X update. It is now nothing more than an Icom Watchamn clone with a built in radio! Icom's legal department is famous for neutering good products in the name of potential legal liabilities. In this case, it was the "possible interception" of undercover video surveillance transmission signals widely used by police that caused the mode to be deleted. This deceptive scenario left a very bad taste in the mouths of NASCAR fans & the scanner world alike. I am not sure the Euro version receives FM-TV either. Can anyone confirm the European version does? If so, is it PAL or NTSC format? Oh the disgust!

I have also heard it eats batteries like Keith Richards shoots heroin!

for sale:

realistic htx 242 amateur 2 meter ham mobile radio
this unit has extended receive and transmit

It will transmit from 136mhz - 174 mhz
completely keyboard programmable
40 channels with scan
built in ctcss toneboard for tranmit and receive
has a call channel button to bring you directly to one of your
programmed channels
has high and low power 5 watts or 40 watts tx output
has DTMF tones to activate repeaters

comes with manual

Needs a microphone if you wish to transmit
but makes an excellent scanner
3 times as sensitive as any scanner with much more noise rejection
than any scanner on the market

90.00US includes insured shipping

paypal, certifed bank check or INTERNATIONAL postal check

thanks

They used to be in the 452 and 457 MHz areas, spaced 12.5 KHz apart from each other.

> the tracks are.

British Rail and SNCF, operate on trunked radio systems in the 208 MHz range, with excellent
coverage. They use passive wire antennas, cell towers near the right-of-way, and their own larger
towers near major rail yards, for seamless coverage. I believe that JR has a similar system in
place. Since the coverage is limited to 1 kilometer either side of the line, this allows them to use
directional antennas that allow for better reception and transmission of signals.

> but still...

Currently, the government of Ontario is converting their public safety band in the 138-144 MHz area
over to a Motorola ASTRO Omni-link trunking system. This system includes: Ministry of Transportation,
OPP, local agencies, and the possibility of GO Transit in Toronto. Testing has revealed much better
coverage than on 800 MHz and the officials are very pleased with the results so far.

Motorola is promoting their new VHF/UHF trunking systems as the best way to utilize the frequency
spectrum in 150-174 MHz, 450-512 MHz areas. The railroad industry is watching this technology very
closely.

Sincerely,

Hank,

I don't think that's at all possible, unless you have an
old transoceanic with a "Wave Magnet". :) You have to
go to the source ... that's why they named it the
scout. That's why i like the vibrate option. I go down
to the city hall .. look at the wanted posters while the scout
vibrates and stores the frequencies. I go back out to the car ..
hook up the AR8200 and let the scout tune the scanner
to my captured frequencies. if I don't pick anything up ..
I go back and scout the place out again. it's a cool toy.

I'm starting to think the marget is getting flooded with these. I have two now myself, one of which I bought a year ago and another (that needs some work) that was given to me a few months ago. I also have my original 2005 that I bought new right before they were gone. Anyone who was following these rigs back then recalls that it was unclear if the 2006, which was due out in a month or so, would still have cellular capabilites. In addition, no one really knew what GRE was going to do to the innards of the rig.

Personally, I think I'm going to ditch the 2006's (but I have to keep the 2005) in favor of a Uniden 780. It's the only receiver in the price range that, IMHO, holds a candle to the legacy of the 2004/2005/2006's. (I wasn't a fan of the 2035/2042)

You are correct. This method has always allowed momentary peaks of static or mobiles that barely make the trip to annoy the listener. Personally, on any rig I'm not real familiar with I turn the squelch to where I don't hear the static, then NOT back it off that couple of degrees. In fact, the only rigs I still back off are my (here I go again) 2005 and 2006's. Those were known for a generous squelch.

There's an STX on ebay right now, it's at $68 with no takers, so far.
I've programmed lots of STX's and they're nice radios. Yes, they do
trunking, as well as conventional channels. Some of them even have
encryption (DVP).

With so may people thinking Cell Phone monitoring is fun, I don't think
the PRO2006 market has become flooded yet. And by looking at the price
an 2006 goes for on eBay it is beyond belief.

John is correct, the 780XLT is about the only radio in the <$350 range
which comes close to the 2006. I have a 2006 and 780XLT. I also have
2 PRO2035's. Fine Radio for MilAir but the 780XLT is just a cut above.
The nice thing about the 2025's are that you can pick them up at a very
reasonable price.

O.K., so for all I know, this radio is simply used as a fancy scanner. (The radio does have incription, for whatever that's worth). Why would anyone want to pay $400.00 for this when they could buy a scanner instead?? Am I missing something here??

Avraam,

My email to you bounced. Looks like you worked hard
on the interface. Nice job. I suggest that you delete the leading
zeroes from the frequencies and right justify the frequency
column.

Leading zeroes make the frequencies more difficult to
read. You rarely (if ever) find a modern scanner
which represents fequencies using leading zeroes.

It's great news that you plan a version for Linux.
Consider using the Tk/Tcl scripting language. It's
much higher level than C and the resulting program
will work on Linux, BSD, Windows XP, Windows 98, MacOS X, etc.

I'm using Tcl/Tk for the new tk545 program I wrote
for the JRC NRD-545 shortwave receiver. It works
on all those platforms after the user installs the
free Tcl/Tk interpreter on his system.

See tk545 link on my web page for more info:

The existing AAR channels are spaced 15kHz apart; how would going to 12.5kHz
spacing double the number? Do you mean 7.5kHz? Is such close spacing even
practical?

Is there really a perceived shortage of available channels, except perhaps
in local choke points like yards, small enough that 800MHz would work?

Andy,
I don't understand what do you mean.
"the way the tab is setup" you mean if I move the tabs for the tabbed grid from top to bottom or right or left will mean I creative?
(anyway thank you for the idea, I will make an option to move the tabs in any place you want)
I told you I make that application for *my scanner* and if somebody what to use it I give it away for free.
So, if I make an application for *my scanner*, I will make it in any way I want.

> Again, ARC780 is only USD 25.00. ARC780 can do all the things you
> described.

ARC780 is a great application. Is doing all the things I want but only in windows.
My application will do just a small amount of things but in windows and linux.

> But be my guest, waste your time...

Programming is my hobby and my job, I don't waste anything.

I'm using Delphi (for windows developing) and Kylix (for linux) both from
Borland.
Both are great. 95% from my applications in Delphi I been able to compile
them in Kylix for a linux version w/o any modifications.
Delphi is making native windows exe files and Kylix is making elf
executables for linux.

> See tk545 link on my web page for more info:

Does your city hall have a metal detector thru which everyone must pass? If so, have the security guards or anybody else said anything about the Scout? Just wondering what might happen with those guys if they see a more or less clandestine-type freq catcher.

"Monty Python" <radioman@thebigdial.com> wrote in message news:51ba3ucoq7mgi929c8c8793vjqgo7gq2tb@4ax.com...
Hank,

I don't think that's at all possible, unless you have an old transoceanic with a "Wave Magnet". :) You have to go to the source ... that's why they named it the scout. That's why i like the vibrate option. I go down to the city hall .. look at the wanted posters while the scout vibrates and stores the frequencies. I go back out to the car .. hook up the AR8200 and let the scout tune the scanner to my captured frequencies. if I don't pick anything up .. I go back and scout the place out again. it's a cool toy.

Well it took it for a ride in the car today through the city and still
nothing also I live in the city and there is a airport near by and the
incoming planes are very close and low coming by my house and still
nothing is regestering. As I am typing my daughter picked up the 900
MHz phone and made a call and nothing.
If I almost touch the phones antenna to the scouts antenna then it
registeres a 902 MHz signal.

Source record: 54580

In the most recent issue of QST the review of the Winradio 1550 indicated that the radio would go up to 1.6 Ghz as opposed to the published specs of 1.5 Ghz. I'd appreciate if any Winradio owners could confirm this stretch in frequency response. I'd like to get one and would get seriously excited if it would cover between 1.5 and 1.6.

thanks
Chris Anton

My local ps agencies use a motorola type II system, but, they seem to broadcast on both conventional 15x.xxx (conventional) and on 86x.xxx (trunking). At times, I pick up a transmission on the 15x.xxx and then the response from dispatch and following transmissions are on the trunking frequency.

So how do these systems work?? do the mobile units transmit on the conventional and the base re-transmitts on trunking?? Do I really need to have both the conventional and trunking freq's programmed in for these systems??

Many years ago (1978?), I had a Bearcat base scanner (250?).
It would count the # of transmissions received on a channel.

Anyone know what scanners do this today?

Thanks in advance...

Rich.

Who cares about laws? Remember that former president Kennedy enacted the law that the security services will stop all assassinations of foreign leaders. Hiding behind this law they have continued their dirty business! Clinton tried to assassinate Ossama some 3 years back! Remember?

Due to the recent sept 11 attack more and more intelligence gathering is being carried out in USA itself on most people. Not to mention the hundreds of bank employees who furnish information on people's accounts whenever they think their might suspicious movements of money. All this is done of course completely illegally!

Hi,

I have a new VR120 only 2 weeks old for a sale.
It's in perfect condition like something you would
expect from a new radio. Not a scratch on it.
It includes an operating manual, warranty card,
antenna, belt clip, and hand strap.

Asking $130 including shipping via US prioritiy mail.
If interested, please contact me by email
at nr6z@yahoo.com

I saw a report on news show about a year ago about "Echelon" and I could have swore that they said the system was located in Canada. The report also mentioned how sensitive the system is. I think it was that Pat Robertson news show, whether or not it was credible, I don't know, but it would not suprise me if there was such a system.

222. AFRTS TV channel 2 is where?

Newsgroup: rec.radio.scanner

This is not really about scanners or sw radios but...

I've asked this question before in several groups. No one answered.
Now that this is the "Internet" with many more people, maybe someone
is around that knows...

In the SF Bay Area, KTVU occupies TV channel 2. Has for decades.

Occasionally, apparently associated with the sunspot cycles, another TV
station muscles in and takes over, wiping out KTVU's signal completely.

I've seen the ABC logo, NBC's peacock and CBS's eye all within about two
hours of each other while this occurs. In addition, the last time it
happened, there was the military version of the PSA, directed to
servicemen, of course. And there was a few seconds of the letters
"AFRTS" before it faded.

This was picked up in the Evergreen area of San Jose, against the
foothills. KTVU's transmitter is NNW from here, approx 60 miles away,
atop Mt San Bruno.

Where is this "A-farts" station at? Guam? Alaska? Midway?

A USAF retiree says it is not in Korea...
KTVU does not know anything but they were interested in hearing about it.

Does anyone know?

Is it classified?

Could it be (shhh!) aliens? OR Soviet propaganda? Or...

I couldn't say where it is coming from but I can tell you who can. AFRTS has a website. Don't know about other frequencies, I didn't look but for shortwave, they list frequencies and location. Try there. I don't have their URL, a search should turn it up.

Only Uniden-made models have this feature. And unless you're willing to go through the used market, the only currently available model in the US which has this is the BC9000XLT (which won't be with us much longer either).

Check out my Scanner Features page for older models with this feature. Look under Channel Count:

http://www.strongsignals.net/access/content/features.html

I'll also mention that you might want to consider going with a model that can be computer interfaced and then use PC software which can give you this feature and a WHOLE lot more.

> In my opinion it would be a downgrade.

I agree, Jeff. While the PCR1000 is a nice receiver and can do some pretty nifty things when used with Pete Mahy's TalkPCR program, it is surely not in the same receiver class as the AR3000A. If one is willing to give up some performance for the sake of additional capabilities via computer control, then that's another story (and then you'd have to compare the PCR1000 software offerings against those available for the AR3000A to see where the benefits are).

Here's a listing of where they have off-air xmtrs but I can't find any
additional details.
http://www.afrts.osd.mil/facts/air.htm#top
Sounds like a good catch if its from any one of those locations!

One other possibility if that someone close to you has a sat receiver
and some lousy connectors and the signal is leaking. The reception will
repeat regularly if such is the case. I can watch my neighbor playing
Nintendo or viewing thru his VCR because of this problem :-)

-Bill

When you see distant stations coming in on Ch 2 it most commonly is due to "sporadic E" propagation. This occurs most frequently during the spring and summer. Signals are refracted by ionized "clouds" in the E Layer of the ionosphere. Distances are usually a few hundred miles up to about 1000 miles.

But at the peak of the sunspot cycle, another phenomena can occur. The maximum frequency refracted by the F Layer can get above 50 MHz during daylight hours. Since the F Layer is higher, distances can be several thousand miles. F Layer ionization is also more uniform than sporadic E, permitting muliple hops. (The sunspot peak was around 1999 or 2000 as I recall.)

I've never heard of AFRTS broadcasting on regular TV channels in the continental US. I would guess Guam or somewhere else in the Pacific.

Hi all.
I posted a message last week asking where to buy a 780xlt from. let me just say that the responce from you guys was great!! Thank you very much for all the help in searching for my new scanner....

But one question, the data cable that the bc780xlt uses to connect to the computer is a null modem?? one website was giving the datacalbe with the scanner. if its nothing special, i will just use an old db9 cable. can somebody tell me what type of cable it is?? thank you again for all your help!

Phil

Source record: 54513

There are a lot of PD/FD/EMS and other users of trunking systems that wish they had their own portable for when they are off duty, and the city/county/state says they don't have the $$$ to let you have one. I've sold several trunking radio's to PD/FD/EMS personnel so they can have their own. Most of the jurisdictions have no problem programming them for their own people.

I have a new VR120 only 2 and 1/2 weeks old for a sale.
It's in perfect condition like something you would
expect from a new radio. Not a scratch on it.
It includes an operating manual, warranty card,
antenna, belt clip, and hand strap.

Asking $110 shipped via US prioritiy mail.
If interested, please contact me by email
at nr6z@yahoo.com

Version 1.0 of tk545 is now available at:

http://members.core.com/~parnass

tk545 is open source software designed to control
and program the JRC NRD-545 receiver. Programmed using Tcl/Tk,
it runs on Linux, Windows 98, Windows XP, and MacOS X.

(You must install the free Tcl/Tk interpreter prior to running
tk545. See web page or instructions.)

Exerimental version 1.0 includes several new features, e.g,.:

Analog flavor slide-rule type dial
Session History window tracks frequencies you've monitored
and permits you to return to them with a mouse click.
AM lock lamp.
Presets menu for quick tuning to WWV, CHU, etc.
...

I don't warrant the software, but it won't cost you anything.

PS - My NRD-545 is not fitted with the VHF/UHF option. If your
NRD-545 is equipped with this board and you try tk545, please
let me know if you experience any problems. Thanks!

Thanks!

All the Pacific stations are way over on the other sideof the pond.

There must be some very interesting upper atmospheric stuff going on
for such a signal to make it all the way here.

I suspect that what was baffling people who I've asked before was how
I could be picking up a low power signal so well. Probably could not
believe that a low power station could wipe out a near-megawatt local
station.

BTW, I called on AFRTS too and they didn't want to talk about it.Might
not have talked to the right person...

> One other possibility if that someone close to you has a sat receiver

There are no nearby satellite dishes. Besides, this started before
anyone could buy a dish, back when the first solid-state TV's were
just coming out.

It just occurred to me that this might be the best area for skip.

I've been around other places but have not heard as much on HF and have
never seen TV skip elsewhere. And I've heard of no one else
encountering it either. KTVU said that no one else had called
them about it.

Except that the vast majority of programming has moved to satellite.
I don't hear them on HF anymore. But there is also far more QRM of
late, too.

Channel 2 is still out there, though. Somewhere.

Thanks to "Your Friend Bill", I got to the AFRTS page listing TV station
locations: Australia, Okinawa, Marshall Is., S. Korea. But Korea is said
to be on another channel.

Must be some very interesting stuff going on in the upper atmosphere
to bring in enough signal to wipe out the local station...

Thanks. It is not much help, unfortunately. But "Your Friend Bill"
sent a page that seems to be hidden or not part of the tree with
info on locations, though not channels.

Seems all the possible locations are spread out along the western
Pacific rim, from Japan to Australia.

It seems likely that it is a Rim station, since the signal comes in
usually well after noon, sometimes remaining until after sunset,
local time. THat's usually in the summer, but it sometimes occurs
at other times, ie, in January, as well.

The AFRTS TV stations are said to be low powered. I suspect that
was what had some people baffled before, including the AFRTS people
I spoke with. (Presuming it's impossible, they refuse to answer?)

And what kind of upper atmosphere conditions would cause a low power
station to completely wipe out a near-megawatt local? I would suspect
that being in this location helps, too. I can pick up stuff here that I
cannot hear elsewhere, even with the increasing QRM from power, cable,
phone and neighbours' computers and games.

BTW, KTVU said that no one else had called them about it. ANd no one
else I've talked to has ever seen it, either.

: >There are still tough restrictions on gathering intelligence
: >on US citizens within the US by the CIA, NSA or
: >the military intelligence agencies. See EO #12333
: >that was issued by President Reagan.
:
: Who cares about laws? Remember that former president Kennedy enacted
: the law that the security services will stop all assassinations of
: foreign leaders. Hiding behind this law they have continued their
: dirty business! Clinton tried to assassinate Ossama some 3 years back!
: Remember?
:
: Due to the recent sept 11 attack more and more intelligence gathering
: is being carried out in USA itself on most people. Not to mention the
: hundreds of bank employees who furnish information on people's
: accounts whenever they think their might suspicious movements of
: money. All this is done of course completely illegally!

Law enforcement can gather intelligence on US citizens.
The NSA and the CIA, as well as the military intelligence
community, are far more limited, per EO#12333. Nor
are they allowed to contract private investigators to do
so. The only military intelligence folks gathering on US
citizens are some within the National Guard who are
assisting the Drug Enforcement activities of the police.

Now when the feds start putting together a national
database that has all of your phone calls, email, court
records, job history, every comment you have ever
made and so forth, I might start to be concerned.

I tried to search any available possibilities and all I came up with is
that Marianas/Kwajelin uses 3 and 9. In any case it sounds like a rare
catch even if its unIDable.
The VHF world has been abuzz in the past week about the BIG opening so I
guess anything is possible. From my location all I have been able to
weakly nab is the usual ch 3 from West Palm Beach and Venezuela that
normally come in here when the band opens.

These things do happen. I solidly copied channel 3 from Barbados (in the late 60s when they used channel 3) underneath my local station in Charlotte, NC. They (Barbados) were 10 kw in those days. I had a photo...my ex-wife even knows where the ashes are where she burnt all of my old stuff :-)
I really tend to lean towards leakage from the neighbors satellite system these days when I receive rare TV signals like Nintendo, but they are easily proved out. The possibility of receiving such TV aren't excluded....6 meters (50 Mhz) can be very amazing...I worked a guy in Chile on a 6-meter Heathkit (2-5 watt) lunchbox on AM with a dipole hung up in the window.
>

Back in the old daze, most any QSL request to a distant TV station would cop a form-letter apologizing for 'sunspots' but some actually sent QSLs as if they were proud of their 'potential' coverage. Nowadays that may translate into whiner calls to the cable company or Circuit City.
An Elmer of mine was a ham and reporter for the local paper and got a 2 or 3 day series of coverage on the front page of the Charlotte paper when stations from Corpus Christi and Mexico were booming in solidly. I got my little mug on the front page with some other kids watching KRIS-TV from Corpus Christi.

Press Release

Date: 1/8/02

Title: UNIDEN DEBUTS NEW APCO 25 DIGITAL SCANNER MODELS

SubTitle: Electronics Giant to Sell Software to Customize Monitoring Experience

Synopsis: Uniden lifts the curtain on its long-anticipated APCO 25 digital scanner models.

Body: LAS VEGAS (January 8) - Uniden America Corporation today unveiled its new digital scanner line for 2002, including the consumer electronics leader's much-anticipated base and handheld APCO 25 digital scanning models. Speaking at CES, product manager Scott Carpenter showcased the new scanner products, underscoring the company's commitment to keeping its customers at the forefront of scanning technology. "Our retailers have been pushing us for a Uniden APCO 25 product for months, and our new BC250D handheld and our BC785D base/mobile scanning unit represent the fulfillment of our promise," Carpenter said. "With the ability to monitor conventional, trunked and APCO 25 conventional and trunked systems these models are state-of-the-art radio scanners. According to Uniden representatives, the Bearcat BC250D and the Bearcat BC785D models, which are slated to hit shelves in late 2002, offer 1,100 channels, 10 banks and a frequency

range of 25MHz - 1300MHz. The BC250D comprises all of the features of Uniden's market-leading BC780 XLT in a handheld model, plus adds APCO 25

capability and an additional 600 channels. Users of both models must purchase an APCO 25 card, the BCi25D, separately. "We're pleased to be bringing these great Bearcat APCO 25 units to market," Carpenter said. "We expect more big cities to migrate to the APCO 25 digital technology,

like Los Angeles did this past year, to ensure agency interoperability among police, fire, EMTs and the like - and we know news organizations, businesses and consumers will want to monitor their signals." Uniden officials stressed that APCO 25 digital scanning technology simply gives

users the ability to monitor the day-to-day activities and signals of standard city and government service departments - but in no way allows users to monitor encrypted signals from national and local security organizations. In a separate announcement Uniden also announced its plans to market its own easy-to-use scanner programming software, which it is demonstrating in its booth at this winter's annual Consumer

Electronics Show in Las Vegas. The software will allow the users of all Uniden scanners with data ports to easily program frequencies into the channels and banks of their scanner. About Uniden Uniden America Corporation, the North American subsidiary of Japan based Uniden Corporation, manufactures and markets wireless consumer electronic products including cordless telephones, business telecommunications systems, multimedia communications devices, scanner radios, CB radios, FRS, Marine radios and other wireless personal communications products. Based in Fort Worth, Texas, Uniden sells it products through dealers and

distributors throughout North, Central and South America. # # #

Radio Shack has quite a few models. PRO 2050/2052/2053(Base) Pro2067(Mobile) PRO 92/93/94 (Portable). The Radio Shack models are made by either Uniden or GRE and most have less features than their Uniden counterparts. For example, the
PRO 2052 has 1000 channels (20 banks of 50 channels) which is nice but you can't trunktrack and scan conventional frequencies at the same time. If you use the 2052 with a computer and WinScanRS software you can do both. Make sure you compare features and price between RS and Uniden. I have a Uniden BC9000XLT that I use for non trunked monitoring and a PRO 2052 that I use for trunktracking and computer control. Have Fun.

Currently, almost all the "signal related stuff" is ATCS 900MHz. Safetran has offered a spread spectrum system, but it doesn't seem to be widely used yet, I don't know if it ever will be. The range of spread spectrum is not sufficient for most purposes (typically a wireline replacement (which would typically be wires on poles, not underground) features a base station ("BCP") handling signals, switches, track circuits, etc connected to remote radios ("MCP"s) in a 5 to 10 mile radius).

>The existing AAR channels are spaced 15kHz apart; how would going to 12.5kHz
>spacing double the number? Do you mean 7.5kHz? Is such close spacing even
>practical?

The existing channels are 25kHz wide (they're actually 30kHz in the VHF band, a historical oddity which has been an annoyance for ages (*)). The FCC has mandated that everyone move to channels that are 12.5kHz wide "soon". I was being imprecise in my wording, I should have said 12.5kHz wide channels, since VHF is the one band where the channel spacing & width differ.

What the RR's do is to overlap channels that are "half a channel" apart. That means you can't use two sequentially numbered channels at the same location - for instance you couldn't use ch 26 and ch 27 in the same city. However, you'd only have to go half as far away to start using ch 27 without interference, as you would to use ch 26 without interfering with the first guy.

My understanding is the new plan will feature channels on 7.5kHz spacing. I suspose they might use 6.25kHz spacing instead.

>Is there really a perceived shortage of available channels, except perhaps
>in local choke points like yards, small enough that 800MHz would work?

Yes, at places like Chicago where all the class ones, plus Amtrak, plus shortlines, plus belt rwys, all get together in the same place. The problem is that in those locations pretty much everyone has to talk to everyone else at some point, so they've all got to share a band. And it's not really practical to have one radio in one band for Chicago, say, and need a different one by the time you get to Waukegan.

The probable solution will be to use trunking at those "dense" points. Trunking gives about a 5 to 1 channel usage improvement - couple that with using narrow channels and there should be enough :-)

John

(* so effectively there's 5kHz unused in every VHF channel, since the radios actually make 25kHz wide signals in all bands).

This was found on a web page a long time ago, now a broken link.

BC-895XLT Scanner to RS-232
Computer Interface
The interface is a 5-pin PCB header (.025" square pins on 0.1" centers).
The mating socket is standard (RadioShack.com's Cat# 910-1471 is 25 cents,
plus 24 cents for 3 contacts), but a segment cut out of a DIP socket will
work just as well.

The pinout is symmetric, with pins 1&5 (the outer ones) carrying data in
(to the radio), 2&4 are data out (from the radio), and pin 3 is ground.

BC895 DB9 DB25
1 <= to radio 3 2
2 from radio => 2 3
3 <= ground => 5 7
(TR-CD-DSR) 4-1-6 20-8-6 *
(RTS-CTS) 7-8 4-5 *

* If you will be using a standard communication program, add the two sets
of jumpers in the RS-232 connector to simulate the normal control signals.

The comm protcol is half-duplex, 9600 baud, 8/N/1. Commands to the radio
should be terminated with a C/R only.

I think that there is a "hit count" feature included in the "Log"
function in Perry Joseph's Probe software running an Optocom or Opto-
board enhanced PRO-2005/6.

This depends on how they decide to do the frequency spacing. It's my understanding from what I have read from the FCC, they are favoring 7.5 KHz for the entire 150 - 174 MHz band; 6.25 KHz for 450 - 512 MHz; 12.5 KHz for the new 746 - 806 MHz band, and the existing 806 - 869 MHz, 935 - 940 MHz areas.

However, most scanners are not equipped to handle such narrow band spacing or decode digital
signals such as Project 25 modulation. Uniden, however, has announced the pending release of their new digital scanners that will decode Project 25 transmissions. See my post on this!

Sincerely,

294. UNIDEN DEBUTS NEW APCO 25 DIGITAL SCANNER MODELS

Newsgroup: rec.radio.scanner
Date: 2002-01-06 04:44:36 UTC
From: Ron Wilbanks <NYC6011@ameritech.net>
Message-ID: <3C37D64D.ED2DE11F@ameritech.net>
Source record: 54463
Cross-posted to: misc.transport.rail.americas,alt.radio.scanner,rec.radio.scanner

Press Release:

Synopsis: Uniden lifts the curtain on its long-anticipated APCO 25 digital scanner models.

Body: LAS VEGAS (January 8) ï¿½ Uniden America Corporation today unveiled its new digital scanner line for 2002, including the consumer electronics leaderï¿½s much-anticipated base and handheld APCO 25 digital scanning models. Speaking at CES, product manager Scott Carpenter showcased the new scanner products, underscoring the companyï¿½s commitment to keeping its customers at the forefront of scanning technology. ï¿½Our retailers have been pushing us for a Uniden APCO 25 product for months, and our new BC250D handheld and our BC785D base/mobile scanning unit represent the fulfillment of our promise,ï¿½ Carpenter said. ï¿½With the ability to monitor conventional, trunked and APCO 25 conventional and trunked systems these models are state-of-the-art radio scanners. According to Uniden representatives, the Bearcat BC250D and the Bearcat BC785D models, which are slated to hit shelves in late 2002, offer 1,100 channels, 10 banks and a frequency

range of 25MHz ï¿½ 1300MHz. The BC250D comprises all of the features of Unidenï¿½s market-leading BC780 XLT in a handheld model, plus adds APCO 25

capability and an additional 600 channels. Users of both models must purchase an APCO 25 card, the BCi25D, separately. ï¿½Weï¿½re pleased to be bringing these great Bearcat APCO 25 units to market,ï¿½ Carpenter said. ï¿½We expect more big cities to migrate to the APCO 25 digital technology,

like Los Angeles did this past year, to ensure agency interoperability among police, fire, EMTs and the like ï¿½ and we know news organizations, businesses and consumers will want to monitor their signals.ï¿½ Uniden officials stressed that APCO 25 digital scanning technology simply gives

users the ability to monitor the day-to-day activities and signals of standard city and government service departments ï¿½ but in no way allows users to monitor encrypted signals from national and local security organizations. In a separate announcement Uniden also announced its plans to market its own easy-to-use scanner programming software, which it is demonstrating in its booth at this winterï¿½s annual Consumer Electronics Show in Las Vegas. The software will allow the users of all Uniden scanners with data ports to easily program frequencies into the channels and banks of their scanner. About Uniden Uniden America Corporation, the North American subsidiary of Japan based Uniden Corporation, manufactures and markets wireless consumer electronic products including cordless telephones, business telecommunications

systems, multimedia communications devices, scanner radios, CB radios, FRS, Marine radios and other wireless personal communications products. Based in Fort Worth, Texas, Uniden sells it products through dealers and

distributors throughout North, Central and South America. # # #

Great News!

Sincerely,

Ron

Mine either. Sign up with Giganews for a "three day trial" - they have
it. Then you can cancel and pay nothing, or keep their service for $7.95
a month. Note, I'm not affiliated with them, that's just the company I'm
going with at the end of Feb when Comcast loses it's @home usenet feeds
(since Comcast isn't going to provide their own usenet servers).

Not correct.

A null modem cable crosses the data send and the data receive (and other) connections.

You would use it to connect two LIKE devices (two DTE devices or two DCE devices).

OK, I generally know what to do with these files, however I am noticing a problem for myself.. I know what .RAR files are, but what is up with the rest of those? .PAR, .Sxx, .txx, etc... Are these all uncompressed with different programs? If so, why would you bother doing that? Perhaps it's a new compression program I am unfamiliar with... Any extraction help here would be greatly appreciated!

I do believe you a bit off on your information Ron. In fact Sir, I care about laws.

Gerald Ford sign the document not Kennedy. And Osama is NOT the head of any country so that law does not apply to him.

The CIA works primarily in foreign intelligence and are forbidden by federal law to operate within the USA, that goes to the FBI. NSA is another story. Clinton had an open hand to go get Osama but got cold feet in 1998.

I had to eliminate all but "2" cross post newsgroups. I don't cross post to newsgroups that are not related to the subject newsgroup.

Watch and see how quickly these "standard city and government service
departments" WILL encrypt their routine communications.

If anyone complains, they will be told "It's being done for SECURITY purposes."
Who can argue with that?

Don't believe me. Watch and see. Anyone want to place a small wager?

Sorry but RadioShack no longer has any handheld with MilAir Coverage.
RadioShack did have a good handheld that would cover MilAir, that was
the PRO-26. If you look on eBay you might be able to find a used one.

The only scanner RadioShack currently has with MilAir is the PRO-2052,
however that is a base and not handheld.

With the APCO-25 scanner coming out, I've been told that here in my local area the system will go into a encrypted mode. They say to many bad guys will have the scanner so they need to hide the comms from them. What ever happened to the tax payers right to now what his/her local government is doing. I know that the whole county here is on APCO-25, I aways ask is the trash dept now classfied along with the road crew and others that we had to spend millions on the new system. I think it's just the ego of some of these places using APCO-25 to keep john-doe in the dark. Just my 2 cents....

> them about it.

I lived in Sacramento for 22+ years and would get skip on channel 3 from other states that totally wiped out our LOCAL channel 3 IF I turned my tv antenna towards the skip. I was born and raised in Fresno and would get skip often on channels 2, 3, 4, 5, and 6, from North Dakota, South Dakota, Midland Texas, Oklahoma, Mexico (the country), Canada, and several other places. Even can get a GOOD signal from skip using rabbit ears here in Fresno.

This area is also covered with low-powered stations. Using an outdoor antenna, these signals come in from many miles away. I have had stations tell me that I shouldn't be able to pick up their signal even though I get it snow free.

While living in Elk Grove (just south of Sacramento), I picked up a NEW channel - channel 50 from Santa Rosa - their test pattern, and it had their phone number on it. I phoned and spoke to the engineer. He told me that I could NOT be receiving the station because they were NOT on the air! I read the test pattern to him. He couldn't understand how I could be picking it up so he asked for my phone number. He phoned back a while later and said that I was picking up the signal from Santa Rosa, California, OFF THEIR DUMMY LOAD. They weren't even on the air and I was watching it from about 60 or so miles away!

I agree with you. The benefit of the peoples' ability to know what the gov't is doing surpasses the benefit of hiding comms from a few criminals. It's like civilian review of police. The police (military, too) must be accountable to the people. Anything else results in a police state. Encrypting comms supresses civilian review and is one more step toward a police state.

Press Release

Date: 1/8/02

Title: UNIDEN DEBUTS NEW APCO 25 DIGITAL SCANNER MODELS

SubTitle: Electronics Giant to Sell Software to Customize Monitoring Experience

Synopsis: Uniden lifts the curtain on its long-anticipated APCO 25 digital scanner models.

Body: LAS VEGAS (January 8) - Uniden America Corporation today unveiled its new digital scanner line for 2002, including the consumer electronics leader's much-anticipated base and handheld APCO 25 digital scanning models. Speaking at CES, product manager Scott Carpenter showcased the new scanner products, underscoring the company's commitment to keeping its customers at the forefront of scanning technology. "Our retailers have been pushing us for a Uniden APCO 25 product for months, and our new BC250D handheld and our BC785D base/mobile scanning unit represent the fulfillment of our promise," Carpenter said. "With the ability to monitor conventional, trunked and APCO 25 conventional and trunked systems these models are state-of-the-art radio scanners. According to Uniden representatives, the Bearcat BC250D and the Bearcat BC785D models, which are slated to hit shelves in late 2002, offer 1,100 channels, 10 banks and a frequency range of 25MHz - 1300MHz. The BC250D comprises all of the features of Uniden's market-leading BC780 XLT in a handheld model, plus adds APCO 25 capability and an additional 600 channels. Users of both models must purchase an APCO 25 card, the BCi25D, separately. "We're pleased to be bringing these great Bearcat APCO 25 units to market," Carpenter said. "We expect more big cities to migrate to the APCO 25 digital technology, like Los Angeles did this past year, to ensure agency interoperability among police, fire, EMTs and the like - and we know news organizations, businesses and consumers will want to monitor their signals." Uniden officials stressed that APCO 25 digital scanning technology simply gives users the ability to monitor the day-to-day activities and signals of standard city and government service departments - but in no way allows users to monitor encrypted signals from national and local security organizations. In a separate announcement Uniden also announced its plans to market its own easy-to-use scanner programming software, which it is demonstrating in its booth at this winter's annual Consumer Electronics Show in Las Vegas. The software will allow the users of all Uniden scanners with data ports to easily program frequencies into the channels and banks of their scanner. About Uniden Uniden America

Corporation, the North American subsidiary of Japan based Uniden Corporation, manufactures and markets wireless consumer electronic products including cordless telephones, business telecommunications systems, multimedia communications devices, scanner radios, CB radios, FRS, Marine radios and other wireless personal communications products. Based in Fort Worth, Texas, Uniden sells it products through dealers and distributors throughout North, Central and South America. # # #

328. BC 780XLT Help

Newsgroup: rec.radio.scanner
Date: 2002-01-06 18:03:15 UTC
From: Go_Slow <slow_go@hotmail.com>
Message-ID: <Xns918E7939F3C7Aslowgohotmailcom@216.166.71.230>
Source record: 54348

I have used a RS PRO-90 for some time with few problems.
I recently purchased a BC780XLT and just can't get this
thing to scan.

It receives fine when on a channel manually. I programmed
in several Air freq's in BANK 3. I deselected all the
other banks. It just sits on a 101 and will not scan.
The bank 3 indicator is flashing, the channel '101' stays
and it never scans. It does say 'scan' on the screen.

No hold, no L/O's.

The PRO-90 next to it is scanning and working, so I know
the freq's are active.

OK. Yes I read the manual. I know I am doing something
pretty basic that is wrong.

Any ideas ?

Thanks ahead for the help.

Before you junk it, send yours my way. I'll put it up on EBay and get $250-ish from those in "non-digital" land who won't want to spend $400+ on a new scanner.

BC210XLT's are still being EBay'ed for $50+ so why would you think the 780XLT would be "junk"?

- Rob

PS UNIDEN NEVER SAID THEY WOULD HAVE A BOARD FOR THE 780!

They use geo-stationary satellites for comms now -- no way you can scan
that. You may still hear the VHF freq's in use periodically when a new
replacement Soyuz is sent up every 6 months.

AMATEUR RADIO NEWSLINE(tm) REPORT #1273 - January 4 2002
(Total Running Time with RAIN Promo: 24:48)

==========

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Three methods of delivery are available: Streaming audio using RealAudio, FTP RealAudio, FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast. On site free FTP Downloads are available at our site by clicking on the newscast number at the top of the page.

de
The Newsline Production Team

==========

Amateur Radio Newsline report number 1273 with a release date of Friday, January 4 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A “V-E team” finds a way to test kids in one of the most remote regions of the country and the FCC again says no to expanding PRB-. These stories are first on Amateur Radio Newsline report number 1273 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO TESTING REACHES WHITE MOUNTAIN ALASKA

Ham radio examinations have finally come to one of the remotest areas of the nation. This, after a team of examiners from the W5YI VEC perform a fly-in examination session in White Mountain Alaska. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the details:

--

White Mountain is a remote fishing village in the far North-West of Alaska. It’s major claim to fame is that its the next to the last checkpoint for the famed Iditarod dog sled race. And it wanted someone to come in and give ham

radio exams.

The closest big city is Nome. White Mountain is only about sixty miles from Nome but its over some rather treacherous terrain. There are no roads in or out and all supplies to White Mountain have to be delivered by plane or boat.

But White Mountain does ham a ham radio operator for its mayor. He is reindeer farmer Tom Gray KL0CQ. And one of its school board members is Eric Morris KL7HT. Both will tell you that a temperature of minus 40 degrees Fahrenheit and a wind-chill factor of minus 100 degrees is not uncommon in winter. These were the conditions faced by a four member W5YI VEC test team when it chartered a plane and flew in on December 11th to administer exams to four adults and fourteen youngsters who were determined to make ham radio a part of their life.

The trip which cost $800 for the flight alone was sponsored by the Seward Peninsula Amateur Radio Club. Braving the weather were examiners Ramon Gandia AL7X, Michael Nurse KL7UJ, Scott Webber AL7RJ and Thomas Busch NL7H. Al four are from Nome. Most of those to be tested came from the Bearing Strait School District’s only inland school. They had all been studying for their Amateur license as part of a search and rescue course. Neither the applicant or the VE team were disappointed. All eighteen passed the Technician class exam.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

Those involved in ham radio testing are keenly aware of the problems faced by remote areas of Alaska. At last July’s VEC Conference in Gettysburg Pennsylvania Jim Wiley KL7CC told the group that many applicants in Alaska are denied n Amateur Radio license exam due to the inaccessibility of their locations or the high cost of travel in that state. (W5YI)

**

HAM RADIO AND THE LAW: FCC SAYS NO ON PRB-1 EXPANSION REQUEST

Ham radio has lost yet another battle against deed restrictions, but the war is not over yet. At least that’s what the ARRL appears to be saying in a bulletin that describes the latest skirmish with the FCC over this politically volatile issue.

In the latest round, the FCC has affirmed a November 2000 staff-level decision that declined to include privately imposed deed covenants, conditions and restrictions under the limited federal preemption known as PRB-1. That’s the federal government policy requires municipalities to ''reasonably accommodate'' amateur communication in antenna-related zoning and regulation.

The ARRL last year appealed to have the full FCC review the earlier denial. The Commission turned down the League's Application for Review December 18 in a Memorandum Opinion and Order released December 26. As a result, it now looks as if the ARRL will bypass any further dealings on this issue with the FCC and will look for congressional relief instead.

The FCC itself even hinted that Congressional action by the ham community might be a next logical step. Its memorandum, opinion and order of dismissal did note that if Congress were to see fit to enact a statutory directive mandating the expansion of the FCC’s reasonable accommodation policy that the Commission would expeditiously act to fulfill its obligation there under. Translated: If Congress tells the FCC to include deed restrictions under the provisions of PRB-1, it will be more than happy to do so. (ARRL)

HAM RADIO IN SPACE: PROJECT JJ - HE EAGLE HAS LANDED

AMSAT-NA's newest satellite project, known as Project JJ for the past year, now has a new and official name. This, as AMSAT North America President Robin Haighton, VE3FRH, announces that effective January 1, 2002, the satellite will officially be known as 'Eagle'.

The name Eagle was submitted by Bill Allen, W7US, of Tucson, Arizona. It was selected from a list of forty-five names submitted by twenty-nine satellite operators.

For his winning suggestion, W7US will receive a free dinner at the annual AMSAT dinner held during the Dayton Hamvention. We will have more ham radio space related news later on in this weeks Amateur Radio Newsline report. (AMSAT-NA, ANS)

**

BREAK 1

Welcoming in the new year with ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the N7VGS repeater serving the Salt River Star Valley Wyoming and congratulating 13 year old Devin Cassity, on becoming the youngest ham in South West Wyoming. Devin is now KD7PHN.

EMERGENCY PREPAREDNESS: NORTHERN CAL TOWN CHOOSES HAM RADIO

Ham radio started the year with some very positive public exposure in the Los Angeles Times. The January 1st edition featured an in depth article about a Northern California town that will tap into older technology to prepare for future emergencies.

Worried that a disaster will knock out e-mail and cell phones, Los Altos Hills has decided to turn to its local ham radio community and make it the primary back-up to normal disaster preparedness communications. And as you might expect, the hams are more than ready to oblige

The complete story can be read at the Los Angeles Times website. The complex URL is http://www.latimes.com/news/local/la-000000203jan01.story. (Highlighted by ARNewsline™)

**

AMERICA AT WAR: POPCOMM COLUMNISTS SAYS “DONT TURN THE OTHER CHEEK”

Popular Communications writer Eric Force has some strong words that are obviously aimed at the pacifists who oppose the United States military retaliation against Osuma bin Laden and his al-Quida terrorist network. As a response to those he calls the “do-gooders of the world” who promote turning the other cheek, Force says to look, really look at the attack that brought down New York City’s World Trade Center twin towers. He then says that it could have struck a lot closer to them.

Force says and we quote: “Consider that it could have been you, your mom, dad, brother, sister other relative or a close friend in those planes and buildings who were terrorized, murdered and buried in the rubble.” He adds that just thinking about the incomprehensible terror, suffering and losses incurred by innocent human beings a the cowardly hands of international thugs continues to tear at his heart.

Force has dedicated his latest I-Waves column to the sights and sounds of September 11th that are available on the Internet and to the victims of the tragedy. Its a very compelling article. You can find it starting on page 66 of the January edition of Popular Communications Magazine that’s on newsstands right now. (PopComm)

**

AMERICA AT WAR: FEDS TO AID NYC TV STATION REBUILD

New York television stations will be getting federal help rebuilding transmitters that were destroyed in the September 11th terrorist attack on the World Trade Center. A total of ten New York area stations will receive eight point two million to offset the thirty million to forty million dollar price tag for purchasing and
constructing a new transmission facility.

According to the Broadcasting and Cable newsletter, Senator Charles Schumer managed to secure the funding as addition to emergency aid appropriation for victims of the attacks. As previously reported, there is some speculation that the replacement transmitting facility could be a 1500 to 2000 foot high stand-alone tower constructed near the former site of the Twin Towers. (Broadcasting & Cable)

**

ENFORCEMENT: NAL CANCELED

The FCC has canceled a proposed ten thousand dollar fine that it had issued to Jeffrey Alan Pettrey, This, for his apparent violation of Section 301 of the Communications Act involving operation of an unlicensed radio transmitter.

Back on July 30, 2001, the District Director of the Commission's Columbia, Maryland Field Office issued a Notice of Apparent Liability for Forfeiture in the amount of $10,000 to Pettrey for the infraction. Pettrey filed a response to the N-A-L on August 7, 2001 accompanied by documentation regarding his

inability to pay the proposed fine. After reviewing Pettrey's response, the FCC conclude that cancellation of the proposed $10,000 forfeiture is warranted based on Pettrey’s inability to pay. (FCC)

**

ENFORCEMENT: FCC CANCELS CONVICTED HAMS LICENSE

The FCC has canceled the Amateur license of Kenneth P. Kelly, WT2FBI, of Greensboro North Carolina after Kelly failed to show up for a re-examination. But at the time of the FCC retest order Kelly was otherwise occupied. He was fighting criminal charges in relation to a jamming case in Ohio. We have this report:

--
On November 30, 2001, Kenneth Kelly, the ex-WT2FBI was sentenced to 5 years probation by the Judge H. J. Bressler in a Butler County Ohio court. He had previously been indicted on a 4 th degree felony charge of disrupting public service by his jamming and talking on the Middletown Ohio police radio system.

At his hearing, Kelly agreed to a plea bargain. He admitted his guilt to a reduced charge attempted disrupting public services. At the time the FCC pulled his ham radio ticket Kelly was being held in the Butler County Ohio Jail pending sentencing.

By way of background, a person later proven to be Kelly was first noticed on the Middletown police radio channel the third week of July 2001. Initially the police dispatch radio system was not recording him but that was soon remedied by city radio technicians. After several days of taping, it was observed that the voice on the police radio was similar to one heard on the local 2 meter Amateur frequencies.

Several members of the Dial Radio Club then assisted police by monitoring and taping Kelly on the 2 meter band. Tapes from 2 meters and from the police were then voice printed the aid of computers to check similarities. Dial club members also tried to direction find and locate the signal both on 2 meters and on the police channel.

Through some luck, detectives working with a metro housing police officer and discovered that Kelly was now living in their jurisdiction. After they interviewed him, they felt that he was the person interfering. As the investigation progressed, he admitted to detectives that he may have accidentally transmitted on their frequency by accident. He claimed that his signal may have been mixing with an FM broadcast station and another ham repeater.

But Police did not believe it was accidental, because he was taped trying to talk directly to the police dispatcher and the cars. Later Kelly did admit his guilt and entered into the plea bargain. Now sentence has been passed by both the local court and the FCC.

For the Amateur Radio Newsline, I’m Burt Hicks, WB6MQV, reporting.

--

When he was finally caught Kelly had a Yaesu VX-5 hand held in his possession that had been modified to transmit out of band. The assistance of the Dial Radio Club members is credited with helping to solve this case.

Note: Information and documents from the case can be obtained from the Butler County Ohio Clerk's office or online at: http://www.butlercountyclerk.org/ Click on Butler County Court Records Search. Then enter Kenneth Kelly. (FCC, Dial ARC, others)

**

ENFORCEMENT: MITNICK TO FIGHT TO KEEP HIS HAM LICENSE

Another ham who appears to be getting ready to do battle with the FCC is former computer hacker turned talk show host Kevin David Mitnick, N6NHG. Amateur Radio Newsline’s Bill Pasternak, WA6ITF has the latest:

--

As reported last week, the FCC is challenging Kevin David Mitnick's request to renew his ham radio license. The agency claims that his criminal background raises a substantial and material question of fact as to whether Mitnick possesses the requisite character qualifications to be and remain a commission licensee.

Now, N6NHG has told the U-K Newspaper the Register: "It's just another example of them trying to harass me. Now I've got to spend money to keep a ham license."

Mitnick insists that he has totally abandoned his former ways. The Register article notes that that he was recently called to testify before Congress on federal computer security matters. Also that he spent two days briefing the U-S Commission on National Security on these issues. Mitnick tells the Register that he cannot understand why the government is now questioning his character.

Mitnick is currently the host of the radio program called The Dark Side of the Internet. It airs in the Los Angeles area from 5 to 7 a.m. Sunday mornings over radio station KFI 640 AM. And in a recent appearance on Coast to Coast A-M hosted by Art Bell, W6OBB, Mitnick said that he is hoping for a career in computer security once his term of supervised release from prison has been completed.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.

--

The complete Register story and interview with Mitnick is on the web at a rather long and complex U-R-L. You will find it at http://www.theregister.co.uk/content/55/23494.html (Adapted from the Register)

HAM RADIO BUSINESS: AMATEUR RADIO TRADER CEASES PUBLICATION

Ham radio Internet auction sites may be responsible for a twice a month ham radio equipment sales magazine going away. This, after Amateur Radio Trader magazine announces that it has ceased publication.

According to Editor Barbara Patterson, KF4MMV, the Amateur Radio Trader was no longer a viable product. She says that the firm will be redirecting its resources into other areas.

Meantime, the company has also pulled its amateuradiotrader.com website off line. But unlike other publications which have gone under, in this case subscribers are being reimbursed for any outstanding issues. In addition to handling buy and sell ads, Amateur Radio Trader also donated page space to advertising the annual Newsline Young Ham of the Year award. (ARNewsline™)

**

HAM RADIO HERITAGE: MAKING WCC A PART OF THE FUTURE

A ham is campaigning to preserve part of radios past and have it become a part of the future. This as Lewis Masson, K1LJ-S, says that the town of Chatham Massachusetts should convert the site of radio station WCC into an Amateur Radio station along with a training curriculum to teach the kids in the area about communications technology.

WCC is one of the original Marconi Marine Radio Stations. Masson is an ex-marine telex operator at WCC. The site was recently turned over to the town of Chatham and Masson believes it is important to preserve the operations building as an operating amateur radio station and keep the hotel building as a museum to preserve and display memorabilia.

Masson says over the Internet that he has formed a committee to work on this project and that they are looking for nationwide support for this campaign. If preserving the past as an investment in the future is of interest to you, please contact K1LJS by e-mail to lemasson@juno.com. (Internet)

**

SPECIAL EVENTS: HAM RADIO UNIVERSITY 2002

A reminder the third annual Ham Radio University event takes place on January 20, 2002. Location is the Babylon Long Island New York Town Hall Annex with the doors opening at 9 a-m Eastern time.

Ham Radio University is a day of education about Amateur Radio. This there will be twenty, one-hour presentations with special forums geared to the non-ham as well as the experienced Amateur Radio operator. The focus will be "hands on" with many demonstrations. Besides the forums, there will be tables set up with information about the different groups, ham radio classes, exam session schedules, public service and other activities.

For more information about Ham Radio University, please contact its Chairman Phil Lewis N2MUN by e-mail to n2mun@optonline.net. You can also get in touch with ARRL New York and Long Island Section Manager, George Tranos N2GA by e-mail to n2ga@arrl.org. Also check the Ham Radio University website for a full list of forums, directions and talk-in information. Its in cyberspace at www.arrlhudson.org/nli/hru2002.htm (N2DO)

**

HAM RADIO RECORDS: BEST OF THE WEST AND VHF CONTEST HONOR ROLLS

Tim Marek, K7XC, says that he has updated W6 / W7 & "Best In The West" VHF Contest Honor Rolls. They are now available at the following web sites.

http://k7xc.tripod.com/VHF_Records/index.html s the stand alone records page. http://k7xc.tripod.com/K7XCweaksignal/ is where individual links can be found to each contest. (VHF Reflector)

**

HAM RADIO SCIENCE: NEW 6 METER PROPAGATION BEACON IN WASHINGTON STATE

Rich Ewing, KO7N reports over the VHF Reflector that Bruce Shurtz, W7BAS, has installed a propagation beacon in gridsquare CN87TG near Kennmore Washington. It operates on 50.069 MHz putting out 10 watts to a 5 element yagi pointing 90 degrees. The beacon is operational 24 hours a day, seven days a week. QSN reports go to W7BAS, at his callbook address. (VHF Reflector)

**

HAM RADIO IN SPACE: VERY FEW LAUNCHES

Peter Guezlow, DB2OS, reported that 2001 has turned out to be the slowest year for space launches in nearly 40 years. Ham radio or otherwise. According to DB2OS, only 58 flights reached orbit, and there was one complete failure.

Guezlow says that historians note that we must look back to 1963 to find a year that produced fewer launches. He says that in 2000 there were 82 launches to orbit plus three failures. By contrast the most productive year was 1984 when 129 launches delivered payloads into orbit.

But there is at least one bright note. Russia successfully placed five satellites into orbit recently after launching them aboard a Zenit rocket. The cargo rocket, carrying three Russian, one Moroccan and one Pakistani satellite, took off from the Baikonur space center in Kazakhstan. (AMSAT, ANS)

**

HAM RADIO IN SPACE: NEW INDIA WEBSITE

The AMSAT-India website has been officially launched recently by the government of India and the Department of Space. VU2POP says that you can check it out by taking your browser over to www.amsatindia.org. (ANS)

**

CONTESTS: HUNTING LIONS ON THE AIR

The 31st annual Hunting Lions in the Air contest will take place on the weekend January 12th to the 13th. The contest period will be 48 hours and will run from midnight UTC Friday night to midnight UTC Sunday night, and all hams are welcome to participate.

According to its sponsors, the objective of this operating event is to create and foster a spirit of international understanding and cooperation among radio amateurs and members of the Lions Clubs through the use of world-wide radio communication. The contest also commemorates the birthday of Melvin Jones, the founder of the Association of Lions Clubs who was born at Ft. Thomas, Arizona on January 13, 1879. (Q-News)

**

DX

In DX, word that the recently postponed Ducie Island Dxpedition is on again for March. Ducie Island became a DXCC entity last November and it immediately jumped to the top of the most wanted contact list. But rough seas scuttle the first attempt to put it on the air. (RSGB)

Meantime 6 meters continues to be the V-H-F D-X band of choice. On Monday December 31st, Kevin Bishop WB8XX, says that he started hearing O-H-1-X-T at 1300 U-T-C on a backscatter path. From then on until 1620 U-T-C he worked 8 new countries and over thirty new grids in Europe and Asia. (VHF Reflector)

**

STRANGE TECHNOLOGY: ARE CELLPHONES KILLING GHOSTS?

Now, from radio communications to the effect of radio communications on supernatural communications. This, as a British expert who has spent years researching the occult says that cellular and other mobile phones are killing off ghosts. Don Wilbanks KC5MFA has the details:

--

No, we are not kidding you. In fact, Tony Cornell, of the Society for Psychical Research, has told the London Sunday Express that reports of ghost

sightings started to decline when mobile phones were introduced 15 years ago.

According to Cornell, ghost sightings had remained consistent for centuries. In fact, until three years ago the society received one or two new ghost sighting reports every week. But with the introduction of mobile phones 15 years ago, ghost sightings began to decline to the point where they are not receiving any.

And why are there no longer any ghosts being observed? Apparently paranormal events, which many scientists attribute to unusual electrical activity, my be drowned out by the electronic noise produced by cellular telephones and text messaging pager transmitters. And according to the newspaper, the lack of ghost sightings could adversely impact on the nations economy. It says that haunted tourist attractions in Britain could be under threat if the number of cellphones continues to grow from the present figure of about 39 million now in use in the U-K.

Don Wilbanks, KC5MFA.

--

And all of this begs that one question be asked. If ghosts are the spirits of the dead, how can anything actually kill them? (Science Today)

So why is it that when my scanner is right next to a Motorola MTS2000 radio, and the Motorola is a police radio, both hearing the same frequencies, same channel, the Motorola has always a better signal receiving quality than the scanner? I know the Motorola has a better speaker and sound quality than a scanner, and it picks up better too. Why?

A pro-2006 off the used market like ebay. These units are the best scanners ever produced in the US. You can easily modify these for cellular coverage and lots of other things as well or buy a new scanner internationally if you want to pick up cell phones. (Gray market)
If you don't care about cell phones get the ICOM computer scanner domestic or the radio shack pro-2052

I'm getting all sorts of path errors, once I've installed the program.
Generally, if I hit 'ignore' the program will work. Any idea where the
path for Police Call is installed?

There are codes in the old Scannermaster guide. They might still be accurate. I'll see if the pages can be scanned and let you know.

If you get a programming cable, I also have a P93 file for the area that you might want.

I know where the program is installed. I installed it. :) For whatever reason, after asking for the word on page 9, I get an error about an invalid path. After entering any kind of search criteria, I get the message about invalid path. I click ignore, and get the results anyway.

Anyone else have some ideas why this is happening?

From: John <johnstinkyfinger@yahoo.com>
Message-ID: <4clh3u8vli10bcqlbphrg8g0aner10lk39@4ax.com>
Source record: 54383

I am in the market for a base scanner. Should i get the Pro-2052 or the BC895XLT? Both have what I want. Trunking and MilAir. Milair is mostly what I want but want the trunking as well. I have read one will only allow scanning either trunked or conventional. Both would be nice.

Thanks!

KC0LHJ

363. OLD vs. NEW Pro-2006/4 vs. PRO-2053/2

Those are police radios. You can't talk into a scanner.

this is an old police/fire/ems etc. radio since you'd get in trouble w/ the friendly FCC quickly it's little more then a scanner.

Actually cordless phones aren't illegal. The law states any transmission
that ends or begins from a wire can't be monitor but it has a specific
expection for cordless phones my guess is the cordless industry didn't pay
as much as the cellular does so they didnt' get their names one the guest
list back in '86 and '94

William unlike the Police Call books, the CD covers the whole USA.

I have it downloaded and burnt onto a cd already - can I look
up a freq for you?

I've been out of the scanner arena for a while. My question is are the new Radio Shack scanners (like the PRO-93, 94, 92) flash firmware programmable? With flash memory prices so low I cannot see them using a masked ROM part. If it is programmable can this be done by the end-user (like my Garmin GPS receiver)?

grunted out

>So why is it that when my scanner is right next to a Motorola MTS2000 radio,
>and the Motorola is a police radio, both hearing the same frequencies, same
>channel, the Motorola has always a better signal receiving quality than the
>scanner? I know the Motorola has a better speaker and sound quality than a
>scanner, and it picks up better too. Why?

Because the Motorola radio isn't designed to cover 10 different bands, so it's
receiving section can be designed better, for the ONE band it does cover.

FCC rules prohibit the sale of scanners that can be easily modified to receive cell frequencies. You will never see end-user flashing capability in scanners. The PRO-93 uses a one time programmable rom and the PRO-92 uses an EEPROM with no user access.

Same here, my ISP news server is notorious for low completion rate.
Maybe it will show up on someone's FTP.
As to format,
whether ISO, rar, ace, or whatever,
I have the appz to handle that if I could just get all the pieces.

All depends on what you want to listen to.

As solid receivers, for non-trunked, open squelch listening, the 2004 /5 /6 series can't be beat.

But compared to a 780, they are a bit antiquated...

I haven't seen one of these up close. The promo pics show a text
description of what is on a specific channel/freq. Can this be programmed
for all channels like this? For some reason I'm thinking it's a trunked
only feature, but I hope I'm wrong.

Thanks to whomever posted the RS parts phone number. You reminded me to order the parts I need to restore a 2006 I have here. I was surprised to find that they still have the keypads, top and bottom half of the chassis, and original antennas for this classic! I ordered a bottom,two antennas, and three (or five - I forget) keypads for under $60. Not bad!

That STX821 is an old trunking capable radio. For personnel use, it would
be useless to most people. It takes proprietary Motorola software and
interface cable to program it. That keypad is for trunking group and
channel changing. I'd recommend you donate it back to that dumpster....
that's about all its good for.

Is it safe to assume that now the BC785D will replace the current bc780xlt? Is it also safe to assume that the prices will be close? I couldn't find anything in the press release on this. Just wondering what you guys all thought. maybe you've heard more than me... or what i've 'read'. maybe i have to wait until Jan-08 to find out. thats the date of the press release!! oh well.

Hi,
I have 2 small problems with my application and I tried to find the solution on the internet but w/o any success.

1) how do you calculate the STEP?
2) programming the talk groups tags and IDs.

every time I try to send an IC (Set ID memory number) command I receive back NG.
example:
send: IC A A0 002512
receive: NG

what I'm doing wrong?

I updated the screenshots on my page, and right now only the thing is missing from the application is programming the groups IDs...

I'm not sure what the "Q" suffix indicates, (question, maybe?)
but if you're referring to the 780 alpha tag feature,
you can make it say whatever you want about any location,
regardless of what is programmed there, trunked or conventional.
There are two sections to the tag, a group label field and an individual
channel label field.
These can be designated as you desire, however,
using the group label field for several related channels is better
accommodated within the firmware.
Also the scrolling of letters using the keyboard is a rather tedious process,

so you definitely want to consider some computer interface software,
for this as well as juggling the positions and parameters (L/O, Delay, Data
Skip) of the different channel locations.

I am new to scanning and today I picked up a Pro-79 at RadioShack since it was the lowest priced one I could find and I wanted to see what these things were all about. It seems to work pretty good from what I can tell, although the manual that comes with it is kind of poor. Was this scanner worth the money, especially considering that I'm a newbie to scanners? Thanks in advance for your replies.

401. Re: Who thinks listening to Cordless phones is illegal

Newsgroup: rec.radio.scanner
Date: 2002-01-07 09:00:50 UTC
From: "M. Schneider" <markinokla@juno.com>
Message-ID: <vrd_7.20$ww3.18699@newsfeed.slurp.net>
Source record: 54421

Actually cordless phones ARE illegal. The exemption you refer to has been removed. When checking this out several months ago, I found that some websites still had the previous version of the law, which listed the cordless phone exemption. I found the updated law at the Cornell University Legal Information Institute website. Here is a portion of that previous post:

http://www4.law.cornell.edu/uscode/18/ch119.html

UNITED STATES CODE
TITLE 18 - CRIMES AND CRIMINAL PROCEDURE
PART I - CRIMES
CHAPTER 119 - WIRE AND ELECTRONIC COMMUNICATIONS INTERCEPTION AND INTERCEPTION OF ORAL COMMUNICATIONS

Sec. 2511. Interception and disclosure of wire, oral, or electronic communications prohibited

(1) Except as otherwise specifically provided in this chapter any person who -
(a) intentionally intercepts, endeavors to intercept, or procures any other person to intercept or endeavor to intercept, any wire, oral, or electronic communication;
(b) intentionally uses, endeavors to use, or procures any other person to use or endeavor to use any electronic, mechanical, or other device to intercept any oral communication when -
(i) such device is affixed to, or otherwise transmits a signal through, a wire, cable, or other like connection used in wire communication; or
(ii) such device transmits communications by radio, or interferes with the transmission of such communication; or
(iii) such person knows, or has reason to know, that such device or any component thereof has been sent through the mail or transported in interstate or foreign commerce; or
(iv) such use or endeavor to use (A) takes place on the premises of any business or other commercial establishment the operations of which affect interstate or foreign commerce; or
(B) obtains or is for the purpose of obtaining information relating to the operations of any business or other commercial establishment the operations of which affect interstate or foreign commerce; or
(v) such person acts in the District of Columbia, the Commonwealth of Puerto Rico, or any territory or possession of the United States;
(c) intentionally discloses, or endeavors to disclose, to any

other person the contents of any wire, oral, or electronic communication, knowing or having reason to know that the information was obtained through the interception of a wire, oral, or electronic communication in violation of this subsection;
(d) intentionally uses, or endeavors to use, the contents of any wire, oral, or electronic communication, knowing or having reason to know that the information was obtained through the interception of a wire, oral, or electronic communication in violation of this subsection; or
(e)
(i) intentionally discloses, or endeavors to disclose, to any other person the contents of any wire, oral, or electronic communication, intercepted by means authorized by sections 2511(2)(a)(ii), 2511(2)(b)-(c), 2511(2)(e), 2516, and 2518 of this chapter, (ii) knowing or having reason to know that the information was obtained through the interception of such a communication in connection with a criminal investigation, (iii) having obtained or received the information in connection with a criminal investigation, and (iv) with intent to improperly obstruct, impede, or interfere with a duly authorized criminal investigation, shall be punished as provided in subsection (4) or shall be subject to suit as provided in subsection (5).

Note, the law used to read:

Sec. 2510. Definitions

As used in this chapter -
(1) ''wire communication'' means any aural transfer made in whole or in part through the use of facilities for the transmission of communications by the aid of wire, cable, or other like connection between the point of origin and the point of reception (including the use of such connection in a switching station) furnished or operated by any person engaged in providing or operating such facilities for the transmission of interstate or foreign communications or communications affecting interstate or foreign commerce and such term includes any electronic storage of such communication, but such term does not include the radio portion of a cordless telephone communication that is transmitted between the cordless telephone handset and the base unit;

But it now reads:

Sec. 2510. Definitions
US Code as of: 01/02/01

As used in this chapter -

(1) ''wire communication'' means any aural transfer made in whole or in part through the use of facilities for the transmission of communications by the aid of wire, cable, or other like connection between the point of origin and the point

of reception (including the use of such connection in a switching
station) furnished or operated by any person engaged in providing
or operating such facilities for the transmission of interstate
or foreign communications or communications affecting interstate
or foreign commerce and such term includes any electronic storage
of such communication;

(12) ''electronic communication'' means any transfer of signs,
signals, writing, images, sounds, data, or intelligence of any
nature transmitted in whole or in part by a wire, radio,
electromagnetic, photoelectronic or photooptical system that
affects interstate or foreign commerce, but does not include -
(A) any wire or oral communication;
(B) any communication made through a tone-only paging device;
(C) any communication from a tracking device (as defined in
section 3117 of this title); or
(D) electronic funds transfer information stored by a
financial institution in a communications system used for the
electronic storage and transfer of funds;

Note the deletion of the part at the end of (1) wire communication, that
says: "but such term does not include the radio portion of a cordless
telephone communication that is transmitted between the cordless telephone
handset and the base unit;". In fact, reading the amended law at the
Cornell website shows that all references to excluding cordless phones have
been deleted. Given the change to the defintion of wire communication, then
(12), electronic communication, which clearly references radio, would apply.

Other parts of the code provide the exception which makes scanning
governmental agencies legal. I won't go into that, read it for yourself.

<End of previous post>

Please, everybody that has doubts, go read it for yourself.

Mark

anyone have a list of Arizona agencies State and Federal they went to
share

I believe I found a game and fish frequency Saturday while I was
searching it's a 151mhz frequency.

the active ops/security frequencies for Hoover dam and other attractions
too... I have a database but want to update it..... I have several
scanners in my truck and often listen to the scanners on long road
trips.....On the roof are 4 tall antennas.... I ahve difficulty
getting into
parking structures and my antennas also will hit the overhangs at some
fast food palces..

Cute!!!

How did you get a press release for a day in the future? Could you have
at least come up with a company that wrote it?

With a subtitle: "Subtitle Electronics Giant to Sell Software to
customize monitoring experience." Software is not hardware.

1,100 memory channels in 10 banks. Why would anyone do that?

Sell a renumbered bc780xlt and an add-on card??? That makes NO sense.

You're pulling my leg, me thinks.

Tomorrow will tell.

Uniden and CES, Part II
Posted on 01/05/2002 17:53 EST

Marcel recently posted the full press releas regarding the teaser headlines he posted earlier today:

UNIDEN DEBUTS NEW APCO 25 DIGITAL
SCANNER MODELS

Electronics Giant to Sell Software to Customize
Monitoring Experience

Uniden lifts the curtain on its long-anticipated
APCO 25 digital scanner models.

LAS VEGAS (January 8) ï¿½ Uniden America
Corporation today unveiled its new digital scanner
line for 2002, including the consumer electronics
leaderï¿½s much-anticipated base and handheld
APCO 25 digital scanning models.

Speaking at CES, product manager Scott
Carpenter showcased the new scanner products,
underscoring the companyï¿½s commitment to
keeping its customers at the forefront of scanning
technology. ï¿½Our retailers have been pushing us
for a Uniden APCO 25 product for months, and
our new BC250D handheld and our BC785D
base/mobile scanning unit represent the fulfillment
of our promise,ï¿½ Carpenter said. ï¿½With the ability
to monitor conventional, trunked and APCO 25
conventional and trunked systems these models are
state-of-the-art radio scanners.

According to Uniden representatives, the Bearcat
BC250D and the Bearcat BC785D models, which
are slated to hit shelves in late 2002, offer 1,100
channels, 10 banks and a frequency range of
25MHz ï¿½ 1300MHz. The BC250D comprises all
of the features of Unidenï¿½s market-leading BC780
XLT in a handheld model, plus adds APCO 25
capability and an additional 600 channels.

Users of both models must purchase an APCO 25
card, the BCi25D, separately. ï¿½Weï¿½re pleased to

be bringing these great Bearcat APCO 25 units to market,ï¿½ Carpenter said. ï¿½We expect more big cities to migrate to the APCO 25 digital technology, like Los Angeles did this past year, to ensure agency interoperability among police, fire, EMTs and the like ï¿½ and we know news organizations, businesses and consumers will want to monitor their signals.ï¿½

Uniden officials stressed that APCO 25 digital scanning technology simply gives users the ability to monitor the day-to-day activities and signals of standard city and government service departments ï¿½ but in no way allows users to monitor encrypted signals from national and local security organizations.

In a separate announcement Uniden also announced its plans to market its own easy-to-use scanner programming software, which it is demonstrating in its booth at this winterï¿½s annual Consumer Electronics Show in Las Vegas. The software will allow the users of all Uniden scanners with data ports to easily program frequencies into the channels and banks of their scanner.

About Uniden
Uniden America Corporation, the North American subsidiary of Japan based Uniden Corporation, manufactures and markets wireless consumer electronic products including cordless telephones, business telecommunications systems, multimedia communications devices, scanner radios, CB radios, FRS, Marine radios and other wireless personal communications products. Based in Fort Worth, Texas, Uniden sells it products through dealers and distributors throughout North, Central and South America.

Very interesting! So Uniden will not only be offering two new trunking scanners (which are just like the current BC780XLT) but users wanting to monitor digital systems will have to buy the optional plug-in card to do so.

Thanks for the posting, Marcel, and to Karl Dahlquist and Peter Kirk for forwarding it to us as well!
http://www.strongsignals.net/access/news/news.cgi?type=single&section=radio&entry=263

So if you want to listen to the police, this is the way to do it. Otherwise you are out in the cold. And most gun owners seem to

want to keep an eye on the cops, for whatever
reason.

>better??

Good going! It's always neat to find something that works better than you expected.

ANY antenna is going to work better than that rubber ducky. I hooked up a set of cheap $19 TV rabbit ears from K Mart. It was kind of difficult because I had to hold them vertically, but I was able to pick up a ton of stuff. On VHF low I got skip from all over the western part of the country (I'm in the midwest) and even about four short wave images from their 15 MHz fundamentals.

Message-ID: <vndj3ugm5f41ff5g5qim25195k8pcuv0uf@4ax.com>
Source record: 54432

Then what's this labeling requirement the FCC expects all
manufacturers to put on cordless phones?

See 47CFR15.214(c)

That's currently on the books too!

/* IANAL */

As I see it, the legislation may be real. However, it's not just
unenforceable, knowing if a violation has occurred is nearly
impossible without a degree of surveillance that befuddles my
imagination. A cordless phone that operates on the same channels as
baby monitors, kiddie walkie-talkies, wireless intercoms and so forth
should have *NO* expectation of privacy. I see no way of keeping it
from being monitored, whether accidentally or deliberately.

We CAN regulate and legislate what one does with this information.
But that's as far as anyone can take this in to the practical world.

I don't disagree with your research that such laws exist, but I fail
to see how they can be practically applied to anyone. I choose to
ignore such foolishness where it clearly contradicts itself.

73,

>

I would take this scanner back and buy a PRO93 or PRO 92. The PRO 79 has
no 800MHZ coverage and cannot track trunked radio systems. Once you get into
the hobby you would need to buy a new scanner if you discover an agency that
you
want to monitor is using a trunked system. The 93 or 92 will scan non trunked
frequencies like your pro 79 as well. If you decide scanning is not for you,
you have 30 days to return it to R.S. If you get into the hobby, you will be
glad that
your scanner has trunking capabilities. Have fun.

Jim

Hi there,
I am selling a Radio Shack Pro-2006 scanner,
400 channel base unit 25-1300 Mhz
The radio has the 800 Mhz mod and speed mod done,one problem that could be a very minor one is the BATT light flashes in the lcd display even though the battery has been replaced? So the keypad beep has been disabled.It could be the connection or the plug I am not sure as I am no tech?. Cosmetically the radio is in very good shape and functions perfectly. LCD Display is very bright as well. I am open to any offers above $225
Any questions please e-mail me.
Thanks-Russ

Narrow bandpass filtering & narrowly tuned RF amps. The crystal handheld radios
from 30-40 years ago are more sensitive yet, because they would only cover a
2-4 Mhz wide chunk of low band or high band or 5 Mhz of UHF. A move from 151
Mhz to 156 Mhz would require a complete realignment on the older radios.

That's the only part I agree with you on...10 banks seems wierd..Make it 20 or more at least.. Of course the 10 is convient because you can use the 0-9 keys for bank selection. Or at least let the user define which channels are in which banks (by range.. 1-25 in bank 1, 26-150 in 2, etc)

> Sell a renumbered bc780xlt and an add-on card??? That makes NO sense.
No, because not everyone needs the digital card...And I suspect that they have to pay a licensing fee per APCO-25 decoder (heard this, don't know if it's true), so that would be a fixed price min per decoder...why would people pay it if they don't need it (I have no need at all for digital right now). Also makes it easier to upgrade the digital part...They can sell a new board with new features (new protocols for example) without having to replace the whole scanner..Perhaps also this way it could be flashable? (Since they wouldn't have to worry about people messing with the locked out frequencies)

Matt

If, and before you "donate" it to the dumpster, I'll gladly pay the shipping
on it if you wish to dispose of it.

That IS FUNNY Phil, and since it is The State's electronics store, they probably won't go out of business. Just think of the GREAT places it (supposedly) put out of biz: Allied, Lafayette, Olsen, and whoever else. In a communist country, there is 1 electronics part store (RATS Shack).
Dave!!!!!!!!!!!!!!!

This is NOT a joke. Go to www.cesweb.org, search for Uniden, scroll down and you will see two links for "UNIDEN DEBUTS NEW APCO 25 DIGITAL SCANNER MODELS".

I tried to click on either of them but both resulted in a page error.

But it IS THERE on the web site saying they are making "base and handheld units slated for distribution in late 2002."

While nibbling on last years fruitcake, "Dave or Debby" <truth@planetc.com>
grunted out

>That IS FUNNY Phil, and since it is The State's electronics store, they
>probably won't go out of business. Just think of the GREAT places it
>(supposedly) put out of biz: Allied, Lafayette, Olsen, and whoever else.

Olsen was a junk store. Lafayette put themselves out of business
by focusing on CBs, bad locations, and expansion too late in the game.

Allied is still in business, but mail order only. AND owned by RS.

There are PLENTY of other electronics stores, at least in most places.

To reply by email, remove the XYZ.

You know, I agree with you completely. These laws were industry-driven, so that the manufacturers could tell the public "your calls are private", ha-ha! However, I'm not discussing the practical aspects here, just pointing out that, in fact, there is a law that makes it illegal for somebody to monitor cordless phones. Presumably, once armed with this information, the savvy scannerist will make sure that his activities do not come under public scrutiny. Those that persist in telling all about the phone calls the neighbors are making will eventually run up against somebody with a sharp lawyer. Just think of it as evolution in action.

I get good results using a Radio Shack cell phone antenna, such as you would have seen some years ago on the "bag phones". They are discontinued and can be had for about $5. You'll need to add a TNC to BNC adapter (less than $4). They have a hinged joint and are usable on either desktop or handheld scanners.

Several years ago, when the most recent round of ECPA revisions
was being drafted, there was a flurry of stories on local news about
scanners, scannists, listening to Cell and Cordless phones, and the
'horrific invasion of personal privacy caused by these criminals.'
Almost in unison these words came out of the mouths of reporters on
three television stations.

What was interesting, is that they quoted posts from this
newsgroup, and alt.radio.scanner in which members posted inquiries
for mods for radios that were cell blocked, and how to monitor DSS
cordless phones by forcing a handset into the 'test mode.'

They then went to the homes of some local scannists and grilled
them about their nefarious hobbies, and equated them to the
criminals who use scanners to evade police dragnets, and commit
heinous crimes.

Which led to a public hew and cry, locally, for restrictive laws
against and a call for confiscation of scanners in this area. Some
laws were enacted penalizing scannists for certian types of
monitoring in the city, and layed out the guidelines whereby
scanners may be confiscated.

I'm not suggesting that we cease discussion here, but I am
cautioning the need for some well thought out discretion.

The point of this post is that it was comments made HERE, not
privately to third parties, that did the most damage in bringing
scanning under media scrutiny. Yes, it IS illegal to monitor
cordless phones and if you tell someone you might end up in jail.
But the endless thread of posts announcing that one scannist or
another is going to defy the law and listen anyway, justified by
whatever twist of logic he may apply, is doing more to tighten the

legal noose around the hobby, that the actual practice of monitoring.

Put another way....if you don't like the way the laws are going regarding this hobby, don't post on a worldwide forum your intent to find loopholes in them.

Now, be clear on this point...We need not cower in the shadows to practice our hobby....but it is foolhardy to publicly announce one's intent to flout the law. This, especially during these troubled times, becomes a lightning rod to attract the attention of legislators eager to make a name for themselves, at the expense of our rights and freedoms.

These newsgroups are watched by those who already see us as a threat to their security. And as short sighted and ill informed as these people may be, they do carry huge clout when it comes to exercising their whims and curtailing our access to frequencies, content and otherwise public materials on the airwaves.

Remember, it's not reality that's at the heart of this kind of legislation, it's the fear generated by those seeking control.

And if one round of restrictive legislation doesn't do the trick, then they WILL enact another, as the latest revisions of ECPA will attest.

So, discretion here, fellow enthusiasts. Discretion. Don't discuss the unenforceability of the law....no matter how true that may be. Don't discuss the ease with which some receivers may be modded. No matter how true that may be. And don't discuss the ethics of frequencies that pass through your property, and having access to them. It's precisely THOSE posts quoted and displayed on screen during the media treatment of this hobby, when the ECPA revisions were being debated.

Not just here...but in major cities across the nation. Make no mistake, the hobby IS under attack, and they are using our own words, our own excercise of our legal rights and freedoms against us.

Under such circumstances, it's best to stay off the radar screen and avoid the kind of content contained in this thread.

Again, I'm not suggesting silence. But discretion. Well considered discretion. In this case rebellion will definitely work in the enemy's favor.

Yes, I have WinRadio 1550e and can confirm that it goes to 1.6 GHz.

The published factory specs say only 1500 MHz. So I querried it with
WinRadio and they said that they extended the frequency because many
users asked for it and the receiver hardware was capable of it, so
they made it standard in the software. (But they did not change the
specs? Sounds weird?)

But anyway, I do love the radio. The QST review is good but still does
not do it justice.

Hope this helps,
Frank

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion

Skip on rabbit ears is no big trick.. I have done it lots of times. In fact, the first skip I ever picked up was on rabbit ears. I was watching a movie one night on the local (Portland) channel 2, 25 miles away, over a hill, and suddenly I found myself watching CKCK channel 2 in Regina, Saskatchewan, Canada.. when the conditions are right for VHF ducting or e-skip, you don't need a fancy antenna...

Peter, I respect your views. However when the emperor is strutting
around with no clothes on, it's pretty hard to say ANYTHING without
being "indiscrete."

> These newsgroups are watched by those who already see us as a

And I do my part by writing formal comments to the FCC.

> Remember, it's not reality that's at the heart of this kind of
>legislation, it's the fear generated by those seeking control.

The nice word for such people: demagogs. I can think of many many
others, but I won't bore you all with the details.

> And if one round of restrictive legislation doesn't do the trick,
>then they WILL enact another, as the latest revisions of ECPA will
>attest.

They can legislate until there are no trees left to print all the laws
they can write --it won't make a bit of difference! A naked emperor
is still a naked emperor no matter how many laws we enact saying he
has clothes on.

>discretion. In this case rebellion will definitely work in the
>enemy's favor.

Peter, if you have a nice way of telling the emperor that he's naked without getting your head chopped off, I'm listening. However, you should know that if you say such things in private, emperors don't like to be told they're sitting around buck naked. If you're going to tell an emperor he's wrong you've got to do it in public and shout it from the highest tree top. Only when you have the public's full attention are you going to have a fighting chance of staying safe from a back stabbing.

The evil here is the creation of contradictory and unenforceable laws. This leads to an even greater mess than just the demolishing of a hobby: It diminishes respect for the law, and with that goes the foundation of our very civilization.

I respectfully disagree with you. If the media chooses to quote us out of context without reporting the whole story, we owe it to ourselves to write letters and tell them how it is. We also owe it to ourselves to organize PACs to counter the nonsense being spewed by those with something to sell. Radio Shack would like to continue selling scanners. So would Uniden, Icom, Yasue, and so many more. If one were to build a PAC to fight the great fight, I'm sure you'd get support from them. Just look at the comments they made to the FCC on the latest round of ECPA regulation...

Frankly, I haven't bothered to listen to a cordless phone in years except to prove to myself that it was possible. I really couldn't care less about someone else's gossip. I'm much more interested in monitoring public safety traffic.

The point is not that the emperor has no clothes. The point is
that the emperor can and will behead, at will, those who do not
appreciate his wardrobe. And even if the law is unenforceable, you
can't outlast the Government, even if they're wrong. They can
bankrupt you with nuisance actions. Much of what they did to Bill
Cheek had no foundation. But they did keep him from his medical
treatments by ordering him into court and they DID deplete his
resources by requiring a defense against their, often ungrounded,
prosecution.

> attention are you going to have a fighting chance of staying safe from
> a back stabbing.

You're point is taken. However, the public is NOT armed with facts
here. The public is convinced that WE are the problem because of the
attention brought to this issue by media activists who present the
hobby in teh worst possible light, using, among other things, our
own words, selected from these newsgroups, and focussing
specifically on postings that state an intent to flout the law.

Absent balanced presentation, the public is not getting the
picture.

Postings here do not make it into the public mainstream, except as
selected and edited for such media presentations. Postings here are
falling into the hands of those that already believe, AND those that
would selectively use our own words against the hobby, by taking
those words to the public in inflammatory 'news' reports. Postings
here are like shouting "No More Gun Laws," at Charleton Heston's

house. The public is not getting the facts, and more importantly, they are not getting the TRUTH about why.

Remember Bob Grove's appearance before Congress? He was publicly crucified as part of the problem of crime evading police. And subsequent local news reports underscored that public conclusion, with both selective quotes from Grove, and words posted here in these newsgroups. The message Grove tried to present not only never got out, but was undermined before he ever took the hot seat. Using words of active scannists who object to legal regulation of the hobby, and presenting them as criminal intent.

I'm not disagreeing with your point that the laws are unenforceable. I'm saying that to publicly declare them to be so, invites those with activist intent to tighten the reins of this hobby to use those words to bring legislative motivation to make them enforceable. And more extreme. It's like telling a bully, "ha ha, that doesn't hurt," after being socked in the gut. I guar-on-damned-tee you he'll up crank it up an notch and MAKE it hurt.

The last revisions of ECPA, which permit a lot of horrors, such as selective enforcement, and legal harrassment through the courts are a testament to this.

And our own words, from these newsgroups, were used as ammunition in the debates about, and the presentation to bring public support for the revisions of ECPA.

If you want to get the message out to the public, you need to get the public's attention. You need to go to the public, not a hobby newsgroup of which the public is not aware, and to which the public will not visit, to shout your indignation. Because here, the words will be used against us, and presented to the public as the ravings of potential criminals.

You can't whisper privately that the emperor has no clothes...you need to make the public believe it...and they're not getting that message by what's posted here. They don't want to believe, so what's said here only convinces them that they're right and we're wrong, as the messages are cherry picked by media personalities with an agenda to forward, nd because this is a forum that's international in scope, but not incorporated into mainstream lifestyles, the positive message is not being heard by the public.
>

You're right. The problem is the creation of contradictory and unenforceable laws. Laws that were created, in part, by response to

select messages posted to these newsgroups.

>
> I respectfully disagree with you. If the media chooses to quote us
> out of context without reporting the whole story, we owe it to
> ourselves to write letters and tell them how it is.

Again, you're right. Write letters. Make public what we know to be
true...but in the process, don't arm them for another round of
activism against us.

> We also owe it to
> ourselves to organize PACs to counter the nonsense being spewed by

> the latest round of ECPA regulation...

Then build a PAC. Call radio talk shows. Get the message out in
the same fora that our enemies use to make their moves against us.
Make it public. Don't let the enemy quote you out of context in what
looks, to much of the computer/Usenet illiterate public, like a
private conspiratorial gathering place. Take your case to the
public, yes. But while you're doing that, don't arm your enemies
with loose talk here, that can be used against you. Or like so many
other legal pursuits, you'll be demonized before you ever open your
mouth, and your cause is dead before you ever start.

Jake, I'm not saying you shouldn't fight the fight. It's a good
fight. And it's essential that we win it.

I"m saying that if you're going to fight the fight...don't arm
your enemies before you pick up your sword.

No, actually, since there is no ban on scanners with cellular receive, just a mandate that no more will be made after a given date. It would be more like the machine gun "ban" where those that already exist are grandfathered, but no more are allowed.

Hmmm ... not really. Pre-ban scanners really can receive cell phone conversations but the banned "assault rifles" only look like assault rifles.

Point well made. And as you know (and anyone else who reads the public record on the latest round of FCC Part 15 regulation) I didn't shy from telling the FCC just how pointless and ineffective their exercise would be. And in fact, the comments I made to them formally are scarcely any different from those I have made here.

I take issue that information or declarations on this or any news group are arming our political adversaries. Surely there will have to be forums where such things are discussed and any news reporter worth two cents knows where to find them. If not here, then it would be somewhere. I'm not interested in developing double secret handshakes before we speak our minds.

Peter, I have to point out that virtually all technical interests of any sort are under fire from the vast numbers of ignorant masses who are scared of what a person with technical knowledge can do. This image isn't helped by the pervasive notion of the greasy-haired, pocket protector wearing geek with no social skills.

If we are to fight this battle, we're going to have to face it on a cultural level too. Hackers have done damage to technical avocations of every shade by causing ignorant people to cower in fear of what could be done to them by anti-social goons. The feats of Kevin Mitnik are all too often exploited out of proportion by people with an axe to grind.

The reality is that the so-called anti-social behavior is often a figment of the PR departments of those with a profit margin to protect from their own technological ignorance. Only a cellular telephone company could posit that your conversation on the air is safe and secure. Only a TV network executive could have been so stupid as to think that any signal one could broadcast would be too difficult for an average guy to figure out and decode himself.

Yet these days, people don't realize they're on the air. Nobody even uses the term radio any more. They call it "wireless" as if it's just like having wires, but somehow just as private. I have no respect for

those who perpetrate this deception on the public at large.

I think these subjects need to be discussed openly so that we can know what to put in to the letters we write to our politicians. If this isn't the forum to discuss such subjects I don't know what is.

That's great and all, but generally the press get in a day or two BEFORE the general public...

How do you think they were able to make up a press report about the scanners BEFORE they ever even attended the show??

And yet, that's exactly what has happened.

> Surely there will have to
> be forums where such things are discussed and any news reporter worth
> two cents knows where to find them.

No question. But there in order to be effective in making our case before the public, because our enemies will certainly not do it for us, and since they have access to mainstream media and we do not, we must put our best face on the hobby, so that our words cannot be used against us. Here in the Windy, channels 2, 5 and 7 used quotes from this very newsgroup, as did channels 5 and 4 in St Louis and countless TV and radio stations on the local level nationwide, and ABC and NBC at the network level. That's a lot of bad exposure effectively presented by our enemies, using our own words against us. If we're to make our case, that has to stop. Or we enter the fray as the criminals in the public mind. We must put together a common face, and we must not play into their hands.

> If not here, then it would be
> somewhere. I'm not interested in developing double secret handshakes
> before we speak our minds.

Nor am I, but sadly, throughout the history of mankind, that's often been necessary when mounting an assault on public misconception. And in this case, where openly speaking one's mind,

arms our enemies with our own words, it may be necessary, too.

>
> Peter, I have to point out that virtually all technical interests of

> are all too often exploited out of proportion by people with an axe to
> grind.

And that's exactly what I'm saying. We need to take it before the public. And we need to make the case strongly and clearly, directly before the mainstream public. Those same ignorant masses. Because the only thing they're hearing is the exploitation of the negative by mainstream press, distorted, yes...exaggerated, certainly. But it's our enemies who are getting the word out, and they're using our own words against us. We need to STOP arming our enemies, and get the word out ourselves. In front of the same mainstream public. With just as much organization.

>
> The reality is that the so-called anti-social behavior is often a

> think that any signal one could broadcast would be too difficult for
> an average guy to figure out and decode himself.

You're preaching to the choir here. No one on this newgroup needs convincing. It's those cell phone users that need to be convinced. And they need to be convinced that it's not the scannist who's doing anything wrong. That's what's not happening. WE all know it, but we discuss it here...NOT out amongst the public that needs to know the truth. But our enemies are using our discussions here to make the case against us, at the local and the network level.

See where this goes? We need to stop arming our enemies. Stop openly discussing the flouting of the law, for our enemies to see and display before the public, and START making our case before the public in our own defense.

>
> Yet these days, people don't realize they're on the air. Nobody even

>
> I think these subjects need to be discussed openly so that we can
> know what to put in to the letters we write to our politicians. If
> this isn't the forum to discuss such subjects I don't know what is.

The problem with this forum, is that it can be scanned and the
posts cherry picked that present us in an ill light, and be used
against us. The place to discuss this is in private, and there
needs to be a public relations movement to get the message out that
scannists are NOT criminals. That scannists are not hackers, and
privacy invading technogeeks. Unfortunately, the media have taken
our own words from posts here, and presented the case that we are
hackers, and privacy invading technogeeks, and when they state their
intent to flout the law, they ARE criminals.

It's time to clean up the image of our hobby. And that starts
first by watching what we say in public that can be used against us.
And then we must make our own case before the mainstream public.

Before there isn't a hobby to enjoy, anymore.

"Press Releases" are usually written by the company or person DESIRING
press coverage. They are not actually written by the "press". These
types of reports are usually faxed, posted to the web, or sent via some
other way to reporters, news agencies, magazines, etc... with the hope
that the receiving party will write an article or review of the item.

This is also how many politicians make announcements.

What is really interesting here is that I've never seen
a radio or TV station newstation that didn't have several
scanners going at once. I suspect the reason most
police and fire departments welcome encryption is not
because of the casual home scanner listener, but is more
likely because they are sick of tripping over newscrews
who have beaten them to a scene.

I think these folks who are so adept at generating news
should look to their own houses first.

I go into malls, restaurants, etc., and just listen to people.
They'll say the most interesting things when they think no one is
listening. Of course most of the conversations are mundane and boring
and uninteresting, but then so are most police/fire transmissions.
Why would anyone want to eavesdrop on them?

"Timothy V. Peters" <tvp@t-k.com> has ferretted out the following "catch of the year" from the CES2000 website, somewhere at http://www.cesweb.org/

Scroll down or click here for Monday afternoon update
Scroll down or click here for Tuesday afternoon updates

Press Release Date: 1/8/02

NOTE: Uniden's "Press Event" to officially introduce these scanners is scheduled for Tuesday January 8, from 2:30pm to 3:30pm at S227

UNIDEN DEBUTS NEW APCO 25 DIGITAL SCANNER MODELS

Electronics Giant to Sell Software to Customize MonitoringExperience

Uniden lifts the curtain on its long-anticipated APCO 25 digital scanner models.

LAS VEGAS (January 8) - Uniden America Corporation http://www.uniden.com today unveiled its new digital scanner line for 2002, including the consumer electronics leader's much-anticipated base and handheld APCO 25 digital scanning models. Speaking at CES, product manager Scott Carpenter will showcase the new scanner products, underscoring the company's commitment to keeping its customers at the forefront of scanning technology. "Our retailers have been pushing us for a Uniden APCO 25 product for months, and our new BC250D handheld and our BC785D base/mobile scanning unit represent the fulfillment of our promise...With the ability to monitor conventional, trunked and APCO 25 conventional and trunked systems these models are state-of-the-art radio scanners.

According to Uniden representatives, the Bearcat BC250D and the Bearcat BC785D models, which are slated to hit shelves in late 2002, offer 1,100 channels, 10 banks and a frequency range of 25MHz - 1300MHz. The BC250D comprises all of the features of Uniden's market-leading BC780 XLT in a handheld model, plus adds APCO 25 capability and an additional 600 channels. Users of both models must purchase an APCO 25 card, the BCi25D, separately. "We're pleased to be bringing these great Bearcat APCO 25 units to market," Carpenter said. "We expect more big cities to migrate to the APCO 25 digital technology, like Los Angeles did this past year, to ensure agency interoperability among police, fire, EMTs and the like - and we know news organizations, businesses and consumers will want to monitor their signals."

Uniden officials stressed that APCO 25 digital scanning technology simply gives users the ability to monitor the day-to-day activities and signals of standard city and government service departments - but in no way allows users to monitor encrypted signals from national and local security organizations.

In a separate announcement Uniden also announced its plans to market its own easy-to-use scanner programming software, which it is demonstrating in its booth at this winter's annual Consumer Electronics Show in Las Vegas. The software will allow the users of all Uniden scanners with data ports to easily program frequencies into the channels and banks of their scanner.

More news and "specs"!

Here is further information about the scanners, obtained today (Monday 1/7/2002) from a Uniden insider courtesy of Marcel <Marcelrf@BELLSOUTH.NET >

?????= He will inquire

APCO P-25 digital voice trunking capability? YES

APCO P-25 digital voice conventional capability? YES

Ability to scan conventional digital, conventional analog, trunked analog, and trunked digital, and multiple different trunked systems ALL at the same time YES

APCO P-25 UNENCRYPTED Digital Voice (IMBE Vocoder) Demodulation to analog voice? YES

APCO P-25 UNENCRYPTED 9.6K baud trunking control channel operation YES

APCO P-25 UNENCRYPTED 3.6K baud trunking control channel operation YES

APCO P-25 Level III ENCRYPTED 3.6K baud trunking control channel operation NO

APCO P-25 Level III ENCRYPTED 9.6K baud trunking control channel operation NO

APCO P-25 UNENCRYPTED C4FM modulation ????

APCO P-25 UNENCRYPTED Phase II 6.25KHz CQPSK Modulation ????

APCO P-25 UNENCRYPTED Phase II 6.25KHz Channel Operation ?????

APCO P-25 UNENCRYPTED Phase II TDMA Modes ?????

OpenSky trunking capability NO

OpenSky UNENCRYPTED Digital Voice (AMBE Vocoder) Demodulation to analog voice NO

PL / DPL search & display YES

PL / DPL use per channel YES

Tuesday afternoon updates, January 8 - 2:10 pm PST

According to a report by Norm "Mr. Scanner" Schrein at http://www.bearcat1.com/ces.htm, "Each scanner will have a suggested retail price of $350.00 and will be available late in 2002." He also reports that "the Bearcat APCO 25 digital card -- the BCi25D...will be just over $300.00." The units will receive analog, do trunk-tracking, etc right out of the box, but if you need digital demodulation, you'll need the card.

499. trunk scanning--how does it work?

Newsgroup: rec.radio.scanner
Date: 2002-01-09 01:26:18 UTC
From: Karl Agee <kdagee2@yahoo.com>
Message-ID: <3C3B9C3A.D6A584A3@yahoo.com>
Source record: 54268

I posted this a few days ago, didnt get any response so I am trying again.

My local ps agencies use a motorola type II system, but, they seem to broadcast on both conventional 15x.xxx (conventional) and on 86x.xxx (trunking). At times, I pick up a transmission on the 15x.xxx and then the response from dispatch and following transmissions are on the trunking frequency.

So how do these systems work?? do the mobile units transmit on the conventional and the base re-transmitts on trunking?? Do I really need to have both the conventional and trunking freq's programmed in for these systems??

1) They were time travelers.
2) This was an early April Fool's Joke.
3) There is no way you are going to explain why a press release was dated and released with a date occurring in the FUTURE, unless the explanation is about it being fraud.

It doesn't matter WHERE it came from. We can all see it is a lie, because the date had not occurred yet. It
is a FACT that it therefore was false information. Nothing else in it can be considered credible or factual
information. An impossible lie like that does not become true because you find it on a particular
website. The date is still a lie.

Back before the ECPA (the law that made listening to cell calls a crime)
I overheard a conversation between cop and his superior getting their stories
straight to explain how a young man ended up dead. Shot in the back.
While pinned on the ground by the feet of several officers and handcuffed.
I heard the police dispatch and some funny comments and started hunting
the cell call that I suspected I would find. The comms started out on the
police radio, moved to a ham radio and then to a cell call. The cops got away
with murder.
In the USA many cops are running private comms on cell/pcs to avoid being
taped by the department. Almost every PD records all radio traffic on their
radio system, and cell/PCS allow cops to escape the eye and ears of both the
public and thier bosses, who, when bad cops turn up, can claim "But there was
no sign we had a bad apple".

And while it is illegal for anyone to listen to any cell converstain without a
court order, I know for a fact that a ceratin PD had several (5+) Pro2004
modified to allow cell reception after the ECPA became law. I know the tech
who did the mods, he got in a moinor jam and bought his way out by providing
the LEO with another tool to break the law.
And I am sure that the cops never, ever monitored cells calls without a
warrent.
Yea, and the Easter Bunny is laying those chocolate eggs (BTW did you know
theat Cadbery has their HQ in Hobat Tasmania?) for Easter.
Never ever trust the cops.
They violate laws every cahnce they get.
And almost always get away with their crimes.
Only bad luck or stupditiy bring their collective guilt to public scrutiny.

Hey, for you and anyone who really wants to know how the theory of trunking systems work, I strongly suggest taking some time and going through this "online course" on trunking, all for free of course. It's from the Motorola site and it's awesome.

http://www.motorola-wls.com/CW_ACS002/cbt/course.htm

Go through it, you'll be glad you did.

Yeah, they put up pictures on their website back on March 03, 2002. You must have missed it.

Hey, tomorrow is the 8th! That Press release should be out tomorrow if those time traveling fortune tellers were right!

Hey you guys are really slow with the details. Here in Oz, Uniden announced their forthcoming handheld & desktop scanners (the 250 & 700 XLT respectively) with APCO26 last year. Even Motorola were taken by surprise, as they haven't developed it yet. Just goes to show how effective our news releases are. eh?

They probably have the old high band base and the trunking base cross-patched at the dispatch console for a while to allow some secondary users time to purchase new equipment, and/ or while the trunking system is proved to reach all the tough spots it needs to cover. This typically can go on for 6 months or a year while all the users decide the "newfangled" radios will not "get them shot". I can see where this would be curious to people who haven't been present in person for a changeover like this. Police are concerned with reliability more than anything else, and while they are not unreasonably resistant to change, you can't blame them for wanting to be completely sure of any switch in communications.
Trunking isn't vastly complicated as a logical system, the earlier reference from Motorola in the thread is excellent. I can tell you the first generation Motorola trunking systems were hell to work on, with what seemed like about 1000 20-40 pin DIP IC's - TTL and early CMOS, taking up a whole refrigerator size cabinet full of 18"x18" boards. You didn't want to be the service person on call when lightning got one of those babies in the middle of the night! I knew a guy who spent 36 straight hours changing chips on one of those systems after a big lightning hit. Of course now it's all on one little board (with a spare on hand) and the bad one gets sent in to the factory for exchange when it quits.

That's what all the spec sheets have claimed -- strongsignals.net for more
info.

> Would they need some type of proprietary license from Motorola?

That's the card referred to in the spec sheets -- $300.

> I'm sure EDACS Pro-Voice and other digital users have the same question...

And the answer to them is - NO. This is APCO25 only.

That's 4 scanners not three ;-) . besides, you missed out what are probably the best two; the Icom R-10 and Alinco DJ-X2000. I have one of each, and rate them both ahead of any of those that you mentioned, especially the R-10 which, although it doesn't have trunking, is the best handheld unit I have used. I have also owned/used the Icom R-2 and the Alinco DJ-X10, so I can't be accused of 'because I own it, it's the best' mentality. I can't comment on the Yupiteru 7300, nor for that matter, any of the Yupiteru range, but I'm sure there will be other users/owners who can fill you in on that brand of scanning receiver.

Yes, it had the wrong date. It was done up ahead of time. So
technically, it's incorrect. Does that invalidate the rest of the
information in there? What about the picture of the new scanner on
strongsignals.net? No.

And you think Associated Press which 80 percent of our news is credible. The only credible part about it is, it is credibly slanted left wing. Pat Robertsons news is great. It is plain to see you never watch it.

This is common practice in press releases.
Also, you know, very often a newspaper goes to print before Midnight for the early AM deliveries..I guess that paper isn't "valid" since it's printed at 11:30pm with tomorrow's date on it. Oh well, guess none of that news actually happened.

I don't think it's Motorola's license... I read somewhere that the APCO P25 vocoder rights are held by a group that includes MIT (Mass institute of Technology) and I dunno who else. The story was that "they" were demanding around $200,000 from Uniden plus $7 or $8 dollars per unit (scanner) for rights to the license, and Uniden has to arrange for building the things on their own. All rumors, but they were consistent...this was last Summer.

You're not familiar with the press industry are you? MANY times I get press releases at work (TV) which say "HOLD FOR DISTRIBUTION UNTIL XX/XX" with a date in the future. We cannot release that information til the later date, but they want to make sure we have it ahead of time. That's what happened here.

That's not just a problem with this forum, it's a problem with ANY
forum. Give reporters credit where it is due. They know how to find
out who is doing what. The problem is that they always cherry pick
the facts and opinions --and are never even-handed about it, despite
carefully cultivated propaganda to the contrary.

> It's time to clean up the image of our hobby. And that starts
>first by watching what we say in public that can be used against us.
>And then we must make our own case before the mainstream public.

If this isn't a good forum for such issues, what is? Were militias
safe from intrusive reporters after the activities of Timothy McVeigh?
Did the book "The Turner Diaries" stay underground? Is a magazine or
journal a secure place to discuss such issues? Even news letters such
as TAP (a very old underground news-letter for early phone phreakers)
were monitored by various media outlets and the FBI.

We need a forum to present our ideas and concerns to each other. I
can't help it if a "news" media outlet pulls my comments out of
context. Those things have happened to me and will probably continue
to happen regardless of what forum we use.

Our only recourse is to present our ideas to each other in a public
way so that we can coordinate our comments with those in control. Our
only defense against outrageous behavior is a strong offense --or shut
up and go underground.

I'm not ready to form a secret "snicker at the naked emperor society"
yet. So this forum will have to do.

I do agree with you on one note, however: If we're going to write
critical messages, write them carefully. Yes, speech is free. But
the consequences are not. I've been careful not to actually disclose

anything specific about what I've heard on the air unless it's a service which specifically expects public disclosure, such as broadcasts or ham radio.

And If you're going to tell others how to do something such as un-block a scanner or build a down-converter, at least mention the background ethics involved.

When faced with contradictory laws and legislation that flies in the face of common sense, the key is to stay ethical. The police in your area using APCO 25 may whine and complain, but you have a right to monitor their activities from your own home. And you owe it to your community to do just that.

And most of all, in the event you should monitor something of overriding criminal concern, consider disclosure. MDT traffic between Police cruisers with racist comments about a previous bust are an example of this. Obviously, if you value your personal safety, you would to well to remain as anonymous as you can.

Yes, these are dangerous statements. But I make them with great care. And so should everyone else who reads this.

Exactly right. However, the posts here are as much as a bumper
crop of material for them. They turn here first when then need to
make the case against scannists, and radio hobbycraft in general,
and FOR regulation of frequency access. (By the way, they've gone to
court in support of their exclusion of any frequency access
restrictions which may be enacted. It was pointed out here that most
reporters, newsrooms and media pundits are scannists, or have access
to scanners and scanning systems. This is true, and these same
reporters who thing WE are the criminals steadfastly maintain their
exalted place in the universe excludes them from such restrictions.
When I was with CBS this was a HOTLY argued position. Even by the
very reporters who harvested their material from scanning NG's to
make the case against scanning.)

The reason they turn here first, is that these newsgroups are rife
with defiance, and openly stated intent to flout the law.

But the point is, that if the intent to do damage to our hobby is
so apparent, it's foolhardy in the extreme to make it easy for them.

The price sucks... Go figure, why would anybody buy the new APCO-25 scanner, and NOT want the digital card? It would be pretty stupid if you ask me, you may as well say the scanner is going to run us about $650 to $700... Not quite what I would call within the average consumers price range...

Because they may want all the features but don't need digital? How's that sound. Why do people pay $350 for a BC780XLT when you can get a 10-channel programmable base for $40?

Plus some may want to buy a portable and the base, but only one card to swap back and forth. Saves $329...

> Because they may want all the features but don't need digital?

Ok, you took that wrong... And were quite snippy about it too... Geesh man, dump an ice cube tray down your pants and chill!

If they don't need the digital, then they should buy the 780 instead, no point in waiting just to get some extra channels... Pretty rediculous if you ask me.. If I didn't need the digital capabilities, I wouldn't be bothering myself to wait that long considering the scanners are practically identical (base units anyway). I can see plainly why they would buy the portable, as there currently isn't a portable that is comparable, feature-wise.

> How's that sound.

Pretty rude...

> Why do people pay $350 for a BC780XLT when you can get a 10-channel
> programmable base for $40?

Because they want the features, like you said... Common Sense... And like I said, you took my post wrong.. Not the first time it has happened, and certainly not the last I'm sure...

> Plus some may want to buy a portable and the base, but only one card to
swap
> back and forth. Saves $329...

This is true. About the only point I can completely agree with you upon...

PH

Victoria is in the process of installing an area wide digital network.
All public safety agencies in the area will be switching over to this
system. The system, called CREST, will be online as early as late
spring. Check out their website at http://www.crest.bc.ca

Well I sure might buy one. Here's where I'm coming from, PH - I don't have or need even a trunktracking scanner in the semi-rural area where I live...right now most everything is VHF-high band repeater. (Scanning heaven) So i haven't bothered with a whiz-bang 780 when my 760 and BC2500 take care of just about everything except my occasional travels to L.A. or San Fran.

But within a very few years most everyone will be essentially "forced" to go to narrower bandwidth radios, which for public safety will almost universally be P25 digital, if for no other reason than interoperability / mutual aid. So, when I decide I'm ready for my next scanner purchase I'd be very shortsighted NOT to invest in a radio that will be at least upgradeable to P25 when THAT time comes. I'll likely pay the $350 (once the thin has been on the streets a while and shows that it works) to begin with, and add the P25 card when/if I eventually need it.

I use my scanners a lot, and they last me a long time when I treat 'em right. I remember that I cringed when I had to pay like what - $300? $400? - for my BC2500 five or six years ago, but I can blow that much in one weekend trip somewhere and the money's gone like a fart in a whirlwind. I don't remember the price...but even if it was $400 it's still "paying me back" with its usefulness. ($400 over 6 years comes out to...18 cents a day or something?)

YMMV (everyone's does!)

>
> I want to:
>
> 1) Banish the wall warts!

A noble endeavor indeed however you must keep in mind that all wall warts are not created equal. Some are 3 volts, some 6 volts, some 9 volts, etc. Some are 50 milliamps, some 100, some 500. Some may even be regulated, some are filtered, others are not.

> 2) Provide battery back up in event of power failure

Battery backup is not that hard to do, but it can be expensive and you must be selective on the battery type you use. Nicads are relatively cheap, but are not well suited for constant charging.

> 3) Provide for a way to charge the battery backup, a small solar panel would
> even be considered here.

It sounds to me like you might do better with a computer UPS.

> 4) Have a 13.8/12VDC as the primary level with say a 10-15A rating to start,
> expandable would be a plus, but to start may use a fixed level supply

Not sure what you are trying to power. Relatively speaking, 10-15 amps is not much.

> 5) Multiple DC outlets in a rack panel

MFJ makes a couple of devices similar to this. I have one on my ham station and run several radios off of it. I have another on my test bench.

> 6) Digital display of current voltage and current draw

Not that difficult to do. There are DC volt meters for about $15-20. I think I have seen current meters also but never paid much attention to them.

> 7) Digital display of current battery voltage

Again, not difficult to do.

> 8) DC-DC conversion ability to create needed DCV for other than 13.8/12V devices

Again, not that difficult to do, but you need to know what you are supplying and what it needs.

You mentioned banishing wall warts all over your house. Just remember, DC does not travel well over distances. There is a substantial drop over even modest distances, especially with higher currents.

Hi there,
F/S Commtel COM510 400 CHANNEL SCANNER 500KHz-1300MHz *NO GAPS*
This is a very tiny hand held scanner,I bought this new from Javiation
See for more info and a picture http://www.javiation.co.uk/com510.html
This is the same radio as the Weltz-1000 (400 ch) or Weltz-2000 (1000 ch)
This is an excellent radio overall! (check out Strong Signals Review)
http://strongsignals.net/access/reviews/reviews.cgi?type=display&rtype=rev&class=recv&num=004
It is in like new condition with box and manual.
I am open to serious offers only please on this radio!
Please e-mail me directly at rusty@dccnet.com
Thanks-Russ

Sounds like the driver was in a hurry today and didn't want to stop at
your house. From what I've experienced, these "deferred deliveries"
are not too uncommon.

Print the tracking page from ups.com so you have evidence.

Start by calling 1-800-742-5877 and give 'em hell.

I've had this happen a few times to me. Once it was deleivered to the
wrong address and UPS had to go back and get it from that address. When
UPS went to retrieve my package the people living there said "duh we
didn't get no package". As it turned out the "duh" people got a $300
scanner for free and I recieved another one in 2 days.

Better call and find out. UPS can be reached at 1-800-742-5877 Just
have your tracking number handy when calling.

Other times its happened UPS simply said "ops it will be really delieved
tomorrow". But then again if I were you I'd Call.

I run a mailorder business and since 9/11 both UPS and USPS have simply
sucked!

I just purchased a RS Pro-93 scanner, and I am very confused on how to identify if a particular frequency in my area is trunked, and if so, how to enter it into the scanner.

I've looked thru the manual, but I'm still missing something. Is there a step-by-step guide, with examples of how to enter trunked frequencies into a Pro-93?

Thanks,
Rob

We have pretty poor service, here in the northwest suburbs of Chicago. Oftentimes, the driver doesn't even ring the bell; he just leaves the attempted delivery note. I was fortunate enough to get ahold of the local UPS depot. Whenever this happens, I immediately call up the facility and have them send the driver back to our place. I figure it this way; if the truant driver is forced to come back a second time, perhaps that person will think twice, next time he is to busy to do his job.
Now, I know that there are two sides to every story, and maybe that driver ran into a lot of "no shows", when trying to make deliveries, but c'mon, give us people a break! We are paying for shipping, so at least try to exhibit some semblance of reliability!

Okï¿½ let me backtrackï¿½

As far as I know, the current Motorola ASTRO-16 protocol is not the same as APCO-25 (also called ASTRO-25), although they use the same IMBE voice decoder (vocoder).

Since ASTRO-16 is basically Digital Smartnet, a scanner can follow the ID's on the control channel, and the IMBE chip can decode the voice. Since Uniden can already decode Smartnet, and IMBE is practically an open standard, then I suppose the new digital scanners are already and legally capable of decoding trunked Smartnet/ASTRO-16 radio systems (give or take a few $$$).

Am I on the right track?
JD

All are good scanners its a matter of what options you are looking
for. I recently added the Alinco DJ-X2 to my collection . It kicks
some serious butt for it's size. I was impressed by it's sensitivity.
If you want this one try to get the unblocked version. you get more
for your money.

Rob-

I agree 1000%--the manual is pretty bad. Have you joined the Pro-93 Yahoo
Group? Lots of good stuff there, and very possibly your answer-and
certainly the opportunity to ask folks who know a whole lot about that
scanner.

Simple regulator circuits off the 12vdc will take care of different
voltages, even if you use the car adapter type that allow you to select
different voltages. just keep in mind the current draw. add up the current
draw to get maximum amount required.

i would agree that a ups would be a quick way to set up but the batteries
in a ups will sulfate also. i would pull the plug every 3-4wks to allow it
to cycle the battery.

> > 4) Have a 13.8/12VDC as the primary level with say a 10-15A rating to start,

>
10-15A is a lot of juice for receivers, answering machines etc. if transmitters are involved yes maybe you have to watch the current. i have a 25amp supply but never peak over 7amps with all the crap i have on it when transmitting 40w on 2m.

> > 5) Multiple DC outlets in a rack panel

Or they could have hidden it from you... once a few years ago I ordered an antenna from Universal. Waited and waited for it to arrive. Finally I called them, they checked with UPS and UPS said that I signed for it. Well I knew I didn't sign for it, so I started looking around. Sure enough, it was in my garage (which I rarely used). No note left, nothing. At least it was in my garage and not someone else's.

Hello
I have dabbled in the scanning hobby for about 5 years now (still an amateur.....the only scanners I have owned are the bearcat sc150 & bct-7 ....I think those are the correct ones, I am typing this from memory here at work).
Anyway I am planning a trip to the UK & was planning on purchasing a scanner (unblocked of course)for myself & i had an idea to buy a couple more to resell here in the US for a few extra bucks. I have more or less been out of the hobby for a year or so & am not up on what is a popular unblocked scanner that would be easy to sell here in the US. I know the importation of an unblocked scanner is illegal.....yada yada yada, but i figure i could recoup some of the cost of my trip by doing this. Any imput would help..........Thanks
James

Thanks for the links! I've used the scanner site for a year now and have
wonder if
they supported Short Wave radios.
A great us of this information is to PREVIEW a radio BEFORE slapping down
hard
earned money for a new or used radio and checking out the fact sheets for
specs can help in the search for a radio that will work in your area,
Another place to get information when looking for a scanner is:

<http://www.strongsignals.net>

Go to the bottom of the TRUNKING board and FREQUENCY board and check out
WHAT FREQUENCIES ARE USED in your town/city BEFORE purchasing a scanner
then, again, compare specifications and match them to radio that best
covers those frequencies . The MODILES section has reviews that supplement
the FAQ at the Shack site.

I see where your coming from.... I still think the price kind of blows... I will be in need of a digital scanner in the near future, and it is definitely out of my price range... :(I'm in Michigan, and as everyone knows, the state system is APCO 25.. Largest in the nation if I recall correctly...

In my area, there is nothing Trucked as of yet, and currently the digital system in my area isn't in operation, at least that I know of. Most of the Upper portion of Michigan hasn't started using the system yet. The towers are up already, however. And when I say up, I mean UP.. Damn are those things tall! Must be because of the hilly terrain. I've never seen a tower that tall before... I think they said something like 2,500 feet tall? I'm probably way off with that figure, but oh well.. The local tower has so many sets of flashing lights, it looks like a Christmas tree..

Try Radio Shack, while they aren't carried in stock by most stores they can have them shipped to
your door. The pre-amps are manufactured by GRE and they have 2 different models, one for base/mobile
and the other for handhelds!

I always like it when they leave something at my front door, don't
ring the bell, and it says on the website that I've signed for it.

You can get one from CRB Books as well... Not sure how the price compairs with Radio Shacks unit as suggested in other posts, but here's a link:

http://www.crbbooks.com/catalog_2/scanner_amplifiers.htm

Part of the page is missing, as the site is set up with frames...

I had a similar situation where I was waiting for a 2nd-day package to
arrive. It said it was in my area but was not delivered on the day is was
scheduled for. My wife doesn't work and she home all day. Checked the
website and it said they tried to deliver it but nobody home. They
rescheduled for the following day.
Spoke with a friend who works for UPS and he says that it's common for them
to do that when they're behind schedule. They do that to show that the
package was there within the 2-day shipping so the customer doesn't call
yelling.

FedEx or USPS guys, it's the only way!

They have a code they put in there to indicate if they left it with a man or a woman (if they didn't sign) if they left it..I've had that happen, where the person (male) claimed they talked to the UPS driver about it being damaged, yet the driver indicated it was signed for by a woman.

Well here's what happened. I live in a townhouse. Rather than delivering the radio to the address on the shipping label, UPS delivered it to the office. Ridiculous, imo since I made sure I was here to receive the package.

Check out Radio Shack, but don't look for scanner amps necessarily.
TV/Cable amps work well, too. I had one here for a while that covered a
good portion of what I listened to on my scanner. The packaging should
tell you what frequencies the amp will cover.

Of course, you will need a few adapters to get the F connectors back to
PL-259, but that loss is almost nothing - relatively speaking.

A radio preamp is designed to receive low level radio signals and
amplify them a small amount. They are designed to be low noise.

Cable amps are designed to receive moderate level signals and amplify
them to even higher levels. They are not designed to be low noise, but
to have high level output.

The two products are designed for different purposes, and are likely to
give better performance in the application for which they were designed.

The scanner acts as if it does not get a signal from the antenna. It acts as if it is scanning but when I press the 'WX' button it only blinks. I have resoldered the external antenna jack and still nothing. It worked fine and I turned it off for a couple of weeks then back on and nothing. Is there a sight etc. where I could get a schematic/manual for the scanner. I have 2 and the other one works fine. When I unplug the antenna from the one that works and press the 'WX' button it also only blinks.. This scanner has a lot of life yet if I can get it to work properly.

I checked the antenna and reflowed the solder. Still nothing. Any
other suggestions. I know a little about electronics from working on
older tube type radios.

My UPS story...

Some lame "credit building" company got my name and address from someone, and shipped me a "credit management" kit, for which they promptly billed me $400... well, thing is A) I didn't order or ask for this kit and B) Though it was delivered to my front porch by UPS one day while I was at work, I never signed for it. UPS wrote down that I HAD signed for it. This company kept harassing me, trying to get $400 out of me. After maybe 50 harassing phone calls, I contacted the Oregon Atty. General, and he told me to ignore them, and if they called or wrote me again, to tell them that a complaint had been lodged against them.... They never called me again after I told them that.. trouble is, they also filed a negative credit report on me that the bureau will not remove.. so UPS ended up costing me my credit.. :(

You should have simply RETURNED the "kit" with proper proof and
documentation and that would have been it. Period.

I bought an R2 and was sadly disappointed in it.
Mine was purchased for MilComms and since I live a mile away from an
airforce base it should have been easy. But this rarely picked it up.
I sold it and now own a RS Pro-60 and it rocks. Picks up everything on
that base. and with another ant. I can pickup the refueling that is
being done several hundred miles away. So skip the R2.

Good thing about the Pro-93, all you need to enter are the data channels (only one active data channel active at any particular time for any one trunked system). Just find a 800 mhz freq with computer noise, enter it in the "MO" mode, leave the bank in the 'OPEN' mode and listen away.

Yes it is illegal but who is lislisting?
Open the CPU compartment cut a leg of diode 513 it could be on either
side of the circute board depending on how old the scanner is. you
can suck out this diode and put in in the empty place where diode 514
would have been to increase scan speeds. it is not much of an increase
but it works and helps some, or you can put in the place of diode 510
and add 100 more channels.400 instead of the stock 300. observing the
same poliarty as the other diodes. if you want both mods just get
1N4148 or 1N914 diodes to put in these places.

The PRO 2052 will only do conventional or trunking i.e.: Motorola and GE Ericsson. However with Radio Shack software
the PRO 2052 will, under software control and your PC dedicated to this application, do both conventional and trunking, at the same time.
Check out the TRUNKING board at <http://www.strongsignals.net> the review of the trunking radios
down at the bottom, below the messaging pain has the complete details, to compare these radios.
The Uniden BC 780 XLT will do all that your interested in right out of the box. It has a computer interface also,
and of course costs a lot more!

Hello,
I am looking for help or advice on a new project. I want to create a site devoted to bringing in information on topics such as scanner modifications, top-secret frequencies, shortwave radio enhancements, antenna building, and other related topics. I would use a free group service such as yahoo groups to make the site serve as a place to post useful information. If I get the site up with in the next week and if I see an interest in the site I will release a monthly online magazine at the end of each month.
I would appreciate any help I could get. Please send me a message with any suggestions to my email address so I can make the site the best place on the web for scanner modifications and other radio related enhancements.

Speaking of UPS, and hopefully bringing us back on topic a bit more, anyone know what frequencies the UPS hub in Rockford, IL is using? I saw on a google search freqs for a motorola 900mhz trunked system, but I programmed that in and heard nothing for a couple days, so I dont think they're using that anymore.

621. Monitoring Cell Phones

Newsgroup: rec.radio.scanner
Date: 2002-01-11 16:06:46 UTC
From: Charlie Durand <charlie_durand@agilent.com>
Message-ID: <1010765230.67601@cswreg.cos.agilent.com>
Source record: 54190

Hey gang,

I know it's not allowed and that new units are blocked from receiving the frequencies used by cellphones but even if they weren't blocked anymore is it even possible to monitor cell phones anymore? When I say possible I mean possible with little or no real extra work on the part of the listener. I don't need to hear that the government can do it no problem. I'm not the government.

I have a scannner than can receive these frequencies and hear junk. I assume it's all the digital phones out there. Way way back in the day when analog phones still ruled the airwaves I could actually hear people. I think the only people still using analog-only phones are my grandparents because "it works just fine for me" regardless of the fact their phone is the size of a shoebox.

My main question is why bother blocking cell phone frequencies anymore since all the phones are digital?

Ok, that's all.

Thanks!

OldRadioGuy et al,

Thanks for the heads up on that link, eyes are getting older, missed that one!

I've also re-done the server to make the online catalog faster by minimizing the SSL traffic to the ordering process and not the whole store itself.

They still block cell frequencies because its the law in the US and not everywhere has the digital capability for cells yet. There are still some rural areas where most traffic is analog.

I agree. Even if there is alot of digital cells. There are still about that many analog. I drove to my old town recently where I lived. They have pushed the digital phase quite a bit. from CDPD terminal's, to wireless internet, to wireless traffic controlled lights, and TDMA, CDMA, GSM cells. But. I was bored and did a scan thru the analog network. almost every channel had activity. I only scanned the basic 666 channels though. Since it is not illegal to scan things like that in canada. As usual. Cells are boring. Not really a point. Who cares if hubby forgot to pick up tampons for his wife and such.

We have all waited a VERY long time for a digital capable scanner.

I suggest we wait until early next year to make our purchase.

The approximate $700 for a scanner and board is is way too much to pay for
this radio.

Let's hold out for a better price.

626. Help from Live Scanner Feed Experts PLEASE!!

Newsgroup: rec.radio.scanner
Date: 2002-01-11 18:27:32 UTC
From: tede911@aol.com
Message-ID: <20020111132732.08079.00001494@mb-fi.aol.com>
Source record: 54196

Hi all,

I currently run a live scanner feed from my computer streamed through live365.com
(www.firstduephotos.com has a link if you're interested)

My problem is this- In addition to running the live365 feed, I want to also play my multiplayer games over the internet using voice comms (RogerWilco, etc.).

I am using broadband now and play MP games (w/o voice comms) and run the live feed at the same time, so bandwidth is not an issue. The scanner audio is fed into my sound card via the "line in" jack. That leaves the "mike" jack free. Yet, when I plug a microphone in, it will not work.

Am I to understand that the sound card is only capable of accepting one mode of input at a time?? Is this true of all sound cards?? or, Am I doing something wrong?? Is adding a 2nd sound card a reasonable alternative??

I have an older computer sitting around and my fall-back option is to set up a home network and run the scanner feed from the old computer and play multiplayer games with voice comms on the newer/main computer.

Any/All suggestions or comments are most welcomed!!!

Thanks in advance!!!

AMEN! I already have my pre-order in with Ham Station!

> I suggest we wait until early next year to make our purchase.

I ask why?

> The approximate $700 for a scanner and board is is way too much to pay for
this radio.

Let's look at how much the BC780XLT has dropped in price, since it came out
a bit over a year ago.

$0.00
Not a good sign for waiting.

> Let's hold out for a better price.

This will be like the very original trunktracker -- a LOT of people have
been waiting a LONG time for this, and holding off a year or two to save
$100 at best is probably not an option.

- Rob

Hi,
I was wondering if anyone could help me with this question. My local P.D. uses an Ericcson EDACS trunked network for their comms. Is there any program that will work with decoding their MDT's, are are these two items totally unrelated?
Just wondering...still trying to figure all this out. Reply here, or email, thanks.

Same thing in Norway were we have the analog NMT 450 Band at around 463-467.5mhz.. Many users, but little of interest.. (Some funny sex-calls though)..

Because of the low frequency this band uses much of useres are hunters or people that live in remote places where GSM Coverage are poor.. We had a similar NMT 900 band that runned at 935-945 mhz but it was discontinued last year because of the GSM..

We still have a analog cordless band running on 959.0125-959.9875 mhz using 25khz bandstep, but the interesting users have changed to 1800mhz DECT phones.. Like mentioned earlier lots of old-timers use the analog system but they are not interesting enough to monitor..

"Ohh i buyed new curtains today!"
"Oh! what colour"..

that kind of talk.. Really nice to hear if you want to sleep though..

I have also recieved several cordless phones on 1.6khz (FM!). These phones have a unbelievable range!. I recieved one 5km away last week using my Aor sa7000 aerial.. Mostly boing sheit, but interesting anyway..

Sorry. abit of topic but im bored to death..

The reason lots of people use UPS to ship is that you can get UPS to pickup at your house for a large fee, and you can pass that on to the buyer by saying, "buyer pays actual shipping!" Well actual shipping to me would be if you get off your ass and take it to UPS or Fed EX, not paying extra $6 for UPS to come out to your house. I have stopped buying items where someone says, "actual shipping" until I get a fixed price.

635. ooh ohh. Aircraft monitors under fire!!

The've announced on the news that a person has been arrested for
posessing an aircraft radio at a hotel near ground zero on Sept. 11th.
Reading the reports makes it look like the very act of owning one of
these radios brands one as being an criminal!!!

You can buy aircraft handitalkies on eBay any day of the week, since
the transceivers are not illegal to own, or nor is it illegal to monitor
air
comms. Does anyone else get the feeling that anyone from now on
who is observed monitoring aircomms will be labelled an terrorist or
worst?

There's no "percentage" of digital systems that work... If it is a Motoroloa Astro P-25 system, not encrypted, it will work. ProVoice won't. APCO16 won't. TETRA won't. It either will work in your city or it won't -- no "partial" operation.

Looks like you read the wrong reports then! He is an Egyptian in a hotel near the WTC, and denied knowing anything about any transmitting radios. If he doesn't know what a two-way aircraft radio is, why did he have it in the room?

And the denial REALLY makes him look stupid, since they found his job is in communications devices with the Egyptian Air Force. He was arrested for lying -- not having the radio.

Makes the story less fanatical -- sorry about that. Just doing my best to nip a snopes.com entry in the bud.

I'm just very confused on how to enter the correct information into the scanner. Here is an example....

1 470.3000
2 471.1500
3 471.2000
4 471.7000
5 471.7500

Talkgroups
02-104
02-102
02-080
02-083
02-082
02-060
02-062
02-042
02-041

I have not been able to figure out where to put any of this information. Do they all need to be in the same bank? How exactly do I enter a talkgroup into the scanner?

I really just need to be walked thru this once. If a kind soul could help, I'd appreciate it.

Thanks,
Rob

And what about the person who lives in a rural area and has to drive 30
miles to the nearest
UPS outlet? Believe it or not, not everybody lives in a huge metropolis and
it would cost you
just as much for the shipper to drive it into the city as it would to have
UPS pick it up. Luckily, I live 1 1/2 miles from a UPS outlet and 1/2 mile
from the post office. I will probably begin using USPS for future
shipments. UPS scares me to death from what I saw when shipping
for my employer.

what I find funny is you have someone trying to say that their phone is digital due to the fact the display is LED or LCD. my girls ma insists her motorola dpc-550 is digital. I had to laugh. But trying to tell someone something different can be hard. I took it in and laugh at it now and then. Lots are dedicated to their antique phones here too. must be nice to receive things on those frequencies. especially 1.6k. I have not yet heard anything there. I have this ooold cordless. Maybe it still uses that frequency. today is friday. maybe scanning will be good today. from .05 - 1300. somewhere there has to be something. decoding is boring lately too. oh well. lol. I could always transmit on these FRS frequencies. One kid constantely pushes the paging button and talks to himself. it is quite funny. Have a great nite all.

Absolutely. It is an issue of credibility. How can you possibly take
anything else seriously after the first lie that you know for FACT is a lie?
Why would you even READ anything else after the first lie?
You read the National Enquirer, don't you?

Matthew Delaney wrote:

> This is common practice in press releases.

Incorrect. For legal reasons, you want the date of the press release to be the date the information was released. In court, a press release with a fraudulent date, to make it appear the information was released before or after the actual date, can cost that company big $$$$ in a lawsuit or stock issues.

It may be a "common practice" to some companies as "auto theft" is common practice to some, but it is not ethical or legal.

How could that POSSIBLE be what happened here? The information was posted to this newsgroup before the date occurred. That has nothing at all to do with your above excuse of not being able to release the information until the later date, does it Einstein?

People found it on the cesweb.org site and posted it here -- Uniden did not do it. CES did not do it.

A simple "sorry guys, I was just making a little trouble for the fun of it" would have been a better response... If you are going to claim that all the websites, photographs, spec sheets and more are part of this "big conspiracy" then you've got a few issues to handle first...

Greetings,

I'd like to thank all of you who visted the website(http://www.sauderelectronics.com) and ordered, what great support the online community has shown for the site and its products. To answer many of you: Yes, the prices on the items are not introductory, they will remain the same as long as our customers(you) continue your great support. I'd specifically like to thank Frank Leaf who was extremely helpful in our online endeavor and volunteered to help with website improvements.

So, with no further ado, I announce our January USENET only specials! These specials are not posted anywhere else(except the website) and were designed for everyone who has supported our effort thus far:

1. Pack of 10 Silver Teflon PL259s for ONLY $8.00!
2. SMA Adaptors, mix and match, 3 for ONLY $10.00!
3. UHF SO239 3" Mag Mount, $2.00 off the regular price of $15.00 for ONLY $13.00!
4. Any order over $25.00 receives a special mystery gift FREE!

Order now at http://www.sauderelectronics.com

Thanks, and 73's

-Ben

If you want your stuff misdelivered, stolen, or lost, that is.

I finally got Uniden America to send a replacement for a "lost" 780 and
specifically requested a signature like I had done the first time.
Well the driver came to my house the expected day,
and instead of climbing the dozen steps to the landing in front of the door,
took about three of them and tossed the package up to the porch.
Expecting him to be waiting there for an ID check and sig,
I opened the door in time to see him running back to his illegally parked truck
(facing into oncoming traffic).
Just as I got the box inside and was examining for (rapid deceleration) damage,
he came running back (all the way to the top this time) with his clipboard for a
signature.
I could have been anyone,
since he merely pointed to the place for a signature next to the printed name,
and never even asked for any identification.
I could have just copied whatever name he indicated and faked a sig.

Both work perfectly! No scratches or dents on either radio. Both come with
original boxes, manuals, antennas.
Pro-2004 has full 800 Mhz....

Selling both as a package for $375 plus shipping

Just did some preliminary evaluations and it looks like it
has good potential.
I will be revamping the channel layout of my scanner in the
near future,
so there will be an opportunity to shake out any bugs.

Hi there,
F/S Commtel COM510 400 CHANNEL SCANNER 500KHz-1300MHz *NO GAPS*
This is a very tiny hand held scanner,I bought this new from Javiation
See for more info and a picture http://www.javiation.co.uk/com510.html
This is the same radio as the Weltz-1000 (400 ch) or Weltz-2000 (1000 ch)
This is an excellent radio overall! (check out Strong Signals Review)
http://strongsignals.net/access/reviews/reviews.cgi?type=display&rtype=rev&class=recv&num=004
It is in like new condition with box and manual.
I am open to serious offers only please on this radio!
Please e-mail me directly at rusty@dccnet.com
Thanks-Russ

679. Configuring BC-245-XLT FOR PC CONTROL VIA Serial-USB adapter

Newsgroup: rec.radio.scanner

From: Michael Bryan <mbryan@magma.ca>
Message-ID: <B865DDBC.70B%mbryan@magma.ca>
Source record: 54050

Hey guys .....

Does anyone 'out there' have experience configuring a BC-245XLT Uniden Trunk Tracker for PC control using Senss' Freeware - "BC245 Interface - (V. 2.0.1) ? ?

Despite properly installing the software and hooking up to my PC laptop running Windows ME using Uniden's supplied interface cable and a Serial DB-9 to USB adapter, I can't get the PC and
the scanner to exchange any data whatsoever - even with no end of changing ports and data rates (2400 - 19,200 baud) etc. etc. The software just keeps saying "Scanner offline." Yes, I've properly followed the scanner instructions to place it in PC control mode.

Could the problem be the scanner itself or Senss' software don't like the adapter and its driver ? The adapter is supposed to be friendly to most Serial and PDA type peripherals, allowing them to be connected to USB-equipped PCs that lack DB-9 male input connectors.

>rural areas where most traffic is analog.

It's likely to stay that way for a while. Despite the Sprint PCS ads silly claims, there are a lot more places where digital is useless than there are places where it works. . They might cover 85% of the population, but if you aren't in a city or on an interstate highway, digital doesn't work at all. Personally I'd rather have a little static & cover the rural places where I'd be most likely to need help than have "crystal clarity" and then nothing at all if I get off the main road and get stuck!

The "Hamtronics" link is an excellent source.

Thanks!

Al

Also,fwiw,I just received my "WinScanRS" ver2.0 that's *supposed* to
work with the Pro2052.This thing has more bugs than Alaska in July!I'm
lucky to keep it running for any amount of time.Come's with two patches
on cd & I had to install both for pgm to even run.Maybe they will keep
the patches coming 'till it works!

I returned mine. It's junk. The only advantage it had over my 7 year old Pro-62 was MilAir band, band search and scan speed. Not worth it.

Also anybody correct me if I'm wrong:

Some old RS scanners have the VERY convenient feature of being able to enter search mode with ONE button. You are monitoring a single channel and you just hit "^" and you scan upward, or hit down for downward scan. I believe on the 2042 it's a bit more steps. Now we are comparing a 7 year old PORTABLE scanner with a brand new BASE scanner!? Ridiculous! Think about comparing any other device like that; a seven year old CD player with one now? A TV? Car? Stereo? I guess scanners are a dying marker like flight simulators(military).

I bought a new 2.4GHz headset telephone (IBM Model-3330). The nice thing about this phone is that it has computer sound card connections (audio in and out). I had heard a while back about people using these things for amateur radio. I picked one up at Sam's Club, made some cables and connected it to my ICOM 746. It works great!! I have had several comments on how good the audio quality was. It even works with the VOX so I can now walk around the house while listening to and talking on my radio. No cords!

I guess this thing can be used with any type of audio source including scanners, shortwave radios, etc. Simply plug the radio audio out into the phone Mic connection and you are free to roam while listening.

While I have not yet tested it yet, the documentation claims 5 hours talk time. Since you must make a connection to the base to listen, this would apply while just listening as well.

Can't speak for the 245, but I do have a little experience with USB
serial ports.

They're not quite the same as a real serial port. I've got a Purple
Computing USB-serial adapter. It works with my PRO-92 and 92ware, but
uploads to the scanner are slower than they should be and I had to do
a little rewriting to the download program.

I tried one of the adapters CompUSA had on sale last week, and it was
pretty much a disaster.

If you have access to a computer with a real serial port, try your
setup on that to make sure your software, cable, etc., work. Not sure
what to suggest after that - update the USB-serial driver? See if
it's supposed to work as a general serial port, rather than just being
compatable with a PDSA? Try another brand?

This is a clever idea which has a lot of possibilities.

Nice to see there are still some hams around who open their minds and
come up with ideas like this.

This idea alone, if fleshed out, would make a good article for 73
Magazine.

Good work David.

Most everything will be narrow. But try listening in narrow, & if the audio
sounds garbled, then switch to wide.

(OTOH - If you are lisening to a narrow signal using a receiver for wide,
the audio will
sound like a wisper)

Cleveland uses a Digital system... sorry... You can't monitor there. You
will have to wait for the new digital-capable scanner Uniden will release
later this year :(

702. Q about entering trunking freqs into a Pro-93 scanner

Newsgroup: rec.radio.scanner
Date: 2002-01-13 02:15:03 UTC
From: Rob Rosenhouse <rrosenhouse@yahoo.com>
Message-ID: <Xns9194D82C44BB5pinballwizhomecom@24.3.128.74>
Source record: 54071

When programming a trunk group into the scanner (RS Pro-93), is the default behavior to stop on all activity on that channel? Do I *have to* enter the talk groups?

What are the advantages and or disadvantages of entering talk groups?

If different town use the ericsson trunking system, but different frequencies, can they (or should they) be entered into the same bank?

Thanks in advance,
Rob

703. Re: WTB - Radio Shack Pro-2042 scanner

Why is it that when I post a simple WTB listing, for an item for which I have my own, personal reasons for wanting, some MORON jumps in with an absolutely ridiculous response, making absolutely NO sense?

I did not ask for a debate on the merits of a 2042 or how it compares to a 62, which by the way is like comparing apples to oranges.

Sheeesh, what a boob.

Dan

There are plenty of non-digital police and fire depts in the Cleveland area using trunked radio. Strongsville and Parma are two cities that come to mind on the west side. Almost all of the east side departments (Euclid, Mentor, etc.) are on the 800 mhz trunked system as well. A trunktracker scanner will help out a lot.

Sad how people take information, twist it around to "make them the victim"
and pass it on.

THE GUY HAD AN AIRCRAFT TRANSMITTER IN HIS ROOM, IN A HOTEL NEXT TO THE WTC.
THEN WHEN QUESTIONED HE CLAIMED NO KNOWLEDGE OF THE RADIO, AND HAD NO IDEA
WHAT THE CONTRAPTION WAS. THEN IT WAS DISCOVERED THAT HE WORKS IN THE
AIRCRAFT COMMUNICATION FIELD FOR THE EGYPTIAN AIR CORPS.

THAT IS WORTHY OF SUSPICION.

The sale and use of an Aircraft band transmitter is fully legal. The
sale of a scanner which can pick up Cell phone conversations is not
legal. Big difference.

>
> From now on, anyone who is observed monitoring ANY communications besides

Acutally its been like that for years. But CNN's reporting of this Air
radio story did not help matters.

I'm a pilot and do own a handheld Air transceiver. they'll take it from
me over my cold dead body....

Here are pictures of my "terrorist training camp".

I have a couple of questions for you grizzled vets:

I put a cb antenna on my car for my scanner. Works ok, I guess, but is there anything I can do to help it out? I use it for everything from 400 to 850.

I have a Pro-26, a -90 and a -94. My -26 seems much more sensitive (more range and clearer) than these other two newer and fancier scanners in all bands (esp the 400's). Is it a radio characteristic or my newbie imagination?

BTW, this group needs a FAQ to keep we newbies quiet and orderly.

depends on what frequencies you want to listen to
Mobile phones are 820-850 (mobile or handset radio) and 869-896 (tower/base)

for antennas to work WELL, they should be a multiple of the wavelength of the frequency you want to listen to ie 1 wave 1/2, 1/4, 1/6

300 divided by frequency in MHZ gives wavelength in meters for those USA/non metric people 39.36 inches are in a meter

a 900.0000 mhz frequency has a wavelength (WL) of 1/3 meter

a 150.000 mhz frequency has a wavelength of 2.000 meters

ok, a 900mhz antenna will receive 150mhz signals but it is NOT DESIGNED or OPTIMIZED for 150mhz or 2.00 meter signals..... a 450mhz antanna WILL receive 900mhz signals because both are wave multiples..... a 1/2 wave for 450 is a 1 wave for 900

in general the lower the frequency, the longer the antenna is required for BEST reception.

michaeldr1 wrote:

get police call
ther are national APCO codes but some vary from department to department

example Arizona DPS/HIghway Patrol 10-15 = paperwork or package

Maricopa County Sheriff 10-15 = prisoner in custody

From: JA Moran <jamoran@analon.com>
Message-ID: <3C41A7B4.FCFBF51A@analon.com>
Source record: 54095

IN the Phoenix Area and also in Southern Ca and the SF BAy, I've found MANY analong calls. In some cases if a phone can't acquire a digital repeater frequency, it will switch to analog mode.... there are alos plenty of analog phones still in use...

Sometimes, I will let people listen to cell phone calls to prove to them that waht is said on a mobile or cell phone is NOT PRIVATE, I tell them that they have a radio and transmit radio signals, a scanner receives radio signals.......

I usually don't give out banking or credit card information via a mobile, I do that via a land line

in the USA mobile phones are 820-850 for mobile and 869-896 for the towers and about 1950mhz for the PCS and digital phones. ther are also IMTS phones that use 35, 151, and 454mhz frequencies.... today, most of what you find here is pager traffic. the Sky page uses 928 and 929mhz frequencies.

Used by the Air Force? I doubt it. The JD-100 is a mediocre
scanner at best. Gets clobbered with intermod and images in
any metro area, has no search function and has only 20 memory
channels. Ho hum.

I have had several scanners that kicks it's ass such as the
Pro-26, Pro-43, Pro-60, BC-3000XLT, IC-2 and AR-8000.

But I will admit the JD-100 is novel in that its the only
scanner that covers civil and mil airbands exclusively and it
is inexpensive.

That's pretty neat..
My Fire Dept. runs on both VHF and 800MHz trunking..the volunteers are
paged out on VHF and the main city stations run on 800 MHz Mot II.
trunking.
I run the (VHF freqs) audio out from my SC200 to the left input channel
of a digitally synthesized FM transmitter I built and the 800 MHz trunked
stuff from my BC245 to the right input channel.
Antwhere around my property I now listen to both channels (stereo) on
any FM stereo reciever. I just picked up a superlight Sony FM stereo
headset radio so I can wander around, listen to both freq. bands and not
drive my wife nuts with all the paging racket etc. Hey in bed I just
listen to my cheapy FM clock radio tuned to my FM transmitter.
I also have an FM reciever pluged into my computer's sound card and live
stream the audio so as to pick up all my calls at work.

Get a life Viper, all he asked for was for a Pro-2042, not a
incoherent rant on which scanner is better. If you had done your
homework, you would learn Dan has been on this newsgroup for
many years. Dan and I have been buying and selling scanners to
each other for 5 or 6 years here.

Trust me, he KNOWS about scanners which you obviously you don't.
The Pro-2042 is long out of production and not a "a brand new
BASE scanner" as you put it. The man wants a Pro-2042, not your
advice. Really now, did his post didn't say "WTB" Pro-2042 and
while you're at it, tell me why I don't want one". You called
him a moron for reading your reply to his post. Like he won't
read replies? Get real...

Speaking of people skills, go back to school and slap your
teachers for not teaching you spelling and grammar.

The JD-100 may indeed be inexpensive at $157, but the optional
accessories certainly aren't.

$50 for a DC adapter & $75 for an AC adapter is just a bit steep. Those
prices come from the current Sporty's catalog on page 110.

For sale, a like-new Sony Wavehawk ICF-SC1PC scanner. This is a general coverage scanner (minus US cell bands) that covers from 25 - 1300 MHz, AM, WFM, and NFM. You can use it as a stand-alone scanner, you can program memories and scan ranges from your PC, and you can operate the radio remotely from your PC. This unit is in mint condition, just like new in original box with all accessories, PC cable, ac power supply, software disk, frequencies disk, etc. There is not a mark on the radio, and it works perfectly. $175 + shipping from 20164. Email if interested. Thanks.

Euclid is on : F1, 423.375 Dispatch.
F2, 423.600 Alternate
F3, 423.850 Spec. Ops.

Most Eastern suburbs of Cleveland, that are in Cuyahoga county, use the 420 band. All of Lake county is analog 800 trunked.

Well, it doesn't have all of the fancy ring tones, do-dads, etc. (stricktly for the kids), and weighs a ton. I happen to own 2; and don't have the need to keep it glued to my ear, or enrich the phone company. One sits in each car and makes about 3 calls a year.

I just dug out the manual for old times sake. What a surprise -- it's title is:

Digital Personal Communicator (DPC)

Hank

Really, and you are so much smarter by freely giving out all your personal info:

Schneider, Mark X
7XX N DXXXX CXX
SXXXXXX, OK 7XXX5-7107
(405)3XX-9XXX

Born: March XXth, 195X

Not very intelligent, especially for someone who claims to have worked at a police department!

At your age, you should know better. Sorry if I don't choose to give out all my personal information to all the trolls that lurk on newsgroups, not that any of that is relevant to the subjects being discussed anyway! Try to keep on topic, and take more of an interest in what is being said, rather than the poster's name or email address which you don't need to carry on a discussion or debate.

I sure wouldn't try and piss off anybody here after being so free with your personal info, the next guy you try to piss off won't be as nice as I am.

yes. actually all you need is the control channel progged for mot type 2. of course if your system's control channel rotates then you'll need all freqs in the rotation progged.

> Do I *have to*
> enter the talk groups?

no

> What are the advantages and or disadvantages of entering talk groups?

advantage? locking out groups you're not interested in when using closed mode.
disadvantage? well the most obvious one is if you don't have the ids stored you can't alpha tag them but other than that i guess there really is none.

> If different town use the ericsson trunking system, but different
> frequencies, can they (or should they) be entered into the same bank?

no. as is clearly stated in the manual you can only monitor one type system in a particular bank.

> the PCS band in the 800 - 900mhz range? Thanks for your info.

I think the Sprint PCS cell phones (they don't like to be called what they
really are) are in the range of 1.9 GHz
Just grab an old portapack cell phone (800 MHz) from a thrift shop or junk heap
to do 800 - 900 only scanning.

Consider that your results on lower frequencies will likely be degraded more
with one of these antennas,
than the 800 - 900 reception will on a longer multipurpose "scanner" antenna,
if this is your only scanner, and is expected to cover other services.
I have an old bc235 that I use exclusively for the local PD trunk system and
the cell phone duckie is what I use on it.

In our own case, here in twon, there was some experimentation with 800mhz portibles in fire service. The command car on scene would have a downlink to the 154 mhz linik. Worked pretty well... imagine it; In effect, everyone on the site had a 75 watt transmitter in the size of a pack of smokes.

This is a very tiny hand held scanner,I bought this new from Javiation
See for more info and a picture http://www.javiation.co.uk/com510.html
This is the same radio as the Weltz-1000 (400 ch) or Weltz-2000 (1000 ch)
This is an excellent radio overall! (check out Strong Signals Review)
http://strongsignals.net/access/reviews/reviews.cgi?type=display&rtype=rev&class=recv&num=004
It is like new! with box and manual.
$150 plus shipping
Please e-mail me directly at rusty@dccnet.com
Thanks-Russ

In addition to horrible grammer and spelling, you obviously cannot read
either. I think Jon VanAllen said all there was to say about your "help".

We would be VERY happy if you went away.

then don't YOU be a moron and read my >post.

This is quite difficult when I make a post requesting information, it makes sense for me to read the responses, doesn't it. Think about what you said for a minute. Even though I specifically asked for them via e-mail.

> Be smarter and just wait for someone
>to post meating your exacting standards.

This makes no sense in the English language, unless of course you are translating from Swahili.
The word "meating" does not exist in the English language. Proper spelling is MEETING.

> Here's some more stupid MORONIC "FYI" info: What >requesting "FREE"
> information don't insult the people who might waste >thier time HELPING
you

Here we go with that troublesome English language and spelling again. BTW, I wasn't asking for FREE information, dummy. Learn to read. Oops, I forgot, you obviously can't!

> who obviously don't deserve it since you have no >respect, and probably
like to say things over the Internet that you say only BEHIND people's
backs in
> life!

Wow, are we in serious trouble in this country. Illiteracy is alive and well. How can you make such a statement when I post with my FULL name, and do not hide behind an anonymous lable such as "VIPER?"

>Grow up and learn some people skills. If you are a teen, >then I apologize
as you are still "growing up".

Well, it sure takes one to know one, however, although I yearn for my teenage years, I am regrettably not a teen.

> I did not ask for a debate on the merits of a 2042 or how it compares to a
> > 62, which by the way is like comparing apples to oranges.

> That WAS my point.
>
Oh really? Hmm, maybe I should go back to school then, because I MISSED it.

Listen Pal, quit while you're ahead. Continued responses will only add fuel to the great folly I am having here over your unfortunate illiteracy. Thank you for your ill-fated attempt at educating me about the pitfalls of a 2042 Vs. a 62, despite the fact that I never asked for it....

;)

I can just see it: the OldSalt Scuba Safety Sausage Inc. Divers line up to have the treatment with the enlargement machine to be converted to safety sausage sold to the diver. The beauty of the operation is the diver supplies the material for the safety sausage. Low overhead. Only your labor of love.

I'm not sure what, if anything, the newest revisions to band allocation will
bring,
but the old catch all ISM band (902 -928) already included Amateur (our 33 cm
band) along with monitors, telemetry, part 15 devices etc.
As for 70 cm, we have a shared use of that band with the military (ship board
radar),
so that band probably won't get commercialized very soon.
2m is nowadays the entry band for most amateurs,
and with continued heavy usage, it won't likely be commercialized either.

Hi!

I was wondering if there is a modification for the Pro-2022 to change the steps on 400 MHz from 12,5kHz to 5 or 10kHz.

I'm afraid this is "hard-coded", but you never know.....

Thanks in advance!

Peter Hunt

There once was a genie
with a ten-foot weenie
and he showed it to the girl next door.
She thought it was a snake,
and hit it with a rake
and now it's only five-foot-four.

781. Mobile antenna

Newsgroup: rec.radio.scanner
Date: 2002-01-14 06:28:34 UTC
From: Billy <whg33takethisouttoreply@home.com>
Message-ID: <mUu08.1622$B21.379352@news1.rdc1.fl.home.com>
Source record: 53950

I have a question that is probably stupid, but im gonna ask anyway. I have a radio shack pro 25 hand held scanner, and I wondered if I could use a mobile mount antenna (to use in a vehicle) in order to pick up broadcast as opposed to the antenna that is on it (I will probably have to get a different connector to plug the antenna to the scanner, unless it comes with the right connector)?

Sorry if this is a silly question, but I just wanted to ask

Thanks,
Billy

Source record: 53951

Not a silly question at all. Yes, you'll ALMOST always get better reception on your handheld scanner in a car if you use an external antenna. The metal of the carbody blocks a lot of the radio signals from getting to your scanner with just the built-in antenna.

The best bet would be to use an antenna specifically designed for the band you monitor most, but since most of us listen to stuff on all bands, a "multi-band" antenna is generally preferred. I've had overall good luck with a mag-mount scanner antenna that Radio Shack has been selling for years, their "Magnet-Mount Mobile Scanner Antenna" Cat.#: 20-032, which sells for about $30. Check out http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F001%5F002%5F007%5F000&product%5Fid=20%2D032

or just go to www.radioshack.com and enter the catalog number - 20.032 - in the search box. It has a BNC antenna connector, which is far and away the most common scanner antenna jack.

The only major common downside to an outside antenna, and the reason I said "almost always," is when you're in a high radio-frequency area, like downtown in a large city, or very close to a transmitter (especially pager) site; in these areas an external antenna will sometimes pick up so many radio signals that the scanner has trouble differentiating between them and gets "overloaded." When that happens to me I simply unplug the outside antenna and use the "rubber duckie"

Hey don't criticize me because I have more than half a brain to realize how DANGEROUS it is to be putting my personal information on the WEB. Now that's stupid. If I was half the asshole you are and were willing to waste my time . . . oh the things I could do to you. FYI the Internet is NOT as anonymous as you think, unless ofcourse you are using an anonymous PC(which you are NOT). So becarefull what you say, cause the next guy might not be as nice. You see I was on the NET before you even knew what it was "what's an Internet??". Back in the days before "The rest of the world" started using it. The days when you had to actually have some sense to be able to use it. So it's always nice to see young kids like you running around here like you belong here.

This wouldn't be you would it???? I see it's definitely NOT personal and this is just the way you were raised . .. I'm sorry you never got over your childhood.

T�tulo: Re: New Uniden Digital radios
De: dconti@nj.rr.com

Hey "Bud"

If you would get your head out of your ass and learn the English language, I was referring to the two new newsgroups for these radios that James stated he added to YAHOO Groups. I went there to find them, and they were not yet listed.

After reading the past fifty million posts all over the internet with the press release, I am aware that the radios themselves are not available yet.

Duh.

Dan

Can police detect that you have a scanner inside your vehicle? I own a bearcat handheld and enjoy listening to it driving back and forth to work with it. A friend of mine told me when he wife was working in the motorcarrrier division that they had something that could detect whether or not you were driving around carrying a scanner with you. Is this all hogwash or what?

I have some neighbors around me that have analog 900 mhz child monitors in use. Found both of them in the low end of the band and are clear as a bell !!!!

> I had to reset my AOR1000 and now the frequencies appear about 5 MHz
> lower than they should be. (i.e. A signal of 100 MHz is received when
> the display is only 95MHz)
>
> Anyone got any advice on what perhaps I can do to retune it?

It sounds like you have used the WRONG reset information :-(

For the AR1000 use the following:
http://www.aoruk.com/1000bull.htm#ar1000 reset

For the AR1000XLT, AR1000XC and AR2000 use the following:
http://www.aoruk.com/2000bull.htm#reset

Regards, Richard - AOR UK LTD

To my knowledge they cannot detect you have a scanner or not. Since a scanner only receives, such as a FM radio in your car to begin with, I cannot see them being able to detect just a scanner.

I know in Canada they can tell if you have a radar detector, but that is because they are illegal and a scanner is not.

With the Collins optional filters the AR5K+3 is nearly equal to R8B
for HF. R8B has edge because of great pass band tuning feature.
For VHF/UHF the AR5K+3 scanner is equal to/better than Pro-2006.
AR5K+3 has CTCSS but not DCS. Also AR5K+3 won't do Trunking.
You have to decide what you want to listen to and what priorities are.
If single unit wide band receiver is a must then AR5K+3 is unbeatable
(yes it's better than R8500 on both HF and UP performance-wise.
R8500 sucks on HF because of poor {lack of] filter selections.)
However, separate high end HF and high end scanner (eg BC780XLT)
will get you better dedicated performance for less money. But you wind
up with 2 radios rather than one.
Good Luck!

>I'd like some comments on the preformance of the AR5000+3. In particular
>those owners that can compare it other higher receivers they have used... HF
>and VHF/UHF.

This begs the question, what happens if something is shipped as opposed to carrying on their person? Seems that if it is shipped via some form of parcel post, that problem may be alleviated. Dunno if it will work, but just a thought.

One other thing you'll want to check out... Make sure it's LEGAL in your area to use/possess a scanner/scanning receiver in your vehicle... There are a number of areas/states that it is illegal in...

Hello

I'am from belguim here isn't any dealer but I've an ARO 3000a buy in
the Netherlands

The scanner works perfect for recieve:
But on NFM between the freq.100.000 mhz 200.000 mhz . It makes a
interfering noise
only when it had recieved a channel a left again
This its makes only on NFM and a little a WFM

is that normal
Can someone give advice ??
Thanx before
sorry for mistakes my knowlege of english is verry poor

NOTE: there is a print into placed for automatic started a tape recorder
can that be cause of the probleem

Don't believe me? Try walking around an airport with a scanner and headphones.
Tell me what happens.

I have done this MANY times, previous to 9/11. Never had anyone bother me or
even ask what I was doing. I wouldn't do it now. Would you?

The assumption would be made that, since I had a scanner, I would be up to no
good.

first. most scanners use a commin IF frequency. There are lots of other things inyour car that could generate it too. But i have not heard of them being about to yet. What I don't understand. It is not illegal here in Canada to own or use a Radar Detector. There is only 1 - 3 provinces that have them banned. Manitoba is one of them. I am not sure of the other ones. It is definately NOT Illegal for a Radar Detector in British Columbia, Alberta, or Saskatchewan. I know those three forsure.

I was hassled by a security guard at SeaTac walking around with a Pro-
43. The 43 was still being sold at the time. Doesn't matter because
you said "From now on, anyone who is observed monitoring ANY
communications besides broadcast radio will be labeled a terrorist or
worst."

That is extreme and typical of the right wing alarmist that for years
have been screaming big brother and the sky is falling upon us.

> The assumption would be made that, since I had a scanner, I would be up to no
> good.

Assumption and no good are far from "From now on, anyone who is
observed monitoring ANY communications besides
broadcast radio will be labeled a terrorist or worst."

Yes, in all my years of scanning I have gotten curious looks from
citizens and more than curious looks from security personal when
walking around them with listening to a scanner. It is normal and it
is the job of the police to check out what doesn't seem normal. I
guess one can take it a step further and believe they will be thinking
the worse about you when they stop and talk to you. It would be the
smartest thing to do. They don't know you or what you are up to. Why
not assume you are bad news and protect yourself. Are you pissed off
when the cop walks to your car to discuss your driving with his hand
on the but of his revolver? Are you pissed when they scan your luggage
because they assume you are carry something you shouldn't. Angry when

they make you walk through that metal detector because they assume you are carry something you shouldn't. Do you scream when they ask you to turn on your pager/camera or computer because they assume it doesn't and is a bomb?

Give it up. From now on, anyone who is observed monitoring ANY communications besides broadcast radio might be labeled suspicious. So what? I am glad these folks are doing their job. If it saves a few thousand lives it is okay with me.

Glenn

Sorry, I meant to say Ontario not Canada as a whole. In Ontario it is
illegal to posses a radar detector and OPP have devices to detect them.

It also does not matter if you are from out of province either, they will
seize the detector and give you a fine.

You're really making yourself look stupid Viper. Dan and I have
been on these newsgroups for many years, you are obviously a
newcomer who doesn't know squat.

We have been through this horse shit with a lot more people than
you, so don't bother telling us about how stupid it is to post
your real identity. The answer is still the same: people like you
who hide behind phony IDs are cowards, period. And people who
don't have the common courtesy to use spell checkers are just
plain stupid, but we already knew that.

You are the adolescent one here and you will notice that nobody
is coming down on your side of this argument because this is one
argument you are NOT going to win! Now climb back into whatever
slime pit you crawled out of and leave the rest of us alone.

When somebody shows up at your doorstep we will see who is the stupid one. You NEVER put anything personal on the web unless you are a retard. And if somebody has to point that out for you, then you keep your mouth shut and not encourage them to step on your little glass house. You've been on this newsgroup for years???? So what? Newsgroups didn't even exist back in the day, but you wouldn't know about that being you're the newbie.

I'll never win this argument? I don't compete with kids thank you. I like a challenge, and you guys are just rude kids.

I did use the reset method described on the page you sent me but I figure I "bumped" something to knock it around.
I've heard some info about fiddling around with one of the three trimming cap's - do you have any info about this?

I don't believe you.
I live not too far from sky harbor airport here in phoenix and I routinely meet people there and I wear a scanner and headphones. I was asked only once what it was and I gladly showed the officer (even let him listen in).

Its not a big deal and so far, I've only been stopped once. I am also a licensed ham AND I also server as a vollunteer with the local Police Dept. Auxiliary.

as for government trampling on our rights, well, there is a very fine balance between the rights of the people and the security of a nation.

Hi,

Another Pro-2022 question...

Does anyone know how to adjust the frequency??

The problem is that I'm decoding an EDACS-trunkingnetwork, which controlchannel switches between 466.8200 and 468.800 MHz.

468.8000 is no problem, but instead of 466.8200 my scanner tunes to 466.8250 due to the 12.5 kHz steps.

No I want to try to decrease the frequency a bit, so that the scanner will be tuned to approximately 466.8225 and 468.7975, hoping that'll fix the problem.

To legally use it here in Florida in a vehicle I would have to get a amateur radio license (but I had planned to get a HAM radio anyway, so thats not necessarily a bad thing) but that shouldnt be too hard to get (long as I can pass the examination for it).

818. question on noise cancelling headphones

Newsgroup: rec.radio.scanner
Date: 2002-01-15 01:49:55 UTC
From: johnnyseattle@excite.com
Message-ID: <66b5cf2b.0201141749.29299b52@posting.google.com>
Source record: 53989

Do noise cancelling headphones only cancel external noise while you are listening to your scanner (fans, engine noise, etc.)?

Or will they cancel a buzz, hiss, or other white noise being transmitted by the source you are listening to (transmitters with grounding problems or other constant noise emissions)?

Thanks for taking the time to read and respond.

No. But if they pull you over and you aren't a ham or public safety, and they see it, $$$...

Pretty stupid for ANYONE to get caught since you can get a permit for free -- the application is even online!

Lemme put this on the table, just for discussion. What about that whole thing of not rebroadcasting amateur radio transmissions on non-amateur bands (i.e., the 2.4GHz cordless telephone "band")?

The thought just hit me that this might be the same thing. I know that rebroadcasting non-amateur radio transmission on amateur bands is not allowed (except in the case for example of NASA's ARC here in Cleveland who got special permission to rebroadcast live shuttle transmissions in the 144 band). Does the inverse apply, like in the 2.4GHz phone example? Perhaps it does not apply to devices intended as telephones, since amateur radio repeater telephone patches are legal - and by definition might also wind up being rebroadcast on the land-line end via cordless phone. Maybe public wireless telephony (i.e., cordless phones) are an exception even though they are radios on non-amateur bands.

Regardless, it's still a very cool idea.

Doubtful. This law in generally used to confiscate radio equipment from people who listen for emergencies, then race in their vehicle to the scene to watch and listen (and most times interfere with or at least annoy) police and other folks trying to handle the problem. Most areas have this law.

They attempt to cancel external noise. They have no effect on noise
which is part of the "signal".

Geauga County is on an analog trunked 800 system. Can be trunk tracked, but
I just scan the 10 or so channels.

Live in Solon, which is regular 400 band repeater.

It might be "very possible" to detect the presence of a scanner in a car, or it may be just slightly possible, or very possibly it's moderately possible.

As someone pointed out, today's cars have a lot of electronics that give off rf radiation, so I doubt that any kind of "scanner detector" is highly possible any time soon.

A scanner is much more likely to be detected if, for example, you and/or your car is seen repeatedly at the scene of police/fire calls, if you have it in plain sight (or listening range) of a police officer, if you have multiple antennas visible, etc.

Other than avoiding those pitfalls that can occur anywhere, if you're unfortunate enough to be in Michigan, get a hold of the State Police and request an application for a "Permit for use of Short Wave Receiver in Vehicle," under "Section 750.50B, MCL of 1970 as amended." I know, police stuff is very possibly never broadcast on "short wave" frequencies any more, but this permit lets you listen to police frequencies in a vehicle - except for police radar frequencies.

I have one, my wife has one, and my 8 year-old son has one. And we live in California; I've never driven a vehicle or ridden in anything but an Amtrak train within Michigan, but I'm all set...just in case.

The best way to avoid having your scanner very possibly or even remotely possibly detected is to listen from a distance...like your home or office, or at least don't butt in.

IMHO

>
> The answer, to a large degree, is directional arrays.

No, because RR's, despite being long & skinny, don't tend to be particularly
straight; and where they're not straight is usually in the rough terrain where
800 coverage is worst. It's easy to design a radio system for UP's main line
across Nebraska (for example), it's a lot harder in the Green River canyon
around the Wyo/Utah border. (*)

>> To
>>implement an 800 MHz system with the same coverage level as the current
>>VHF system would require the RR's to install roughly 5 times as many
>>tower sites.
>
>Of that, I have no doubt. Yet, this would be less than the sites
>needed to m,aintain an 800mhz system for your averasge metro police, I
>should think.

Takes around 40 sites for a largish metro area (some are receive only, since
the base startions have higher power than the portables). UP has something
like 6000 miles of mainline, and you'd need a site about every 4 miles to get
comparable coverage to what they have with VHF (they currently have sites
about every 20 miles, I think). So that would be roughly 1500 sites, or rather more
than a typical metro area...

John

(* note that directional antennas do work well with the 900MHz ATCS system,
but that is because both the base and the remote radio are fixed in location,
so the antennas can be carefully aimed at each end.)

826. forsale AOR AR8200 full version MINT 475.00US shipped

Newsgroup: rec.radio.scanner

for sale:

In mint condition

AOR AR 8200 full version no gaps pocket scanner

0.5 - 2040 mhz

1000 channels

computer controled

alpha display

can take a card for ctcss search and input, card for delete tones, bursts
and beeps, card for up to 4000 channels, card for decrambling speech
inversion.

has programmable scan - when to resume, listen for voice, sensitivity,

has all the modes am, sam, fm, cq, usb, lbb wfm, sfm
has all the programmable steps
has 2 vfo controls

this is a sensitive scanner with great selectivity

one of the best conventional scanners around - this is a professional
wide range receiver

has dc input, earphone, computer control

comes with car original car adapter, original wall adapter, rubberduck
antenna and ferrite rod antenna, batteries and manual. I cannot find the
box.

This is a continious receiver - no gaps, pickup cellphones, military fighter
jets etc.

MINT condition and express shipping included
475.00US

I found this on a google search for scanner laws and chose the first
one.

Here's the link

http://www.afn.org/~afn09444/scanlaws/scanner5.html

it says michigan is illegal without an FCC license, or permission.

I know here in Kansas I wait for a policeman to ask me. I'll just whip
out the old Ham ticket and there we go.

I believe broadcasting of any sort without a license is not allowed unless the power is below a certain level. I dont know exactly what that level is but Im sure it's in milliwatts. The idea being it shouldnt interfere with your neighbors.

a much more creative offering than playing around with sausages all
day. Yikes !!! I might joke about sausages ......but I don't
wanna get involved with them !!!

840. First of 4 Ham Radio Antennas Installed During Lastest ISS Spacewalk!

Newsgroup: rec.radio.scanner
Date: 2002-01-15 07:28:10 UTC
From: allanstern@aol.com
Message-ID: <20020115022810.09733.00001394@mb-cq.aol.com>
Source record: 53908

Here are three excerpts from a recent Space Station press release from NASA-Johnson Space Ctr that should make a lot of us happy. Now all we have to do is ascertain the freqs they will use on the new antennas.

AL STERN Satellite Beach FL

==========

Commander Yury Onufrienko and Flight Engineer Carl Walz floated outside the International Space Station on the first spacewalk of their expedition and finished installing a second Russian cargo boom, part of which had been delivered to the station two and a half years ago. With coordination help from inside the station by Flight Engineer Dan Bursch, the two space walkers also installed an amateur radio antenna on the Zvezda Service Module. . . .

Onufrienko and Walz also installed an amateur radio antenna on a handrail at the end of the Zvezda service module. The antenna is one of four that eventually will allow space station crew members to make Ham radio contacts from the comfort of their living quarters inside Zvezda. Currently, the amateur radio station is inside the Zarya module. . . .

The next spacewalk of the expedition - to be conducted by Onufrienko and Bursch - is targeted for Jan. 25. The plan for this spacewalk currently includes installation of the remaining three amateur radio antennae and thruster deflector shields on the end of Zvezda.

If it is an AR1000 with crystal 2nd oscillator running at 154.825MHz, the error would be in the region of up to 10kHz, not a few MHz. You clearly suggest a difference of 5MHz... is this correct, you don't mean the figure LEFT of the decimal (MHz), not the figure furthest to the right of the LCD (which is kHz) ??

Alignment of the 2nd oscillator etc is described in the technical bulletin section of the AOR UK web site:

http://www.aoruk.com/1000bull.htm#align

True. The track bending is less o a problem in some areas than in
others, though,. And even there, a limitation on range here seem to me
a blessing as cells are designed. My thought is that the cost
effectiveness of such a system comes down to the cost of the
individual cells... and that's one question I've not got the answer
to. I can't imagine that the cost factors would be similar to that of
say a higher power VHF system. Indeed, I could see the costs on such
things being along the lines of the cost of a cell phone, once unit
volume becomes a factor.

In discussing this with someone here locally, the idea that the sites
need hosuing was brought up.

Well, it's tre, but I don't know as that's so large a deal, since the
size o these units tends to be quite small, as are the power needs.
Again, more or less that of a cell phone. Seems to me that existing
buidlings along the ROW would suit admirably for most situations, And
signal bridges and masts would serve as towers. Since in CTC areas,
such equipment is placed along the tracks at 1 to 2 mile intervals,
(and since that seems to be about the range for these lower coverage
-per -cell systems) this seems a natural. All that's needed at that
point is landlines to tie them together... and what class one ROW
doesn't have that?

> >> To
> >>implement an 800 MHz system with the same coverage level as the current

> than a typical metro area...
>

But not more on a per-square mile covered basis, and in some cases,
less, I should think, depending on the terrain. And again, it seems to
come down to the issue of cost per downlink site.

Now, in all of this, I've been considering the east, and it's type of
terrain, and it's frequency congestion needs. You rightly point out
that the west is a vastly different sitaution terrain wise, and I
would add, radio needs wise.

Well, you could buy two of them. :-)

It's 500 channels. 510 if you want to count the weather channels,
which you can reporgram via Win92 or 92ware.

The full channel number is the bank followed by the channel within the
bank. The next channel after 149 isn't 150: it's 200. The channel
before 1000 is 949.

Source record: 53918

** Note: I live in Canada, where it is legal to listen in on cell phones.
**

I have two questions about the Cell Trak software:

1) Can it be used with Motorola America series brick phones? If so, how?
I partly disassembled one and the innards did not resemble those of brick
phones described in Cell Trak files describing how to connect Cell Track
to brick phones. The America series phone I have does not appear to have
a PC interface.

2) I have heard that Motorola Micro Tac flip phones which have keypad test
mode (as opposed to "short-to-ground" test mode) cannot be used with Cell
Trak, but I was wondering whether recently anyone has discovered a way to
circumvent this obstacle.

As the gentle reader might have surmised, I have examples of two such
phones in my possession; hence my questions.

Regards,

Ian Douglas

I'm curious. What specific law did he violate by lying about the radio?
It's against the law to lie about your identity, but lying about
knowledge, or lack of knowledge, of a "radio"?

Come back from Hollywood please ;> I've been to hundreds of fires in my life, with scanner in hand, and have NEVER seen an incident where the police / fire were interfered with by someone else holding a scanner. If anything it's usually the distraught residents trying to get back in to grab something.

In any case Michigan has had this law for ages. If you are pulled over for a traffic violation, and any scanner is in your car (doesn't need to be operational, can have the battery pack off and stored in the trunk, etc doesn't matter) you will very likely get a ticket.

Hey Richard
Be VERY VERY careful here.. you need to know EXACTLY what you are doing with this realignment, I would not even entertain the idea without the proper equipment, fine tuning tolerances are crucial on the Aor1000, one wrong turn and it will be F****d for good....AOR won't charge you the earth to do it for you, you then have peace of mind.

A scanner is simply an ordinary radio that usually has a wider coverage than your domestic radio and has the ability to tune itself up and down the frequencies and stop on one it finds active by using the Squelch setting, basically that's all they are.
All the rest of the functions on modern scanners are simply technical extras to make the enthusiasts life a little easier.

I suppose if you are a criminal Norm, yeah, good advise. OTOH, the rest of us law abiding citizens will do what we always do. A cop questions us regarding an investigation we just answer truthfully and then go on with our lives. That is the advantage we have over criminals and the paranoid.

If you have nothing to lie about it doesn't become an issue.

Correct?

I am interested in purchasing a new nearfield receiver such as the Xplorer.

I imagine that a number of you have or have had experience with this unit.

May I kindly ask for your opinion's on performance - operation - reliability

Also I've received mixed info on the ability to unlock the 800Mhz range -
what have you been able to do in this area?

TIA

Good advice if you're not a criminal. An "alleged" criminal is under no obligation to make the governments case. Cops know this, and try to get the "alleged" criminal to talk, and talk and talk. Miranda kicks in after an arrest and before questioning.

> OTOH, the rest of us law abiding citizens will do what we always do. A cop
> questions us regarding an investigation we just answer truthfully and
> then go on with our lives.

Answer truthfully, of course, but only what you're required to answer. The supreme court has ruled that it's OK for cops to lie during an interrogation/investigation, (except under oath). An "alleged" criminal is under no obligation to make their case, and has specific rights, before and after an arrest. The time of an arrest is sometimes critical.

> That is the advantage we have over criminals and the paranoid.

Criminals and the paranoid have the same rights. That is the advantage we enjoy.

> If you have nothing to lie about it doesn't become an issue.
>
> Correct?

Not necessarily. It's exactly that kind of thinking that ever so slowly erodes our rights. Bringing this to light does not make one a criminal or paranoid. Just vigilant.

Which is our obligation.

While picking my kids up from school today I was listening to the local Sheriff. I soon realized they were chasing someone through the woods, following with a helicopter and 4wd patrol vehicle. They were chasing a guy in a 4wd chevy tracker, and he was makin them earn their pay today. He was only a mile or so away from me, so I held tight and hoped to see some action. I could see the chopper over the woods, and he was cuttin left and right, and finally lost the Sheriff's 4wd truck. A ton of squad cars flooded the little back road the school was on so I really got to see some action. I parked at the corner of the main road and another back road. Before I knew it, here he came. He turned right beside, I mean I saw the guys face. He was as calm as ever, just runnin from the law. He turned from there into an orange grove then back out on the road, where they got him with two stop sticks. He then went back into the woods with flat tires, got stuck, tried to run, and was quickly caught with the K9. All this over drugs, he had a duffle bag full of cocaine. It was like the whole reason I bought my scanner happened right there inside a 30 min period. I WAS PUMPED. Anyways, hope this gets someone else as excited as I was...

If you really want to listen and follow a conversation then you do need to buy a trunking scanner. A regular 800mhz model will work but it will not follow a conversation when the freq rotate, thus one sec you will hear police, then the next you will hear the dog pound.

From: Charlie Durand <charlie_durand@agilent.com>
Message-ID: <1011130620.450415@cswreg.cos.agilent.com>
Source record: 53939

Hey there,

I have been listening to the cops on my scanners for a very long time now. I currently have two BC200xlt's and another Uniden base model something something... An old old model with 40 channels, don't remember the model number right now which is strange but anyhow.. they're all old radios. They still work so I can't complain.

I want to get something that covers more bands though. I'm thinking about buying a new scanner. I want to get something cool since it's been 10 years since I've bought anything other than a new battery now and then. I want to know if it's worth it to get a trunking scanner for the San Francisco Bay Area. I hear plenty of stuff with my scanners right now and wonder if if would be worth it to "upgrade" to the latest and great Uniden has to offer. The Trankmaster series.. I'd be tempted to get one of each if there was interesting listening to be had on the trunked systems.

Otherwise I want to get something along the lines of the AOR8200 so I can control it with my computer and take it along with me when I feel like it.

The bottom line of my question is: If you listen to trunked systems in the SF area what do you hear? You can email me directly if you don't think the rest of the group wants to hear your replies.

Thanks!

If you didn't break up what I said you might understand it. The
advantage is the law abiding citizen can tell the truth to a cop and
walk away. A criminal can't or he will be arrested. See the advantage
now or did I untwist your version of what I said too quickly?

What did you bring to light oh savior of the free world? You complained that an Arab staying near the WTC got busted because he lied to the cops about having an aircraft HT transceiver and lied about himself. How did your chicken little routine prevent an erosion of our rights?

Glenn

Police CAN (In theory) detect your scanner!

If you tune an ordinary FM radio to ex. 99.8mhz and take another FM radio
and tune it fast up and down over this frequency you`ll hear the first radio
go click.click,click..
(Youll have to be very close though..)

I used this trick in my youth to irritate my sister when she taped songs
from the radio.. She tuned in on 93.4 mhz and taped this very annoying AHA
song.. In the meantime i (the devil brother) was in the room besides hugging
the wall and tuning like hell!..

"MMMOOOMMMMMYYYYY!!!" hehehehehe!

So all you need is a highly sensitive reciever that can listen in on veeeery
many frequencies at the same time and a directional aerial. As they close in
on the scanner they will hear these little *clicks* over the frequencys that
the scanner scans and tune you in using the antenna..
(In theory)

Though i dont think the police would bother with this..

I wonder what NY portables are doing with thier scanners in public? Are we: keeping them "Top-Secret", simply keeping the volume low, or doing what we want but looking out for police, or just simply doing whatever the hell we want?

Personally I need it for my job and local PD either asume that or know that, but I still generally keep mine "Top Secret" to avoid suspicion and/or stupid questions. I'm ALWAYS "wired" so you will never hear anything from my radio. I still get funny looks sometimes when I change channels/volume etc.

Yeah I know, and it sucks but that's the "game" in this niche market! Those jerk-off manufacturers get away with this EVERY day. Nearly $400 for a scanner that scans 5 channels/second?? I WILL however accept that MAYBE, JUST MAYBE I'm the asshole who doesn't know didly about how scanners/receivers are made. I mean I'm technical enough to be able to read and follow schematics, or to know how CDs record using lasers or to know generally how scanners operate but my technical aptitude doesn't show me how hard it is to scan as fast as 7 years ago with $150 product.

Is it that because of all the added expense of extra technology(1200 channels/VFO) to keep the unit reasonably priced they used a less expensive scanning circuit?? My problem with that is that I would THINK that whatever technology they use to scan with would be dirt cheap any way you look at it; 30 channels/Second or 5 channels/Second.

I guess the question is: What really makes a scanner "scan". What exactly allows a scanner to alternate it's frequency, and is this expensive?

881. Ontario Unlisted Frequency Guide

Newsgroup: rec.radio.scanner
Date: 2002-01-16 01:05:33 UTC
From: John Medica - Listening-Post <medica@cyberspace.org>
Message-ID: <3C44D1DD.F9D60C57@cyberspace.org>
Source record: 53850

Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbists who are frequency hunters. You will find lists of Ontario radio frequencies that are not listed on any web page, published in any scannner book (Haruteq or Scantrix) or listed in the government frequency list (Industry Canada's TAFL). This list is all based on research and the patience of the people who contribute to this web page.

I didn't complain about anything. I asked what law he violated by
"lying" about a radio.

> How did your chicken little routine prevent an erosion of our rights?

It shone the light of truth on MY rights. Something that people like you
attempt to steal from me under the guise of "If you aren't doing
anything wrong, you have nothing to fear".

Well, you've just hit on another issue with designing a radio system for RR use - the extremely low traffic density on a typical piece of railroad. A normal radio system will have many users per site - a loading of perhaps 40 users per site would be in the ballpark. A railroad might have 2 (at VHF. If it were at 800 MHz, the number of users per site would be fractional)(*). For a normal site, the cost of the stations is low in comparison to the cost of the subscribers. For the RR, it's the opposite, so it's desirable that the system minimize the number of sites needed.

>Now, in all of this, I've been considering the east, and it's type of
>terrain, and it's frequency congestion needs. You rightly point out
>that the west is a vastly different sitaution terrain wise, and I
>would add, radio needs wise.

There's another issue: railroad equipment moves all across the country (and into Canada & Mexico). The radio in the locomotive has to work everywhere, so the radio system design has to be suitable for anywhere on the continent.

John

(* obviously in railroad yards the situation is reversed, but that makes up a fairly small percentage of RR mileage).

I get to have some fun with my scanner(s). I have an agreement with one of the local TV stations. Since i live closer to a lot of stuff than their station is, i get there faster. I bring my camcorder and take shots of major wrecks and house fires and they pay me for each clip i send in. As long as i don't get in the way of the Fire or Police department and stay a little back, they don't say anything.

That's the one!

Maybe the person is trying to order the entire display unit rather
than the EL? I still think the parts may be the same.

Anyway, if he does get a hold of one.....Here's a great URL for a site
that has compete instructions on doing the fix. Its not as hard as I
had imagined. http://home.cfl.rr.com/scan/Backlight.html

Oh, so now honest law abiding citizens are trying to steal your rights.

Just because you are paranoid doesn't mean they aren't out to get you. Right?

You have more rights now than you ever did.

Glenn

887. Antennae on BC780xlt questions

Newsgroup: rec.radio.scanner
Date: 2002-01-16 03:35:55 UTC
From: Go_Slow <slow_go@hotmail.com>
Message-ID: <Xns9197DA4536613slowgohotmailcom@216.166.71.230>
Source record: 53856

Newbie scanner enthusiast.

My new BC780 comes with a telescopic antennae. I am about
35 miles from a PD Tower ~800Mhz that was weak but I could listen
ok. About 10 miles away is DFW Airport. I can pick up
the planes on the ground and towers on some days but
usually not. My local PD is ~450Mhz and they are weak.

I bought an "all band" disc/cone Radio Shack antannae.
I mounted it on a pole about 15 feet high.

The 35mile away PD tower can no longer be heard. The
planes and tower can now be heard strong. The local PD
now comes in strong.

According to the freq response diagram on the RS antennae,
it is fairly flat with no adnormal problems in the 800Mhz and
up range.

Questions:

Is it normal to expect this? The RS antennae seemed to be made
of quality materials. Not sure about the design.

I realize finding an antennae that works superior in all ranges
is not practical. At least at the $70 I paid for the RS antennae.

Should I expect better reception with the telescopic that comes
with the BC780 than the RS unit. I would have thought a coat
hanger would have been as good.

How about the antennae wire. I am using RG-58 that is marked for
HAM/CB usage. Is that were I screwed up? It is a 50 foot lead.

Should I expect to use a switch box that selects an antennae based
on the freq's I am listening to ?

Thanks ahead for any answers or ideas.

Hi Mike,

I am sorry because I didn't answer.
Here is the problem, if you use Windows XP looks like something in XP is not like in win. 9x or 2000
On 9x and 2000 the application handle the ports w/o problems but on XP is the problem you found.
I wish I knew why the problem is,... but right now I have no idea. I don't have XP on my home computer so I can't reproduce the
error.
Today I got an email from another user of AFS780 who had same problem like you and after some tries on his side he found this:

<Ron Poserina Jr. email>
I got it to work by unloading my Palm Pilot hotsync conduit from COM1.
Then it worked fine on COM2. I guess if COM1 is busy, it stops?
</Ron Poserina Jr. email>

and he have XP too.

I hope you will be able to make it work too.

best regards,
-avraam

Yep, I think that's the problem! RG58 is not recommended on
400 MHz and higher.

I think you'd better try RG213 (or other low-loss coax) for
better results on 800 MHz.

Good luck!

>The 35mile away PD tower can no longer be heard. The
>planes and tower can now be heard strong. The local PD
>now comes in strong.

The coax you use is more important that the antenna.

For maximum signal into your radio, you need at least RG213,
and Belden 9914 or LMR-400 is even better.

>How about the antennae wire. I am using RG-58 that is marked for
>HAM/CB usage. Is that were I screwed up? It is a 50 foot lead.

That coax is losing over 80% of the signal before it gets to the radio.
That's almost certainly the problem.

>Should I expect to use a switch box that selects an antennae based
>on the freq's I am listening to ?

No need, once you have good coax on the current antenna.

RG-58 is a killer at 800 Mhz! It simply is too lossy. You might want
to try some good RG-6. It is low cost and relative low loss. But, you
will probably need adapters from the TYPE-F connectors on the RG-6 to
the connectors on the radio and antenna. A short (2 or 3 feet) piece of
RG-58 can be tolerated if you want a more flexible cable at the scanner.

You haven't shown it.

> > You have more rights now than you ever did.
>
> Baloney.

Start with Miranda and go on from there. Compare the case load of the
ACLU and it's impact on the judicial system. Look at the rights given
minorities and minors.

You on the other hand use a terrorist being arrested by the cops for
lying to the police about having a aircraft HT, lying to the police
about what he was doing and who he was is an erosion of our rights. He
wasn't even a citizen of this country yet you se it as an erosion of
our rights?

I know chicken little. The sky is falling! The sky is falling!

Glenn

> ACLU and it's impact on the judicial system.

That won't show the complete picture. The entire U.S. population has
slowly been loosing their rights since the 60's, and they never went to
court. They lost them by accepting regulations and laws in the name of
"drug control", "the children", "environment", etc., etc., etc.

> Look at the rights given minorities and minors.

At whose expense?

> You on the other hand use a terrorist being arrested by the cops for
> lying to the police about having a aircraft HT, lying to the police
> about what he was doing and who he was is an erosion of our rights.

> He wasn't even a citizen of this country yet you se it as an erosion of our rights?

1. He was here legally.
2. The act of 19 terrorists has taken away and in other instances
severely limited our rights, including an authorization of the military
to shoot down civilian aircraft. Something they've wanted for the last
10 years.
3. Because of the terrorists, we will loose more rights, in the name of
terrorism, security, etc., etc.

Using your logic, the acts of these terrorists should not affect our
rights, but the fact is they do, and will continue to do so.

> I know chicken little. The sky is falling! The sky is falling!

The only one hollering "The sky is falling! The sky is falling!", is
you, and other liberal left wing whacko's.

Discones are a proven design.

> I realize finding an antennae that works superior in all ranges
> is not practical. At least at the $70 I paid for the RS antennae.

For all the common "scanner" ranges, the discone is about the most
practical.
I had a RS version about 15 years ago and wasn't impressed with the
use of hollow elements for the conical section and lack of top element
to extend the frequency range. I believe the RS version now comes with
the loaded top element like the Diamond always did.

> Should I expect better reception with the telescopic that comes
> with the BC780 than the RS unit. I would have thought a coat
> hanger would have been as good.

It's what's between the radio and the antenna that's killing your
higher freq reception.

> How about the antennae wire. I am using RG-58 that is marked for
> HAM/CB usage. Is that were I screwed up? It is a 50 foot lead.

This is most likely where the higher frequency attenuation is
happening;
try to get some RG-6 in as short a length as you can get by with.
Even the full 50', if you have to, will generally be better than the
58.

> Should I expect to use a switch box that selects an antennae based
> on the freq's I am listening to ?

This will introduce some more losses,
better to get a good antenna (the discone is good) up high,
and use better coax.

Here's a link that will take you to Amazon.com's music downloads section where you can get a free copy of Jonathan Bickel's rousing rock guitar instrumental dedicated to the troops in Afghanistan. You'll love it!

Get it at: http://artist.amazon.com/jonathanbickel

Hint - the picture shows Jonathan in front of an A-10 Thunderbolt. Should give you an idea of the power in this recording.

It's intended to be enjoyed by any and all of the US Armed Forces, as well as civilian supporters, so, if you like it, please post the link to any appropriate newsgroup or any other Internet venue.

More background info is available at:
http://www.johnbickel.com/jonathan.htm

Thank you and God Bless America

First off, insects have antennae. In radio we use antennas.

You experience with the discone is strange. I would guess you have lossy coax since the higher freqs are coming in worse than with your telescopic antenna.

What kind of coax are you using. You should not use RG-58. RG-6 is good. Make sure the connectors are properly installed. How long a run of coax are you using? Is the discone mounted outdoors? How high?

The discone should certainly outperform an indoor whip at UHF.

Oh, I see. Miranda was just a little blip on the human rights radar in
this country. Before Miranda the police everywhere treated people the
same they do pre-Miranda. Especially minorities. Tell me about it
Norm.

> The entire U.S. population has
> slowly been loosing their rights since the 60's, and they never went to
> court. They lost them by accepting regulations and laws in the name of
> "drug control", "the children", "environment", etc., etc., etc.

How do you have less rights with drug control?

The children, yep, they can't work in factories, you can't beat
them,etc., etc., etc. What other rights are you speaking of children
have loss?

Environment, yep you can't dump dangerous chemicals anyplace you like,
you can't put workers in dangerous environments and risk their lives.
There are certain chemicals you can't put on food or I the air etc.,
etc., etc. Which rights here are you talking about?

> > Look at the rights given minorities and minors.
>
> At whose expense?

Bigots and racists I would suspect. Why do you have a problem with minorities and minors have the same rights as you Norm?

> > You on the other hand use a terrorist being arrested by the cops for

>
> 1. He was here legally.

Yes but there you end. Did he have the right to lie to investigators? What right did he lose here Norm? You seem to love cliches and one liners but come up really short on facts.

> 2. The act of 19 terrorists has taken away and in other instances
> severely limited our rights, including an authorization of the military
> to shoot down civilian aircraft. Something they've wanted for the last
> 10 years.

Who is this mysterious "they" that have been fighting to get authorization of the military to shoot down civilian aircraft? Last 10 years? I don't recall debate or controversy during Ronnie Rayguns last years to do this. Refresh me with some actual details of the facts Norm.

> 3. Because of the terrorists, we will loose more rights, in the name of
> terrorism, security, etc., etc.

So what are you saying Norm? We need to pull airport security? Back off on the borders? We shouldn't hassle the people connected to these 19 terrorists because we infringe upon their rights? Do I understand you correctly? Do you believe this country is at risk from an outside terrorist, you did hear about WTC didn't you?

> Using your logic, the acts of these terrorists should not affect our
> rights, but the fact is they do, and will continue to do so.

Don't put words in my mouth Norm. The acts of these terrorist will and SHOULD affect our rights. That happens during war time or right after the moment of realization you have done a piss poor job of national security.

> > I know chicken little. The sky is falling! The sky is falling!
>
> The only one hollering "The sky is falling! The sky is falling!", is
> you, and other liberal left wing whacko's.

That makes no sense. Because I don't agree with your alarmist chicken little routine I am a left wing whacko? Because the country with its democratic process has done something you don't like we are all whacko's taking your rights away.

Got a news flash for you Norm. You seem to be the minority here. This isn't a dictatorship, monarchy but a democracy. If you don't like it

get out and change it. Problem for you is "since" the 60's most people have quit listening to your McCarthy-like paranoid dribble.

So in closing Norm. I and most Americans will shed not a tear for you poor little Egyptian hero with air traffic experience who had a aircraft transceiver in a hotel near the WTC and lied to the police about it. Go ahead and put him on your pedestal and cry and sob how his rights were infringed. That is your right. Tell us again he should have walked and not be arrested. You right Norm. Then in the same breath call me a whacko. Still your right. You are wrong but its your right and possibly your destiny to be wrong.

Glenn

Shane, I am glad you were entertained...The price of your joy could
have been very high.

If you watch any of those TV shows with Cop and Robber chases, you see
very often wrecks that occur with innocent citizens. Sometimes you
even see the criminal leave his damaged car and car-jack someone
elses.

You had your children in the car you you knew that trouble was heading
your way. Maybe I love my children too much, but I think I would have
headed the OTHER way lickity-split!

I never said that. Quit putting your words in my mouth.

> Before Miranda the police everywhere treated people the same they do pre-Miranda.

Miranda didn't just come out of someone's ass. Read the history behind
Miranda first, then engage your mouth. Law enforcement sure didn't offer
Miranda to us law abiding citizens out of kindness and fairness. We got
Miranda because of police abuse.

> Especially minorities. Tell me about it Norm.

What do you want to know about minorities.

> > The entire U.S. population has

What a bozo. Search and seizure, asset forfeiture laws for starters.

> The children, yep, they can't work in factories, you can't beat
> them,etc., etc., etc. What other rights are you speaking of children

I'm not saying children lost rights. I'm saying we lost rights in the
name of children. Remember your buddy Slick Willie?

> Environment, yep you can't dump dangerous chemicals anyplace you like,
> you can't put workers in dangerous environments and risk their lives.
> There are certain chemicals you can't put on food or I the air etc.,
> etc., etc. Which rights here are you talking about?

Pretty disingenuous. For starters, how about not washing you car in your
own driveway, children suing their parents for child abuse, prohibiting
children form saying the pledge of allegiance at school, nativity scenes
prohibited at the town square, Santa Clause prohibited from showing up
at the town parade, wetlands rules enforced buy the federal government,
excessive use of the eminent domain statutes, U.S Governments stealing
of property under the asset forfeiture law, etc., etc., etc.

> > > Look at the rights given minorities and minors.

> Norm.

Do some research on the proposed Federal Shoot Down Law. Call A.O.P.A
for starters. Just because you don't recall doesn't make it false.

> > 3. Because of the terrorists, we will loose more rights, in the name of
> > terrorism, security, etc., etc.
>
> So what are you saying Norm? We need to pull airport security?

No. Do airport security in a way that will solve the problem. So far,
it's all window washing.

> Back off on the borders?

No. That's shutting the barn door after the horse has left, isn't it?

> We shouldn't hassle the people connected to these 19 terrorists because we infringe upon
their rights?

I have not advocated hassling anybody.

> Do I understand you correctly?

Doesn't sound like it.

> Do you believe this country is at risk from an outside terrorist,

Yes.

> you did hear about WTC didn't you?

Yep. First hand.

> > Using your logic, the acts of these terrorists should not affect our
> > rights, but the fact is they do, and will continue to do so.
>
> Don't put words in my mouth Norm.

They were your words, Glenn.

> The acts of these terrorist will and SHOULD affect our rights.

In a positive manner. Taking away our rights in the name of national
security is wrong.

> That happens during war time or right after the moment of realization you have done a
piss
> poor job of national security.

Short term loss, not permanently.

> > The only one hollering "The sky is falling! The sky is falling!", is
> > you, and other liberal left wing whacko's.
>
> That makes no sense. Because I don't agree with your alarmist chicken
> little routine I am a left wing whacko?

You keep hollering chicken little and "the sky is falling", not me.

> Because the country with its democratic process has done something you don't like we are
all
> whacko's taking your rights away.

Yes.

> Got a news flash for you Norm. You seem to be the minority here.

Got a news flash for you Glenn. You won't determine that.

> This isn't a dictatorship, monarchy but a democracy. If you don't like it
> get out and change it.

I'm trying. It's left wing whacko's like you that I have to overcome.
And I will.

> Problem for you is "since" the 60's most people have quit listening to your McCarthy-like
> paranoid dribble.

> So in closing Norm.

Oh good, you're done.

> I and most Americans will shed not a tear for you
> poor little Egyptian hero with air traffic experience who had a
> aircraft transceiver in a hotel near the WTC and lied to the police
> about it.

Neither will I. But I will question the process. Keeps people like you

> Go ahead and put him on your pedestal and cry and sob how his rights were infringed.

How did you come to this moronic conclusion? Just what are you afraid
of? The truth?

> That is your right. Tell us again he should have walked and not be arrested.

I never said that. Nice try, but quit putting your words in my mouth.

> You right Norm.

Absolutely.

> Then in the same breath call me a whacko.

Have you been paying attention? I have called you a whacko, more than once.

> Still your right.

Agreed.

> You are wrong

You told me twice that I was right. Are you still confused?

> but its your right and possibly your destiny to be wrong.

It's my right and destiny to question things I believe to be wrong.

Yes it's a blast. Think how the families of those officers feel when they hear such action on there radio. Wondering if there husband, father, brother, wife, sister - you get the message is coming after work. I've been there, i'm retired after 30 years and it's not fun being in that sort of position.

We should remember that our law enforcement officers put their lives on the line for all of us on a daily basis. And because of their dedication to their job, they command nothing but respect and a big vote of thank from all of us.

He also mentioned aircraft listening. The Ringo ranger is optimized at 146 MHz and 445 MHz. He's not going to get the gain you quote except in the amateur bands.

He's a newbie. I don't think he wants to have three or four different antennas. The discone is a good all-around antenna for scanning.

> Look into 9913 or LMR400 cable, RG6 and RG11 can work in a pinch with a little
> higher loss than the 9913.

The LMR cables are good but not cheap. I've heard horror stories about 9913. The air dielectric combinied with flexible jacket leads to water vapor infiltration. 9913 is great when it's new or if it's used indoors. But for outdoor use, losses will increase over time. For scanner use, RG-6 makes the most sense.

Get a ham ticket. Or move to North Carolina where it is not illegal on a
state level to have
a scanner in your car. I am under the impression that those states that DO
have this law are
in the minority.

I think most locales have laws to discourage "ambulance chasing" or repeatedly showing up at
the scene of wrecks and fires. I know most agencies don't appreciate the extra traffic and
spectators that are generated by people that follow the cops/fire trucks around. I, too, have
been annoyed by people showing up where they don't belong. Civil Air Patrol also uses certain
scanner-receivable frequencies, so we use code words designed to prevent the listeners from
learning the progress of whatever mission we are on. Or we use frequencies that don't lend themselves to "average" scanner listening. Keeping people out of the way of crash scenes and
otherwise protects, not only the instant investigation, but the would-be spectator as well.

Um, what if the "first" radio isn't scanning? If it is on manual, it
wouldn't make those barely
audible clicks. Lots of times when a scanner enthusiast (not suggesting
that they do this) comes to a scene, he would lock onto the "tac" frequency
in use, wouldn't he?

A better suggestion would be to use a good quality RG-6 cable if it is
for scanning only.

Randy

Public education system?

Regardless, now the score is:

Glenn 1

Norm 0

Whoops sorry Norm. Give me another great retort and I'll let you have
the last word.

Glenn

Just wondering if anyone has an answer. Scanned all freqs (from 2002 police call)assigned for police use, also all trunked freqs assigned to the local parish for a week and haven't heard anything that sounds like police traffic. Just public works calls mostly. Could they be transmitting on something not listed?

RG-6 is merely adequate, what I recommended is what you need
for the MAXIMUM signal into the radio.

928. Where to mount scanner in 2000 Ford Explorer Sport

Newsgroup: rec.radio.scanner
Date: 2002-01-17 00:19:30 UTC
From: Terry Begley <tbegley@home.com>
Message-ID: <r7ob4us43ftk5jhhmh083r7cepm4a8tg2a@4ax.com>
Source record: 53799

Looking for a place to mount my scanner, a Uniden BC 760 XLT, in a 2000 Ford Explorer Sport. The vehicle has a full console (can't block the cup holders), can't install it on the right of the console (passenger seat slides forward) and can't mount it on the back of the console (radio and temp controls). My leg would hit if I mount it on the left of the console. Ceiling is out as it has a small console and a moonroof. I may be able to mount it to the left, under the steering wheel, but that blocks the plug for the computer diagnostics. Anyone mounted a scanner in an Explorer like this? Looking for suggestions, thanks.

929. Using U.S scanner online

Newsgroup: rec.radio.scanner

This is an indirect "scanning question". There is a website called US SCANNER ONLINE. You can "read" the magazine...past and present by downloading it.

Only problem..it comes zipped...when I open it it creates multiple files on my c drive...creating a mess of files! I can read it...but I just gotta think all these files that get created...must be wrong! Can anyone who uses this...walk me thru the ...easy way to read the US SCANNER ONLINE? Seems to contain some nice information!

Thank You

Terry,
With my ham radio, I velcro tape on my dash borad and also put it on the
radio mount and then ran the wires to the fuse box, hiding them under the
dash board and using a tyewrap around the steering colum.
That way I can move the radio so it won't be seen when I am parked some
where, also I can unhook the wires and unscrew the cable.
All you see is the velcro and some wires. It took me about 10 min to
complete the job
Hopes this helps.

Being a retired railroader, this thread just reminds me of all those
railfans we used to see hanging around the ROW all ga-ga eyed over a
freight train. They were easy to spot: striped
overalls, striped cap, red bandanna, and fake "railroad" pocket watch (the
kind with the steam
train picture on the back). I swear, it was as if some of them would start
foaming at the mouth
at the sight of a train! LOL! Usually, we would answer their questions
politely, and then snicker
at them behind their backs and call them names. Like "train queers" and
"National Railway Hysterical Society" because they got so beside themselves
at the sight of a train. And, of course, they hung on every word that came
from their requisite scanners hanging on their sides
as if to copy those of us who had to carry the things with us. Ya oughta try
crossing thru a cut
of cars with one of those old Motorola "lunchbox" radios we had in the '70s
with the handset
on top--along with lantern and switchlist. And, oh boy, those guys just HAD
to tell us how to
do our jobs according to the gospel of Trains Magazine. Again, they were
treated politely in
person and avoided if we saw them FIRST! And, Lordy! Heaven forbid there
come a steam
excursion to town (prior to their abolishment)! One time, NW 611 was in
town and it was nec-
essary to turn it around on the wye. There must be some sort of "radar"
that tells fans that the
company was about to move a steam engine because when the engine backed down
the wye,
people appeared out of the woodwork. Now, the track supervisor has another
problem. Here
he is, walking 611 around the tight radius and watching to see that 611
doesn't go on the ground, or spread the gauge, signing the engineer slowly
back, and he's got a whole "crew" of
wanna-be, striped capped, scanner-totin' geeks standing on the rails in the
way with flash bulbs
goin a mile a minute! Now, I can understand how this would be, not only
aggravating, but dan-
gerous, so this track supervisor in no uncertain terms let loose a vitreolic
string of obscenities
telling those blanketty-blank, f******, sunufab******, GD, bastards to get
the hell off his right

of way before he has the dicks to haul 'em off. The engine had to stop
while these people were
cleared off the ROW. When the move resumed, the engine wouldn't handle the
curve AND the
slight upgrade from a standing start, so it proceeds to slip down sand not
withstanding and pro-
voking another diatribe about railfans! There is something about a steam
engine slipping its
drivers that brings out the worst, most maudlin behavior amongst what I call
the militant railfan,
or the rabid fan. We learned that a railfan would KILL you if you get in
the way of their quest
to get that episode on film or tape. It then became necessary to have a yard
switcher to reach in
and finish the move. All because of those "pesky" fans. LOL! I mean no
harm and I am not
a fan-the railroad provided me a good living and a decent pension and I
never could understand
the often obsessive interest people have about trains. However, I do know
that familiarity often
breeds contempt, and being out on the yard on the third trick while railfans
came to watch the
Amtrak train at 3 in the morning did nothing to increase one's admiration
for railfans! LMAO!

Jerry

Yes Eric, it was I. I'm one of the "user" agencies, forced from analog into using the new digital system. Mentor is self dispatch, but digital as far as fire. Lot's of MDT being installed for law enforcement county wide, keeps radio traffic down to minimum to and from dispatchers. That in itself attenuates listening pleasures. :-)

There are plenty of public safety trunk systems to listen to in the bay
area; it is definitely worth it to have a trunk capable scanner.

well for all its worth, I could have only ran away down the road he passed by me on. They had the rest of the other road blocked with stop sticks. I did protect my kids by having them off the road, away from where he could hit us in any bad way. He would have had to get out and walked over.

REMOVE ISPAMMAIL for reply
Building a scanner is impossible because they rely heavly on the CPU which contains the freq info burned into. WinRaido and Icom both make computer scanner on PC cards. I guess I shouldn't say impossible. Creating the CPU program layout is about $50,000, but once you do that they're very cheap to produce. If you got the business plan and capital, go for it. If your thinking about doing it for yourself you might have some problems.
William

No. The scanners required the APCO card, and only two scanners are planned (handheld and base.) No computer scanning.

I think he means that inlieu of a APCO radio or an APCO radio with card, can a radio send the data received to a computer to complete the decoding processes?

I think he is thinking of digital radio such as that of packet radio or a stream of data to be processes/decoded/transformed to audio or text.

Alright I got one for you. You are not the first person to tell me about this CPU issue, so if the CPU is the thing slowing down so many scanners then are you saying that a product like WinRadio can scan significantly faster than a stand-alone scanner?

Maybe we need to make scanners more modular. How about creating an interface that allows the scanner to use mini-computer(PDAs/PocketPCs) to augment it's own processing power for faster scanning speeds, and while you are at it why not add additional controls, or simply remote control operation from 3rd party CPUs. There is also the upgrade route. You want to sell scanners in a certain price margin, then do that, but make it CPU upgradeable. So rather than buying a $700 portable scanner, you buy a $400 scanner and then later purchase a $300 CPU STANDARD upgrade. Standard means you can use the upgrade on most other scanners also.

I've always desired a remote control scanner(exists?) anyway. In this world where there is SOOO much fuss about scanners, they need to be as invisible as possible, so the idea of NEVER taking out my scanner in public but only using the mini remote control clipped to your waste to: scan, lockout, priority, manual and maybe volume, squelch and limit search. I think a LCD with frequency information would also be obvious.

I AM a law enforcement officer. My wife is also. 12 years each.

I see "its a blast" is wrong wording. Its exciting. With new laws itself stating that an officer may be liable for continuing a chase, its better to let the helicopter follow. We then coordinate take downs once he parks, runs or goes into his house.

You can't say that it isn't exciting. If you aren't, then you shouldnt't be there as well. Excitement/adrenaline enhances your senses. I have been scared *&%$-less many times. Fear is a good thing also to let know your safety buffer. As soon as you feel no fear, its time to get off. Being now with 12 years, you learn alot more about how to think of the chase as of stopping it instead of continuing it to simply continuing to follow.

Its very rare that a chase occurs for me. I see as much as the possibility of appraoching a call and not knowing whats behind the door, car or ANY object. ANY scene can turn sour REAL quick. I see myself, there are many many scenes that turn bad vs a chase insuing.

I learned that law enforcement may have seeemed a good career choice to begin with. Now with the problems with a scene, the liabilities and the accusation that go along with it, its not all it was. I am sure that your style of policing in the time you had are MUCH different than the style of policing that we now have to perform. Basically now, if we write a ticket, we have a good chance of having a complaint filed (on avg 40%) and may even be labeled for such actions as a simple "no insurance, red light/stop" or any other violation.

It is now VERY difficult to police without the problems a simple contact may be.

Another officer once had a complaint to settle a distrubance between two neighbors. One neighbor made a complaint saying the officer was NON-BIASED and that he did not take any one persons side in the distrubance. The complaint was sustained! I thought we were to be non-biased in any conflict? sheeesh!

<venting off>

Please do not let this thread continue. I never get on the newsgroups to talk shop and but I needed to respond as wordy as this became.

Bearcat 855XLT 800mzh scanner with original manual and power supply.
Works great and in very good condition. Used very little.
Desirable date code OH1B(1990) which I've heard means it can be modified for
full 800 mzh coverage.
Frequency coverage: 29-54Mhz, 108-174Mhz, 406-512Mhz, 806-956Mhz.
Asking 150 shipping included OBO.

I downloaded one of the files, they are an .exe file, like he said, make a new folder on your desktop and download it to there.

I must admit, it's a very sloppy way of putting together an online magazine.

Try it. This will work for ya.

Hi
it's a big job.. but i had a 89 eddie bauer bronco. in the middle of the 2 seats was a very large center console.... with lot's of room in it.... so i went to work.. i installed a fannon scanfare scanner(old scanner) a cobra cb radio.. AND a motorola maxtrax (used for 2 M)it was tight but it worked... ran wires UNDER the carpet .... fire proofed the wires.... and then ran my antennas.. the whole job took the weekend(with breaks) but i was happy... yes the antennas on the roof told theives that there was radio equipment inside but they could not be seen... i used the factory am/fm for my scanner... only used(vhf/vhf low) then for the cb i had a whip on the rear bumper then for the 2m rig i used a ANTENNA SPECIALIST antenna.. forget which one..
that's my story.. i hope that gave you an idea.On Thu, 17 Jan 2002 00:19:30 GMT, Terry Begley <tbegley@home.com> wrote:

Source record: 53824

That remains to be seen. Given that Uniden is (apparently) having to pay royalties to APCO for each digital card sold, I expect that the other scanner makers will wait to see if the sales justify the expense of tooling up. Notice that not all the manufacturers have even come out with trunking scanners, I suspect that digital scanners will remain exclusively Uniden for at least the next couple of years. None of the others have even announced that they are planning such a beast, much less provided a time frame for introduction.

Only time will tell.

Mark

Hello all
Anybody using scancat gold with XP or NOT using XP? i'm having some
problems and would like to know if it's me(which it probabally is
beacuse i tried " winscan too with little or no success")
1. whole files vanishing w/o a trace after"saving them"
2.bank tag's and fleet id's vanishing too.
3. if "description" is the kind of agency(police fire etc) what is the
" bank tag id" for?
4. thanks Gig.

I do have to say, I respect greatly what all the LEO's do around here. I also give them kudos for how they handled it that day....they stayed back, let the chopper watch him, them got his ass with stop sticks....which was cool too see. I enjoyed that more then all the chases I have ever seen on TV.

The officers kept things safe, and I kept to my little spot where I just happened to have a good view of the action. Thanks to all those that protect us while we sleep and play.

Great!!
Do I get a free ticket to Canada if order the book or do I just get the
steak knives.

What the hell does this have to do with Ausatralian scanning or am I
missing something?

Have i got this right?

Youre experiencing a "open squelch" sound when the reciever leaves an active station?.. Is this phenomen occuring only while scanning or can it occur while tuning over an active channel aswell?..

And this is only happening in channels that are within 100-200mhz?

Hmmm...I wonder if that applies only to somthing marketed as a radar
detector; X band radar is just above the amateur 10GHz allocation, and
K is inside our 24GHz allocation, so technically, an amateur receiver
for these frequencies with a good signal strength meter for these
frequencies would be a radar detector...

I suppose you could, but you'd have to purchase the APCO specs and write a
decoding program to do same. Considering APCO25 has been around for a few
years now, and no one has done it, I'd place wagers that it's nothing easy.

Hello John

yes that's right

there isn't a difrence between scanning or tuning (100 ﷽ 200 mhz that's
about it)at only
on NFM , AM is excellent
I can tell you I've remove this print for started and stop a tape recorder
I was narly sure of this the cause of the problem
But I was wrong , everything is still the same like before only I can't
connect
a recoder,but that's not important

also I am waiting for a new antenna (log periodic) and a new coax (aircell
7)
maybe can that give any solutions.

Whith peasure your opinion

thanx before

one more time sorry for the mistakes (english)

SSB radios will work, the specific designation is ACSB for Amplitude Compandered SideBand. It's basically a single sideband signal with a reference carrier inserted so that one can lock up on to the sideband signal and set the AGC appropriately.

Yeah, but the cheapest radar detectors, those that merely detect
radiation in TRF fashion, can't be detected. They're hunting for the
radar detector LO. And the game plays on...

Small world you live in....

"Antennae" as used in the engineering and electronics world:

http://www.wallen-antennae.co.uk/ A manufacturer labels itself with the
'not used' term...

http://www.cs.usyd.edu.au/~jimd/ an illiterate Aussie ham, apparently.

http://imagers.gsfc.nasa.gov/ems/radio.html MY GOD! Those fools at NASA
haven't been updated, either!

http://www.the-saudi.net/communication/ant.htm Somebody forgot to tell
the Saudi Network about this..

http://home.wanadoo.nl/dms/meetings/mac_april_2000.html The Dutch Meteor
Society lapses into using a term not used....the buffoons!

http://image.gsfc.nasa.gov/rpi/ NASA does it again. When will this
madness end?

http://www.css.tayloru.edu/~physics/picosat/technical_specs/communications/s
um_from_pap.htm
Stupid college kids! Whaddathey know!

http://icarus.uom.ac.mu/mrt2.html

http://www.wcbn.org/history/wcbntime.html OK, this is just an FM
station...

http://spaceflight.nasa.gov/spacenews/reports/issreports/2002/iss02-03.html

But dagnabit if NASA still isn't using this term that's 'not used'.

>In the engineering and electronics world, the word "antennae" is not used.

rolls eyes

>I'm just trying to help a newbie.

PA-SitRep is a free, 100% non-commercial,
nonprofit, e-mail list and web site.

The PA-SitRep emergency traffic e-mail list is a
tool that will enable you to monitor and report on
major emergency situations throughout the State
of Pennsylvania including weather emergencies,
natural disasters, environmental disasters, civil
disturbances and threats of terrorism, major fires,
manhunts, and Amateur Radio Emergency Net
activations.

The PA-SitRep message posting protocol
caters to the users of text messaging capable
digital cell phones as well as users of regular
internet e-mail.

Message volume on PA-SitRep is EXTREMELY
low and users may subscribe and unsubscribe
at any time. Anyone willing to abide by the posting
protocol is welcome to join.

To learn more about the PA-SitRep E-Mail list,
please visit the following web page:
http://www.pa-sitrep.com/pasitrep.htm

Thanks. We'll look forward to your participation.

Not necessarily. The problem is not the connectors. The outer jacket of
the cable is not a hermetic seal. It breathes.

On a hot summer day, the coax warms up. Then a thunderstorm breaks out and
the temperature drops. As the air inside the coax contracts, it sucks in
water vapor through the jacket. This WILL happen unless you have the cable
pressurized with nitrogen or some such.

Try making insertion loss measurements on new 9913, and measure again
after a few years.

Two Hamilton officers face disciplinary action after RIDE moved away from police dinner
Overheard on radio

Adrian Humphreys
National Post

The Hamilton chief of police has apologized after his officers scrapped drinking-and-driving spot checks near a police social function out of fear they might nab senior police personnel.

Two officers, whose chatter over police radios was overheard by a citizen who had been seriously injured by an impaired driver, will be disciplined for giving the impression police received special treatment from their fellow officers, Chief Ken Robertson said yesterday after conducting an internal probe.

On the evening of a large banquet in November, given to honour retiring police officers and attended by Chief Robertson and other senior officers, two constables questioned the wisdom of setting up a spot check close to the Canadian Warplane Heritage Museum, where the dinner was held.

"I just thought of something funny ... the Retirement Dinner is tonight at the Warplane Heritage Museum.... Ha, ha, ha, ha," one constable said to another.

The officers were planning to set up a roadblock where drivers are stopped and checked for signs of intoxication. The program is called Reduce Impaired Driving Everywhere (RIDE) in Ontario, CheckStop in Western Canada, Counter Attack in British Columbia and Pas-Alcool in Quebec.

A second officer then replied: "I don't like the idea of doing RIDE lanes if the chief and the retired people are partying out this way. We should go somewhere else. What do you think?"

The first officer then suggested an alternate location.

After a two-month internal probe, Chief Robertson said that was inappropriate. "The community has to believe that, when it comes to things like RIDE lanes, police will not be given preferential treatment," he said.

"The officers are going to be held accountable. We've not been as professional as we should. I'm taking it hard on this one. You know how how proud I am in this service and this really hurts."

Matt Burke, 22, complained about the officers after hearing it over his radio scanner. He is sensitive to the issue after he was hit by a drunk driver in 1997.

"I was hurt pretty bad, broke both my legs and had a collapsed lung and a bunch of stuff. I've tons of metal in my legs and scars," Mr. Burke said.

He is satisfied with the chief's report and accepts the apology.

"He seemed heartfelt when he said it; he seemed sincere," Mr. Burke said.

"I don't want to see these two officers fired or anything but I think it was inappropriate. The way it came over the scanner and what I heard, it didn't sit right with me."

He is particularly bothered by the "Ha ha ha ha," quip of the officer.

The fate of the constables -- one a veteran with close to 25 years' service and the other with about five years' experience -- is up to the force's Discipline Review Committee. Punishment for officers can range from a discussion with a supervisor to demotion or dismissal under the Police Services Act.

"These are outstanding officers that, up until this incident, have been strong producers committed to public safety and highway enforcement. The fact that they are outstanding officers certainly is in their favour," Chief Robertson said.

David Mitchell, a city councillor, remains concerned over how long it took the force to complete the investigation. "Why has it taken this long to come up with an answer? Because it has gone so long, the perception out there to the public is not a very positive one," Mr. Mitchell said.

Oh, true. but it also seems to me we're dealing with a completely
different Cost/benefit matrix when we deal with such a system; the
number of users, unles congestion is an issue, never really enters the
equations. A completely weird CBA, I suppose, where the number of
actual users never really enters the discussion.

> For a normal site, the cost of the
> stations is low in comparison to the cost of the subscribers. For the

True. And yet the cost per dollar made goes up rather heavily.
Consdier the extra heavy designs involved with RR radios over the
years, and the extra heavy operational costs resulting from it.

> >Now, in all of this, I've been considering the east, and it's type of

> everywhere, so the radio system design has to be suitable for anywhere
> on the continent.

Easier these days then previously; dual mode systems are easier to get into; look at the number of multi-band two-ways out there on the HAM market; the costs on these have been dropping. I can't imagine that in volume, something capable of both bands wouldn't be workable. It's all PLL on LSI anyhow, except for the final amps.

> (* obviously in railroad yards the situation is reversed, but that makes
> up a fairly small percentage of RR mileage).

That's true, too. At the same time, consider that the yard will be at the heart of the congestion, since most yards are in cities. Perhaps another way of handling it would be placement of the 800 units into yard mules and units that don't tend to travel beyond the local area.

Sorry, I have no numbers for MDT's, I'm not sure you can scan them anyhow,
digital. Instead of radio, LE has direct access to Leads/NCIC for laptop
display, sort of bypasses dispatch and on the air info..

I'll bite my touunge, here, to some degree. I can understand the
reaction but suggest you may be using a bit too wide a bruch, here.

>And, of course, they hung on every word that came
> from their requisite scanners hanging on their sides
> as if to copy those of us who had to carry the things with us.

Not really. In my experience it's simply to keep track of what's going
on. It's easier to phtograph somehting if you know where it is... and
also niceto know f it's worth snapping before it gets there so as to
get yourself set up properly.

> Nah Ya oughta try crossing thru a cut of cars with one of those old Motorola >"lunchbox"
radios we had in the '70s with the handset on top--along with
> lantern and switchlist.

Yeah. I can imagine. I used a few of those in my broadcast days in
downlink service. Bateries weren't worth much, heavy as they were. I
recall using them covering a news event, back in '79, here in
Rochester, when a bank holdup went terribly wrong. (Security Trust on
Thurston, for those who know Rochester) Turned into a hostage
situation. Lasted several hours, and by the end, nobody had any power
in those things.

> I mean no harm and I am not a fan-

That much is clear, yes.

>the railroad provided me a good living and a decent pension and I never could >understand the often obsessive interest people have about trains.

So, what attracted you to that line of work?

> However, I do know that familiarity often breeds contempt, and being out on > the yard on the third trick while railfans came to watch the Amtrak train at >3 in the morning did nothing to increase one's admiration for railfans! LMAO!

well, I know a night worker who does just that; brings his lunch with him, and sits out watching the night traffic. Gives hima chance to get out of the office, each night.

And yes, while this is clearly a railfan fourum, here, our subject is almost off topic, because it more strictly involves the technicalities and logistics of radio in a specific environment, not so much trains themselves....and I suppose a discussion which could be followed and appriciated even by those who wouldn't know how to describe the difference between an E8 and a GP40, on a prayer. Such a design environment is not one people often run into; and the different cell dynamics, I thought made things somewhat ionteresting.

That said, I'm not just a tech, I'm also a railfan. I have found raifanning to be a way of spending some QT with my kids, who get a MAJOR kick out of it, and lean quite a bit from it. Yes, they learn. They consider it fun, but I manage to get it turned into a learning session.

Practical Math, and logic, for example:
(OK, son... the dragger says 418 axles on that coal drag. How many cars does it have? Well, let's see, here. It had two 6 axle units on the front, which leaves 412 axles. Let's see, 4 axles per car, makes it 103 cars.)

Weight measurements, (Assuming X lbs of coal per car, how much is he hauling altogether?) Etc.

I am using scancat gold 8.0 w/windows ME on a PRO-2052. I have the same problem. Files that I have saved disappear.

>2.bank tag's and fleet id's vanishing too.

This really stinks after plugging in all the talkgroup descriptions. Open up a file and there is nothing!

Also after using Scancat gold if I try to use WinscanRS it will not work until I do a
reset of the scanner and reload all my banks with WinscanRS. Needless to say after forking out $100.00 for scancat I am very disappointed. I have yet to contact
Tech help at scancat but will do this soon.

Jim

How long will it take for Hamilton to provide its police department
with encrypted voice radios to prevent further "gifts" of these sorts
of "impressions"?

Well i finally DID get the scanner to work with the help of the
scancat tech support, Jim, who is the tech support person is very
helpful he did work with me and we got it to work.. although i did
go through the scancat software AND the winscan780 software hoping
that at least one would work i had success..
I have to finnish reading the manual to tighten up on some loose
ends.. then it should be ok you might wanna save all the files to a
floppy so this way you know the floppy has the data on it..On 17 Jan

It's things like this that I would like to see go all the ways to the Supreme Court of Canada and set a precedent for scanner owners. Really, who is in the fault here in this situation.

The corrupt police force who didn't want to harm there own people, which in case would in fact harm everyone else, had one there own got into an accident an killed someone after driving drunk. Or the guy listening to the scanner who told the cops what he had heard on it. Which is illegal to do....

REALLY FOLKS, WHO IS IN THE FAULT HERE. THINK ABOUT IT. Most of the scanner listeners out there are people that would probably love to help out there communities with the use of there scanners, by doing things like this.

Kyle Foster On or around November 1999, Cobourg Deputy police chief Kyle Foster, 50, pleaded not guilty to the charge of driving with a blood-alcohol level above the legal limit. He was arrested in November 1999 when he was pulled over by provincial police officer Const. Chris Watkins during a RIDE program. Watkins, 25, told court he was conducting a RIDE program by himself when he arrested Foster, a 25-year veteran of the Cobourg force. Foster was on his way home from a police board meeting and said he stopped at a bar and had three drinks, Watkins testified. Foster's passenger was Cobourg's police Chief John Kaye, who had also been drinking.

1000. Re: RAIL: American Assoc. of Railroads/Norfolk Southern UHF system FCC licenses?

Newsgroup: rec.radio.scanner
Date: 2002-01-18 01:00:49 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <qtK18.2627$Ee7.146882@e3500-atl1.usenetserver.com>
Source record: 53768
Cross-posted to: rec.radio.scanner,misc.transport.rail.americas

I'll start with what "attracted" me to the rail industry. It had nothing to do with liking trains, or being a railfan. At the time I hired on, I had only a faintest curiosity about railroads. The biggest impetus was M-O-N-E-Y. I was pushing 30 years old, working in low-paying jobs that weren't going anywhere. I was also keenly conscious of the piteous nature of "socialistic insecurity" whose only real success is buying votes for the party that started it. I wanted more.
I sat back, evaluated my education and experience, and where I wanted to be in 5 years from that time. It was the best move for me. I was working in a job where the hours were extremely long, the pay was extremely low, and the bosses made promises they didn't keep. I was the good employee that they didn't appreciate until the day I walked out the door. Southern Rail-way was hiring laborers for their Roadway Shop in Charlotte, NC, and I jumped at it. I hung on thru a move of the track material yard to Birmingham, AL, went to the clerk training center in McDonough, GA, and marked up on the Clerk's Extra Board in '82. There is where I became somewhat less than enamoured with *some* of the fans. Of course, some of them were/are very respectful, remain out of the way, and politely ask questions; these I had no problem with. It was the "militant", rabid, and know-it-all ones whose "knowledge" came from those fan mags like "Trains", and felt themselves fully qualified to tell us, the REAL railroaders, how to do our jobs. We knew most of these guys by name, and went out of our way to avoid contact with them. Of course, if they knew what we REALLY thought of them, how we mocked them behind their backs, they would have been mad. These guys, as I said, think they know all there is to know about railroading, and mostly, they DON'T! They know just enough to get themselves killed out there.

There was one young kid, just out of high school, who had hung around the tracks since he

could toddle. He, too, was "et up" with railroads, and hired out after I did.
He was going to show everybody how to run a railroad, and he spent hours downstairs at
the training center telling the engineer instructor how to run a locomotive! I had only become
acquainted with the instructor because the Coke machine was downstairs right in front of his
office. One day, I went down there to get a Coke and crackers at break, and "Jesse" (not
the boy's real name) passed me on the stairs on his way back up. The instructor was standing
in his doorway lighting his pipe and remarked to me, "That boy'll be dangerous out on the rail-
road!" Jesse lasted about 60 days out of his 90 day probation. I was working extra (I marked
up before Jess did), at an outlying station (agent), and the kid was "cubbing" the job with me.
You'd thought he was training ME by the gist of the conversation. He simply wouldn't listen
to anything the old heads tried to tell him; he already "knew" it! I marked off on vacation (I
already had 3 years service when I went clerking) for 2 weeks, and when I came back, Jess
had been fired! He had a habit of disappearing from his assigned duties and going out to watch
a freight pass. One day he exhausted all patience, and after an intense search, they found him
up in the TOWER calming discussing the yardmaster's job. So they told him to either resign
or be removed from service.

One morning I was called to protect the agent's job at an outlying station, and I arrived before
anyone else (there was another job that went on just before lunch). I was busy clearing my
switcher to go to work when this older gentleman (about 45) waltzed into the office. I had
left the door unlocked so the switcher conductor could come in and get his orders and work list. I was just finishing up on the dispatcher's line, and I noticed the fellow sit down over at the
mid-shift clerk's desk just like he belonged there and begin to reach for the waybills.

"WHOA!!, I cried, "Whaddya think you're doing?"

He looked at me funny and said, "I'm gonna line up these bills."

I said, "Oh, no you're not! YOU get outta here! You aren't even supposed to be in here!"

" Well, So-n-so lets me do this when I want to"

(I was getting upset by then) "Mister, I can't help what somebody else
does; that information
is confidential customer data, and you aren't supposed to mess with it! Now
LEAVE before I
call the cops!"

These sorts of fans are the ones I am talking about.

Again, the industry provided me a good living and a good pension. I was
hurt in 2000 and received my disability pension which far exceeds anything I
could have expected in most other
endeavors. THAT's what brought me to the rail industry--not some kind of
"fascination" with
trains. I suppose I did some things that fans could only wish they could
experience, but it was
in the course of doing my job (like deadheading from an assignment on an E8
or F7--even grabbing a ride home on NW611. Now the only time I ever come
close to the RR is when I
cross the bridge over it. LOL!

The Cellular Telecommunications Industry Association is
one of Billy Tauzin's greatest campaign contributors.
Their concern is to give the cellular user the illusion of privacy.
Yup, we've got the best democracy that money can buy.

Perhaps someone will figure out the interface that Uniden's card uses and design an inexpensive interface for it so people can buy the card (to get the APCO-25 decoding) and then plug it in to an inexpesive interface that is attached to their current scanner's discriminator output...Then they don't need to buy a whole new scanner.

You're not the first one to get thrown for a loop by that :-)

>Consdier the extra heavy designs involved with RR radios over the
>years, and the extra heavy operational costs resulting from it.

Well, you know, that's not really a factor. The portables & the fixed equipment
aren't any different from what public safety types use, and the RR Spectra
mobile's only got a slight price difference from a normal mobile.

>> There's another issue: railroad equipment moves all across the country

>market;

Check Motorola's catalog. You won't find a single dual band radio in it, despite
years of pleading from the various Fed law enforcement types. It's a lot harder
to make a radio which meets public safety specs in multiple bands than it is to
make a low-spec ham radio (not meaning any offence to hams, here, it's just that
their requirements are different).

>> (* obviously in railroad yards the situation is reversed, but that makes

>another way of handling it would be placement of the 800 units into
>yard mules and units that don't tend to travel beyond the local area.

But why use 800 at all? Trunking is the solution, and trunking can work just as
well at VHF.

I use RG-6 and found that for my 50' run it works very well..About the same as a ~75' run of RG-213. And the best thing about RG-6...CHEAP! (compared to the others :)

Can't get those any more - some part of the gov't (OHSA?) decided that more than 5W of power was too much for a handheld radio - those things made 12 or 15W (or 20+ if "misadjusted"). Of course, that's also why they were hell on batteries.

Rich,

I have the exact same vehicle, I mounted my Uniden 780XLT in the extra trays in the center consol. You can carefully pry out the black top of the consol with a screwdriver between the base and the storage trays. It just snaps in. You will have to use a Dremel Tool to modify the plastic to fit your radio in this space. Dependent on depth you should have enough room to mount a radio. The top portion of the consol is replaceable from Ford parts (unknown price) or the junkyard. I also tapped into the accessory plug wiring inside the consol.

Hope that helps, as it's the only location in the vehicle for this type of option.

> but what's the complete set?

Take the scanner in question. Put it into "Service Search". Open the
squelch, then hit "Hold". You may want to turn the volume all the way
down, because the open squelch audio can be annoying. Now, step through
the frequencies using the "Hold" button, and you will see all of the
discrete frequencies used in "Service Search" by that particular
scanner. Do that for each of the different segments in "Service Search"
(Police, Fire, News...whatever).
Happy Hunting!
Jim

I would like to invite all of you to join my new Yahoo Scanner News Story Group.http://groups.yahoo.com/group/Scanner_News_Stories/

This group allows people from across the U.S. & Canada to post interesting news articles from Radio, Print, or TV Media that represent some part of the Scanner Hobby.

You will see what I mean by the first posting that was made.

I think this can be a very interesting group with the amount of activity that goes on throught both Countries.

Sorry for cross posting through many of the groups, but with a group like this, I wanted to try and reach out to as many people as possible that are interested in the scanner hobby.

So please don't flame any of the groups for this posting. Thanks for your understanding.

Yes. But they'd have to be somewhere near the beam of the antenna.
Of the few hams I know who would be tinkering with such things, none
of them operate such things mobile nor would they have much reason to
point these things along a road, where a cop's radar detector-detector
might pick them up.

True. It does add a level of unique interest.

That's not the way it used to be. I have some older Morotorla Rail
gear, which I got in a warehouse deal many years ago. I forget the
model number the units in that case were VERY different than the
automtive mobiles of the day. I gather that a lot of it had to do
with the power supplies... 70 volt primaries, if I'm not mistaken.

> their requirements are different).

None taken. And yet the sensitivity/ transmit numbers I see on those
are quite good, even by today's single band standards. Perhaps the
issue, though is one of reliability, which by definition is harder to
maintain in a commercial or public saftey environment.

> well at VHF.

The whole reason for the move in the first place was to releive
congestion on the VHF bands, from an FCC perspective. From the RR
perspective, their channels would end up being monitored less. Which
if you take the comments from our retiree in this thread seriously,
that's an issue. (Shrug)

1024. FS: SMA-to-BNC custom fit antenna adapters

Newsgroup: rec.radio.scanner
Date: 2002-01-18 14:03:13 UTC
From: gulyas@earthlink.net
Message-ID: <12235960.0201180603.593eddcb@posting.google.com>
Source record: 53794
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.scanner

If you have a need for a high-quality SMA-to-BNC antenna adapter that is
custom made to fit and protect your H.T. or scanner radio, I have the part.

Adapter allows you to:
Quickly change antennas to base,mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna
changes.

Adapter features:
Gold plated contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed
for moisture and dirt protection.
The base also provides an excellent support for any length of antenna
or application.
No need to remove adapter once installed to make a quick and safe
antenna change.

Sizes to fit radio models:
Yaesu: VX-5, VX-1, FT-50-R, VX-10, VX-150, VX-110, VXA-100, VXA-120
Icom: IC-T8A, IC-T81A, IC-Q7A, IC-R2
Kenwood: TH-D7, TH-G71, TH-F6A
Alinco: DJ-V5
Standard: C508A, C510A
Radio Shack: HTX-200, HTX-400, HTX-245
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine, and the Nov. 2000
Issue of QST Magazine.

$11.95 + $1.50 S+H(One to unlimited)
(Check or money order only in U.S.Funds)
(Specify-radio-model)

I know that. Nobody was more relieved than we clerks when we got the little handhelds and
the chest packs so the radio was basically hands-free except for transmitting. Then they gave us belt clips and mikes we could clip to our collars.

LOL!

Point taken, but I don't think it is so much an issue of being monitored as it is the presence of
people on the ROW or RR property where they aren't supposed to be. It's not that RR people
hate "fans", it's just the fear that they will get hurt. (Or bad karma engendered by encounters
with aggressive fans)

Several years ago there was a segment on 20/20 about a young boy that went out onto a trestle
in spite of signs being posted about trespassing and the dangers it holds. He was out in the middle when a train came along, and he couldn't get in the clear. He was killed. The parents
sued the company, the negative slant that 20/20 took on the story (it was almost as if the train
jumped off the tracks and chased the boy down according to them), and the money it cost the
carrier pissed the company off mightily-along with the employees. Management became instantly hostile towards ANYBODY on the ROW not directly connected with the railroad,
and the railfans, towards whom they had previously been benevolent, were no longer welcome.
We as employees, were ordered to report ANY one we saw next to the tracks. If we saw someone walking along the tracks--as people have done for ages as a shortcut--we were to report them to the RR dicks. If somebody was parked taking photos on the ROW, he was to be asked to leave, or reported as well. It didn't make any difference.

Really, I don't think it is a matter of caring about people listening in (to us it would be quite boring), it was more the presence of people around the tracks that don't belong there--the
fact they may be carrying a scanner is immaterial.

Railroads have become, of necessity, extremely safety conscious. A combination of accidents,
federal scrutiny, costly injuries, and often undeserved bad publicity have caused this. So, if
a fan gets confronted by a RR detective and asked to leave, I don't think it's because of his scanner.

Best wishes,

Jerry

My advice is to save constantly and on a floppy. Sooner (I hope) or
later, you will come to the same conclusion I did. Scancat is a mess, I
had the old Dos version, and it worked fine, but I have tried 3 different
versions of it since, and they are all flawed/unstable in some way. I
have downloaded and purchased a few others that work great and are much
faster, simpler to use, and much more stable. Jim is a really nice guy,
he gave me a refund on the last one I bought (7.0), and I was sorry to
finally give up on it, I just wanted to run my radios, not mess with the
software over and over and over again..

Look through the ads in MT or POP COMM, and download the demos for the
different programs advertized. You won't regret it.

Good Luck,

BDK

1032. RS Pro 2004,5,6 mod?

I have yet to contact Jim at scancat with my issues with using scancat (they are many). I have heard that he has excellent tech support. I have given up on using the trunking module at this time. I am using scancat for unattended logging of frequency searches (Conventional) with marginal results. I use WinscanRS for control of my PRO-2052. It is pretty stable unless I try to run it after using the Scancat trunking module. WinscanRS will not run after using the trunking module of scancat and I have to reset the scanner and reload my banks using WinscanRS, it will then run. I will keep tinkering with it for now.

Jim

1034. Kuhn Electronics; Tune-a-verter; Regency "Bread Boxes" receivers

Newsgroup: rec.radio.scanner
Date: 2002-01-18 17:50:39 UTC
From: Otis Cribblecobblis <alaininvc@netscape.net>
Message-ID: <3C48606F.4A20D016@netscape.net>
Source record: 53724
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave

Hello All!

Anyone in Cincinnati? Any "old timers" in Cincinnati? I just recently found an old diary (1966); I made a notation on a VHF, tunable receiver that I had just purchased from Kuhn. It was made of 1/2" plywood. The antenna was a 30", base loaded coil telescoping antenna. The radio had a squelch knob, volume and center tuning knob. It covered 30-80 MHz and 100-175MHz. Anyone else ever have one?

In the early to mid 1970's a guy in Refugio, Texas mass produced a small, tunable convertor that you could hook into your car radio (by connecting the car antenna to the convertor antenna input) and tuning your car radio to AM 1600 KHz. It came in 30-50MHZ, 118-136MHZ and 148-172MHZ; you could also purchase a tunable squelch control that attached to the bottom of the convertor. I gave mine away when I moved 5 years ago. ARGH! Anyone ever have one of these, or all 3 like I did, or STILL have them?

Lastly, a friend of mine had several Regency "Bread Box" tunable VHF radios. They were about the size of a bread box! They came in 30-50 MHz, 118-136MHz and 149-172MHz. Anyone have or remember these!?

Would love to hear your stories and share memories of staying up late Friday nights and weekends just listening to the glow-in-the-dark radios...

I know that there are books in print that illustrate "old" shortwave rigs. Any books on "old" scanners/tuners?

Thanks for taking the time to remember that far back!

Alain

The 100 to 200 channel mod is the only one I've seen. IIRC, the 860 was introduced to replace the very-similar 855 especially BECAUSE the 855 was able to be too "easily modified" to receive cellular. So they glued and epoxied and otherwise tried to tie everything down in the 860, to make the FCC happy.

Somewhere in the microscopic print of the AOR manual, should be the baud-rate of the radio and command set. If you let the software try to operate faster, it may allow manual selection ok, and even start scanning, but cannot squelch detect because of the timing differences. You can also try adjusting the dwell, delay, timing etc, and as a last resort, use an offset (that's scancat's miserable way of dealing with poor control). I have only experience with RadioMax's demo, which I am still considering as a promary control program. In the end, be satisfied with any reasonable scan rate that has 90% capture of an active signal - we get what we pay for after all, and for the price of most scan control softwares, we're not getting much reliability.

> Uh, is Canada's law that much different from ours here?

Quite: we can receive whatever the heck we like, break whatever
encryption we want (barring for-sale signals), in effect setup private
signals intelligence agencies. We just can't talk about what we hear,
or use what we hear for advantage.

> The PD is a party to their own transmissions, so it would be legal here
> to discuss such with them.

I wouldn't want to test this legal theory without professional advice.
[The police, everywhere, are a *very* insular club, not taking well
to outsiders intruding into their spaces..]

The reason why the guy in Hamilton isn't being charged with violating
the Radio Communications Act [forget which sections, etc] for
divulging the contents of a communication (I believe even to a party
of said communications) is the nature of the evidence that would be
put before the court/jury:

"Yes, your honour, the evidence is clear that our cops are
ass-kissing psychophants who have been well toilet-trained
to protect their fellow officers from the usual sort of
persecution that they dole out to other citizen-drivers.

But that doesn't change the fact that the accused is still a
nosy eavesdropper, guilty of an offence under the RCA."

There are also sections of our so-called constitution which alledgedly
preclude State action that would "bring the administration of justice
into disrepute".

Basically, no jury would convict, even if the judge didn't dismiss the
case upon filing.

AMATEUR RADIO NEWSLINE(tm) REPORT #1275 - January 18 2002

Amateur Radio Newsline report number 1275 with a release date of
Friday, January 18th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A new ham antenna on the I-S-S and a new microwave record down-under are first on Amateur Radio Newsline report number 1275 coming your way right now!

(Billboard Cart Here)

**

HAM RADIO IN SPACE: NEW ANTENNAS INSTALLED ON THE ISS

An American astronaut and a Russian cosmonaut ventured into space on Monday January 14th to move a construction crane and install a new set of ham radio antennas on the International Space Station. Roy Neal, K6DUE, has the details.

--

THERE IT WAS, ON NASA TELEVISION, TWO WHITE SPACE SUITED CHARACTERS, DWARFED BY THE IMMENSITY OF THE INTERNATIONAL SPACE STATION. FOR THE 32ND TIME ASTRONAUTS AND COSMONAUTS WERE OUTSIDE THE HUGE SPACECRAFT TO ASSEMBLE HARDWARE.

THEIR PRIMARY OBJECTIVE WAS TO MOVE A BIG CARGO CRANE FROM ITS TEMPORARY BERTH ON THE UNITED STATES SIDE OF THE ORBITING OUTPOST TO A PERMANENT LOCATION OUTSIDE THE DOCKING COMPARTMENT OF THE RUSSIAN CONTROL MODULE.

THAT ACCOMPLISHED, THEY WENT ON TO UNFURL A HAM RADIO ANTENNA. ASTRONAUT CARL WALTZ, KC5TIE AND COSMONAUT YURI ONUFRIENKO, RK3DUO, DEPLOYED THE RIBBON OF TAPE THAT SOON WILL BE IN USE ON A HAM RADIO STATION IN THE SERVICE MODULE,. WHERE THE CREWS LIVE AND SLEEP. A SECOND STATION HAS BEEN IN SERVICE FOR SOME TIME INSIDE THE SO CALLED FUNCTIONAL CARGO BLOCK, ANOTHER SECTION OF THE I S S.

FRANK BAUER, KA3HDO, THE CHAIRMAN OF ARISS, THE GROUP THAT IS RESPONSIBLE FOR AMATEUR RADIO ON THE SPACE STATION, CONGRATULATED THE INTERNATIONAL TEAM OF LICENSED HAMS FOR THE SUCCESSFUL CONCLUSION TO MONTHS OF HARD WORK.

ON JANUARY 25th ONUFRIENKO IS SCHEDULED TO GO OUTSIDE AGAIN, WITH FLIGHT ENGINEER DAN BURSCH, KD5PNU, TO INSTALL 3 MORE HAM RADIO ANTENNAS OUTSIDE THE MODULE THEY CALL ZVEZDA, THE CREW COMPARTMENT THAT'S THE SIZE OF A PASSENGER BUS HERE ON EARTH.

HAM RADIO IS GROWING RAPIDLY IN SPACE, ALONG WITH THE INTERNATIONAL STATION ON WHICH IT'S INSTALLED.

FOR THE AMATEUR RADIO NEWSLINE, ROY NEAL, K6DUE

--

The Expedition 4 crew will remain on board the ISS until May. And according to Frank Bauer, KA3HDO, another important task is to bring the automatic packet system back on line. He says that ground technicians are working with the astronauts and cosmonaut on that project and that task will continue as crew time permits. (ARNewsline from information provided by ARISS, NASA.)

**

HAM RADIO RECORDS: 24 GHZ DOWN-UNDER

A new distance record is set on a band where even commercial interests are only now starting to tread. And its a group of Australian hams who have set it. Q-News Graham Kemp, VK4BB, has the details:

--

A new Queensland distance record on 24.048.1 GHz USB was established morning of Tuesday 08 January over a 72.8 Km path. Location 1 was at Wellington Point, with VK3ZQB and VK4ZHL portable. Location 2 was at Caloundra, with VK3XPD and VK5DK portable operating.

Signals strengths up to 5x5 after initial optimization with typical daytime QSB. The visiting team are continuing with local propagation experiments. The challenges of building and operating microwave amateur radio equipment are wonderfully rewarding in many ways!

From Q-News Australia, I’m Graham Kemp, VK4BB, for the Amateur Radio Newsline.

--

Further experimentation is expected to bring even more record setting contacts in this very microwave ham radio band. (Q-News)

**

RESTRUCTURING: BIG LICENSING SUCCESS IN THE UK

A new slow-code license recently introduced in the United Kingdom is also setting records. This in the area of people flocking to get it. Jeramy Boot, G4NJH, days that the new British Foundation License is on its way to becoming a major success:

--

The Radio Licensing Center reports that, as of the 7th of January, exactly 600 of the new M3 Foundation Licenses had been issued.

In the 'QSO Party' for Foundation Licensees that took place on the 1st of January it is estimated that about 100 M3 stations were active. Many joined the one-minute-past-midnight 80-meter net and many more were heard working DX during the subsequent days.

One person active on the 1st of January was Mike Marsden, M3BQH, who also holds the callsign G8BQH. Mike reports that he worked Alex, UR5EDU, in the Ukraine at

two seconds past midnight, using 10 watts on 40 meters. The report was 59+10dB. After a few hours' sleep M3BQH worked 66 stations on the first day, with only two short CQ calls.

"The pile-up queue was never ending, I even managed to work seven other M3s", Mike said.

Jeramy Boot, G4NJH

--

To put this in perspective. The UK has 57,814 hams so 600 is about 1%. Here in the United States we have close to 625,000 licensees. That’s the equivalent of getting 6250 hams signing up for a new license class here in the USA in only a few short days. (GB2RS)

**

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, including the W8GK repeater serving Charleston West Virginia.

RADIO REGULATIONS: FCC'S APPROVES DRAFT WRC PROPOSALS

The FCC’s Advisory Committee for the year 2003 World Radiocommunications Conference has approved its preliminary draft proposals. The document has been assigned as D-A-02-101 and deals mainly with satellite and terrestrial allocations in the UHF and microwave bands. Amateur Radio is only briefly mentioned in the area of 890 to 1350 MHz allocations.

The Advisory Committee itself was formed in January of 2001 to assist in the development of United States proposals for WRC 2003. DA-02-101 is based primarily on the committee report. Comments on it are due on it no later than January 28th.

The complete of 55 page text of DA-02-101 is on the FCC website at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-02-101A1.txt (FCC)

**

ENFORCEMENT: CLEAN UP THE INTERFERENCE - PLEASE

The FCC has written to an A-M radio station and an electric power provider to help resolve an unusual and long-standing interference situation. One affecting local amateurs in the Cincinnati and Mason Ohio areas. Amateur Radio Newsline’s Don Wilbanks, KC5MFA, brings us up to date:

--

The letter suggests that multiple sources may be involved in this interference case. Also that two that are possibilities are Cinergy Corporation and radio station WLW. Cinergy is the electric company to the affected area and WLW is a Clear Channel Communications owned power-house AM station serving the greater Cincinnati area from a transmitter in Mason.

WLW operates on 700 kHz with 50,000 Watts into a single element diamond shaped half-wave vertical tower. This is only one of two such towers left in the United States, the other belonging to WSM AM in Nashville Tennessee. Both were constructed in the early 1930's by the now defunct Blaw Knox Construction Corporation.

One of the amateurs affected is Bob Reiff, WA8ULW, of Mason. Reiff told the ARRL Letter that while the noise is most noticeable on 160 meters, it's showing up elsewhere. He says that some local hams suspect it is even causing problems even on a two meter repeater.

In its letters, the Commission says that it recognizes this to be an unusual case. It says that the source of the interference could turn out to be something else unexpected. But the Commission adds that it is turning to the radio station and electric utility company and asking for their help in finding the source of the noise plaguing the Mason ham community. It's also asking that both cooperate with the technical experts from the American Radio Relay League in solving the problem.

For the Amateur Radio Newsline, I'm Don Wilbanks, KC5MFA.

--

By the way, More information on this very interesting Blaw Knox diamond tower design and the ones installed at both WLW and WSM is available on-line. Simply take your browser to http://www.wsmonline.com/w_homepage/tower/index.html. Its very interesting reading. (FCC, ARRL, Amateur News Weekly)

**

ENFORCEMENT: UNLICENSED OPERATOR TOLD TO EXPLAIN

A former ham that the FCC says may have been on the air without a license has been asked by the agency to provide an explanation. The person posing the questions is FCC chief ham radio rules enforcer Riley Hollingsworth, K4ZDH. And in a recent Rain Enforcement log, Hollingsworth outlined the situation:

--
Hollingsworth: "We requested clarifying information from Brian Bailey, ex-KD5PXQ. His license was set aside by the Wireless Bureau on October 19th. We want to know his exact whereabouts on two specific days in September. Bailey has been in touch with us and is deciding weather to provide the information."
--

According to Hollingsworth, the information that the FCC wants from Bailey relates to allegations of unlicensed operations and malicious interference. (FCC, RAIN)

**

HELPING HAMS: HAMDIHAMS NEW E-MAIL ADDRESS

This note: The Courage HandiHam System has a new electronic mail address. You can now reach the group at handiham@courage.org. You may also contact its Director Pat Tice directly at wa0tda@arrl.net. (HandiHams)

**

CONVENTIONS: HAMVENTION SAYS BRING YOUR BUS AND LAVE THE PARKING SPOT TO US

Free parking at the HARA Arena for Hamvention? Well, kind of. Its free if you leave your car at home and charter a bus to bring in a pretty large group of people to the event. Amateur News Weekly's Phil Thomas, W8RMJ has the not so complex details:

--

For Amateurs who charter a bust to make the annual journey to Hamvention, the Dayton Hamvention Committee will reserve a parking place for your chartered bus for the entire three days of Hamvention. The reserved parking will be close to the HARA Arena Complex, allowing not only a place to secure your valued purchases, but also a place to rest those weary feet after walking many, many miles of Hamvention. Space is limited for the new charter bus parking area. Pre registration is required. Availability is on a first come, first served basis.

--

For more information on the new on-site charter bus parking offer or to reserve a space, please contact the Dayton Hamvention office. It's open normal business hours Eastern Standard Time at are code (937) 276-6930. You can also fax your request toll free at
1-800-491-4267. (Amateur News Weekly)

**

CONFERENCES: SE VHF SOCIETY IN APRIL

Greg Robinson KB4NVD says over the VHF Reflector that the Sixth Annual Southeastern VHF Society Conference will take place April 26th through the 27 Th. in Oak Ridge, Tennessee. The conference, hosted by the Southeastern VHF Society, promises to be an interesting and exciting event with presentations from accomplished VHF and up amateur radio enthusiasts from several parts of the country. Registration, program details, hotel and travel information can be found in cyberspace at www.svhfs.org. (SE VHF Society)

**

HAM RADIO EVENTS: KIDS DAY A BIG MID-WEST SUCCESS

The first Kids Day operating event for 2002 was a rousing success in many venues. But in one Mid-West city a bit of coverage on a local T-V station helped to make it even better. Again to Amateur News Weekly and reporter Jack Parker, W8ISH:

--

Kids Day at the Indianapolis Chapter of the American Red Cross got a boost when event coordinator Stece Wendt, KB9RDS, made an appearance on a local TV news program. During the two minute segment. Wendt told viewers that all kids and their parents were welcome to share in the Amateur Radio experience, including an introduction to Morse Code, VHF repeaters and HF:

--
Wendt: “And then we turn around tand take them over to the big radios -- the big base station radios where they can talk -- literally -- around the world.”
--

This is the second year the local Red Cross chapter has shown young people how to tune in the world.

Reporting from Indianapolis Indians for Amateur News Weekly, This is Jack Parker, W8ISH.

--

This is just one of many Kids Day success stories. We will have more in future Amateur Radio Newsline reports. (Amateur News Weekly)

ARNEWSLINE(tm) FINANCIAL UPDATE WITH N6TCQ

It’s time for a report on the financial situation here at Amateur Radio Newsline. With it is our Support Fund Administrator and Corporate Treasurer, Andy Jarema, N6TCQ:

--

It is January of 2002. A brand new year for ham radio. And the beginning of another year for us here at the Amateur Radio Newsline. And as we start off the new year, here are the current finances.

Looking in the new corporate checkbook, the balance shows us at about $700 give or take a few bucks. Not very much when you consider that it takes over a thousand dollars a month to produce these weekly 20 minute Q-S-T’s.

Obviously, Amateur Radio Newsline is going to need your help -- and -- need it quickly to keep it from going away and to keep the news of ham radio coming your way.

We have done all that is possible from our side to keep costs under control. But, some fixed expenses like the telephone and long distance calling are a must have. So are electronic mail and world wide web access. There is the cost of the routine maintenance on the tape machines and editing gear. And in a few months the Newsline sponsored Young Ham of the Year Award will be rolling our way. All of this adds up and some costs just keep going up. When you add it all up and average it out, it comes to that $1000 a month figure I just mentioned.

So now is the time when Amateur Radio Newsline has to ask to ask that you help to keep its newscasts coming your way. Your tax deductible contributions can be sent to the Newsline Support Fund, Post Office Box 660937, Arcadia California. The Zipcode is 91066.

Ill be back within the next few weeks with an update on how things are going. For now from the Amateur Radio Newsline support center, I’m Andy Jarema, N6-Tiny-California-Quake.

--

Don’t worry if you missed the address. It will be repeated in a few minutes at the end of this weeks newscast. (ARNewsline(tm) Support Fund)

**

ARNEWSLINE(tm): WE ARE GOING MP3

One other piece of news concerning Amateur Radio Newsline. As of March 1st, we will be dropping Real Audio and going exclusively MP3. Why the change? Well ever since we began posting a downloadable MP3 file at our own FTP site along side the Real Audio file, 9 out of 10 people have chosen the MP3. And with good reason. MP3 simply sounds a lot better than Real Audio to most of you. And by dropping the Real Audio, we can make the MP3 sound even better by encoding at a higher bit rate.

Right now, you can still compare the two formats if you like. Until February 22nd we will continue to post both Real Audio and MP3. Take the time to download both. And don’t worry. Most modern media players including Real Audio, Microsoft Media and Winamp play MP3 so the chances are that you are already equipped to cover of the digital format change. (ARNewsline(tm))

**

SCIENCE AND TECHNOLOGY: THE NOISE OF EARTH

According to Space Daily, researchers have known for three decades that the Earth is a potent radio transmitter, but they were never able to pinpoint where the noise was coming from. Recently, by using data from the four spacecraft of the European Space Agency's Cluster mission, NASA-funded scientists have precisely located the source of the radio noise along the magnetic field lines. The noise originates several thousand miles above bright regions in the Earth's
northern lights. (AMSAT, Space Daily)

**

INTERNATIONAL-CANADA: ARE AGREEMENT IN B.C.

Turning to international news, Radio Amateurs of Canada which sponsors that nation’s Amateur Radio Emergency Service has signed a Letter Of Understanding and the British Columbia Provincial Emergency Radio Communication Service. The letter represents the collaboration between Radio Amateurs of Canada’s British Columbia Section Manager Fred Orsetti VE7IO and Supervisor of Information and Communications Technology for the Provincial Emergency Program Andrew Bryan VE7KSN, to provide a cooperative plan to carry out emergency communication. The letter also further enhances the work of the Canadian ARES program and compliments the Memorandum of Understanding signed May of 1994 between Radio Amateurs of Canada and Red Cross. (RAC)

**

INTERNATIONAL - CANADA: VE1AWA RESIGNS AS MARITIME PROVENCES SM

Due to personal reason Roy MacIntosh, VE1AWA has stepped down from the position of Section Manager for the Maritimes. Tom Caithness, VE1GTC has been appointed acting Section Manager pending outcome of the upcoming election call. (RAC)

**

INTERNATIONAL - UK: AMSAT-UK COLLOQUIUM

The 17th AMSAT-UK Colloquium will be held at Surrey University in Guildford from the 26th to 28th of July this year. AMSAT-UK is now inviting speakers to submit papers about amateur radio space and associated activities for this event and for the Proceedings document. Offers of papers should be submitted as soon as possible and should be sent only to Richard Limebear, G3RWL. His e-mail goes to g3rwl@amsat.org. (AMSAT-UK)

**

HAM RADIO IN SPACE: WEBSITE UPDATE

AMSAT reports that IK8XLD has updated his website with information about satellite operations, EME, the ham radio operation on the International Space Station, ATV and homebrew equipment. You can visit Rocco’s website at www.qsl.net/ik8xld. (ANS)

**

DX

In DX, DJ4KW and DK9GG are active from Belize as V31YN and V31GW respectively until about the 2nd of February. Activity is on CW, RTTY and PSK 31. (GB2RS)

And KE1F will be active on 10 to 160 meters CW, SSB and perhaps RTTY as ZF2LM from Grand Cayman Island from the 14th to 30th of January. (GB2RS)

Also R1ANF began operations as CE9 slash R1ANF on the 29th of December from a Chilean base in the South Shetland Islands. He is active on 10 to 28 MHz with 100 watts to an R6000 vertical. For all three, QSL as directed on the air. (OPDX)

Last but by no means least, word that JX7DFA, is on a job assignment to Jan Mayen. He is operating as LA7DFA. QSL via his home call. He will reply when he returns home in the Spring. (Modern DX)

**

THAT FINAL ITEM: A CALL FOR ARDF HUNTERS FOR THE WORLD GAMES

And finally this week, 2002 may be the biggest year yet for fans of hidden transmitter hunts, especially the ones that are all on foot. Amateur Radio Newsline's Joe Moell K0OV helps coordinate happenings like these and has news of two major events.
--

Every two years, hams from around the world gather to see who is best at on-foot hidden transmitter hunting, also called foxtailing, radio-orienteering and ARDF. There are separate events on eighty meters and two meters, each with five transmitters scattered in a forest that can encompass 1000 acres or more.

Competitors are divided into five categories for males and four categories for females. Each country may have up to three persons per category on its team.

Back in Y2K, the championships were in China, with a dozen stateside hams among the competitors from 26 countries. This year, the excitement moves to Slovakia and takes place from September 2 through 7. Once again, ARDF Team USA will be there.

Would you like to be on that team? If so, contact me right away, because USA must submit its Letter of Intent to the Slovakian hosts by the end of January.

Of course you'll need lots of practice beforehand, and you can get plenty by attending USA's own national ARDF championships, which will be April 19-21 in Pine Mountain, Georgia, near Atlanta.

Find out about both championships -- Slovakia and Pine Mountain -- by visiting my Web site: www.homingin.com. Homingin is one word. Then apply for the Team USA roster at my e-mail address on that site, or by postal mail to my callbook address.

Maybe you'll bring home a medal this year. From southern California, where this year's local radio-orienteering training sessions will begin soon, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

In case you missed it, Joe's website is www.homingin.com. "homeingin" is one word. (K0OV, ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More

information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating season for the Dayton Hamvention Radio Amateur of the Year, Technical Achievement and Special Achievement Awards closes January 31st. Nominations should be sent to Post Office Box 964 Dayton Ohio 45401. They can also be filed using the e-form at the Hamvention website. Its at www.hamvention.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm _____ saying welcome to the year 2002, 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.amateur.misc

http://n6jpa.home.attbi.com/nworradio/

The web page has information on Scanners, Ham
& SWL. I have lots of links and Frequencies for NW Oregon
and modifications for older ham radios and scanners. No ads
on the majority of pages, but the modification pages do have ads.

For those interested in the IBM-3330 but might not have found
one, I have found another phone by TT systems that appears
to have the same computer connections.

IBM 900FADS

It's not 2.4GHz but I found that even the IBM-3330 uses 900MHz
from the headset to the base.

If the detector's picking up the LO, it's going to be getting it from
inadequately shielded internal parts, rather than the antenna.

Common sense dictates, though, Jerry, that there is a major difference
between that case, and a case involving a railfan, who are fairly well
off, in terms of understanding where not to go for the most part. One
similar case happened here in Rochester not too far back... two kids
got killed on a bridge along the West Shore Branch.

Now, I happen to know this area very well indeed, because I used to
work in the parking lot in back of the place. The bridge is fairly
shootable, but the lighting angles are poor... and then only if you
shoot from a second brige about a 1/4 mile east down the canal, and
then only in the morning. Because of the lay of the land, distance

shots down track are impossible. In fact, lack of visability down track was tabbed as one reason for the accident. Traffic is fairly light, there, around 8 trains a day, more or less... the mains are just a few miles away, handling around 60 or so trains a day, at last count. It should be clear there aren't any railfans going to be hanging around this bit of track. These kids were diving off the bridge; they coudnb't have cared less about the trains.

Two kids killed.

Guess who the local cops were concerned about, afterwards?

> Really, I don't think it is a matter of caring about people listening in (to
> us it would be quite boring), it was more the presence of people around the
> tracks that don't belong there--the
> fact they may be carrying a scanner is immaterial.

Actually, around here it's a help. Where I live is between two draggers... about 5 miles apart. If you hear one barking, it's a pertty good indication something's on the way.... (smile)

> Railroads have become, of necessity, extremely safety conscious. A
> combination of accidents,
> federal scrutiny, costly injuries, and often undeserved bad publicity have
> caused this.

Our litegious society, I think, as a prerequiste for the rest, frankly. Take the McDonald's coffee case; The cour ruling on that one should have been:

"OK, gang, Coffee is hot and it'll burn your ass if you're not careful. If you don't understand this, you've got a problem that a 16.s million dollar settlement isn't going to solve. Ruling for the plaintiff, award not to exceed the cost of the coffee."

By the samke token, if you're going to be around a track, be aware of what's going on, for pity's sake. And while I agree, some people are not aware and misbehave... that's not the case for the vast majority.

1048. Ham Radio University 2002 for Long Island

Ham Radio University 2002/ARRL New York City-Long Island Section Convention

North Babylon, New York - On Sunday, January 20, 2002 at 8AM, the doors of the Babylon Town Hall Annex on Phelps Lane will open for the third annual Ham Radio University. Ham Radio University 2002 is a day of education about Amateur Radio.

This year the forums have been expanded and new forums have been added. There will be twenty, one-hour presentations with special forums geared to the non-ham as well as the experienced ham radio operator. The focus will be "hands on" with many demonstrations.

Come join us at the Babylon Town Hall Annex, Phelps Lane, North Babylon, Long Island, and learn about everything from satellite communications, low power operating using radios as small as a tuna tin, how to put up an emergency antenna, the latest information on advanced digital communications, finding and fixing radio frequency interference problems to purchasing your first station equipment or handi-talkie and a special "Ask the Experts" forum. There will also be a Special Event Station W2V set up and operational on HF. There will live SSTV pictures uploaded to the NLI WWW during the event.

TALK-IN W2GSB/r 146.685 -600 110.9 PL

HRU 2002 is sponsored by the Great South Bay ARC and is a cooperative effort between over twenty clubs and organizations in the New York City- Long Island area. It is also the American Radio Relay League, New York City-Long Island Section Convention. Besides the forums, there will be tables set up with information about the different groups, ham radio classes, exam session schedules, public service and other activities.

Join us for a day of fun and education for the whole family!
Admission is open to all - donation is $2 per person.
(complimentary refreshments available)

For more information contact:
Phil Lewis N2MUN, Chairman, n2mun@arrl.net or call 631-226-0698
George Tranos N2GA, ARRL NLI Section Manager, n2ga@arrl.org or call 631-286-7562

I picked up the BC 560 scanner for my vehicle at a fair price. This unit will not hold the memory after programmed.

Does any one have an idea what I need to change so the scanner does retain it's memory? I thought it may have a lithium battery but I was wrong.

I don't have a print out of the board to do a search.

Any help would be appreciated.

>http://www.bartleby.com/68/18/418.html

>Art Harris

Well, that's a bit of a shift, isn't it? We've gone from "in the
engineering and electronics world' to the world of "Standard American
English".
Newsflash, Art - I posted links to the real engineering and
electronics world, places like NASA, where antennae is in common use. It's
also apparently very common in Europe.
If you want to make the argument that some Columbia U. english prof
is going to get persnickety about it if he uses the term, go ahead. That's
not the argument you made, though. You said "in the engineering and
electronics world, _we_ use antennas." I posted sufficient evidence to
demonstrate that statement is false, and you can post all the useage and
style references you want to, it won't change the fact that you're wrong.
"Antennae" absolutely IS used, quite commonly, in the engineering and
electronics world.

I did not buy (5) scanners to listen to the cops chase drug runners and
I most certainly would "NOT" put myself and (in my case) my grand
daughter (you mentioned picking up your kids from school) in harms way.
Actually, I presume this was a troll because who would in their right
mind would put themselves (and family) in harms way of a police pursuit
with their kids in the car just because what, they think it's cool? NFW.

1056. Any CE-232 experts out there???

Newsgroup: rec.radio.scanner
Date: 2002-01-19 05:09:45 UTC
From: sro@ix.netcom.com
Message-ID: <sro-1801022109450001@dialup-63.210.124.159.dial1.losangeles1.level3.net>
Source record: 53723

Hello,

I just picked up a pro-2006 with an OptoScan and a CE-232 interface (built externally). The scanner and OptoScan board works fine (with Probe) but I am having trouble with the CE-232 interface and I'm hoping someone might be able to give me some place to check in trouble shooting the problem.

Here is the setup:
I am using a portable Pavilian N5430 computer running Win ME.
ME:I run the CBOOTNEW program V1.3.
CBOOTNEW: A screen flashes too quickly for me to read what it says
CBOOTNEW: "Enter comm port number.
ME: I enter 1 <which IS the correct port number>
CBOOTNEW: "Turn on Scanner Interface Unit and press any key"
ME: I turn on scanner and press a key.

CBOOTNEW: "...Downloading Support Program to Scanner Interface Unit..."

CBOOTNEW: "Comm's established -(Press: F10 to continue -or- Q to Quit)-".
ME: I press a F10.
CBOOTNEW: a percent counter runs from 1-100
CBOOTNEW: "Enter comm port number.
ME: I enter 1
CBOOTNEW: A screen flashes too quickly for me to read what it says
CBOOTNEW: "Turn on Scanner/Interface Unit <if Unit is on - turn it off and back on>"
ME: I turn the scanner off and then back on. As soon as I turn the scanner back on the screen changes without any input from me to
CBOOTNEW: "Checking comm's - Press any key to abort"
ME: Now here is where I start to have trouble. I seem to hang in this screen. I wait a while and then hit a key to abort.
CBOOTNEW: "Unable to establish communication" then immediately I get the -BASIC SETUP screen where I enter the Comm Port 1 and the Personality file which is 2006V13.per
ME: I hit the esc key a few times until I get the CBOOTNEW: "Turn on Scanner/Interface Unit <if Unit is on - turn it off and back on>"
ME: I turn the scanner off and then back on. As soon as I turn the scanner back on the screen changes without any input from me to
CBOOTNEW: "Checking comm's - Press any key to abort"
ME: Again I seem to hang in this screen. I wait a while and then hit a key to abort.
CBOOTNEW: "Unable to establish communication"
CBOOTNEW: "Reading per file"
CBOOTNEW: "Download error - Press <ESC> to exit - Any other key to continue"
ME: I press a key to continue

CBOOTNEW: I am presented with the HB232 - SCANNER INTERFACE PROGRAM-
Version 1.3 screen.
ME: I press F4 which is the APRGM function.
ME: I enter select a file which came on the CE Disk
HB232: "Programming Scanner"
HB232: Division by zero in line 0 of module V12BIN at address 1584:45BB
Hit any key to return to system

Any ideas????
Any help would be GREATLY appreciated. Please email me at:
sro@ix.netcom.com
Thanks in advance!

I just got a Radio Shack Pro 2035 1000 channel Scanner.
It was left in a house that I bought by the previous owner.
Is this a good unit?

Thanks in advance.
Mario.

1059. I need help finding out what frequency this radio is broadcasting on...

Newsgroup: rec.radio.scanner

Is it right to expect a HF tranceiver to have as good or even better sensitivity than a dedicated SWL receiver?

I'm interested in starting with Amateur Radio after listening to HF for years and want to buy a new receiver/tranceiver. Is there a sensitivity comprimise to use a HF tranceiver instead of a dedicated HF receiver.

I think that sums up the situation...incredibly stupid court
decisions. Someone ignores the warning signs, trespasses, and
gets smucked by a train, and the stupid judges and juries blame
the railroad. Perhaps there should be IQ tests for judges and
people who sit on juries. Wasn't there a case, following which
someone said, "The jury couldn't even spell 'DNA', let alone
understand it."?

Most any ham transceiver will have equal or beter sensitivity than most
of the swl receivers. YOu need to look at things like selecitivity and
how well the noise blanker work. The newer (probably anything made in
the last 15 years) transceivers work very well for listining to the
short wave stations.

Its worth about $220 - $250 on eBay. I own two of them and the are excellent MilAir scanners. Great Public safety scanners as long as your system isn't trunk. The 2035 can not do trunk systems.

You made a very good find!

Sesitivity has never been a problem on SW freqs, but handling adjacent channel stuff is definitely the problem. In the unchannelized ham bands this is the name of the game so it is reasonable to suspect the two you mention would be pretty good at SWLing and probably so close to a dedicated unit at the same price as to require a remote location and Superman for an op to tell the difference.

Where they might be different is in filter bandwidth: it is not easy to tune a full-width AM signal with a tight SSB filter and tuning AM with a product detector is cute. I am not familiar enough with either in SWL mode to tell but I will bet some others have. They may have well made the provisions for SWLing.

Leave you with the standard three sites for those interested in Amateur Radio:

http://www.arrl.org
http://www.qrz.com for the sample exams.
http://ah0a.org for Morse Academy which is still required for privleges below 30 MHz

Enjoy

Sensistivity will not be a problem. What you need will be determined by what kind of SWLing you plan to do. If you're mainly interested in "utes" using ssb, any amateur transceiver will do a fine job.

For am reception, are you mainly interested in "DXing" (as in finding rare, low power regional stations), or listening to the major international broadcasters for news and music? Your answer will determine what type of I.F. filters you will need.

These days, I prefer to listen to the major broadcasters, and I'm most interested in getting the best audio quality. This dictates wide I.F. filters of AT LEAST 6 kHz at -6 dB, audio circuitry capable of low distortion and good frequency response, and a good external speaker. Check what optional I.F. filters are available for the radios you are considering.

The best sounding radios tend to be the old "hollow state" boat anchors. Modern "state-of-the-art" radios often have very restricted audio response. Make sure try out a radio before buying if good audio is a concern.

That sounds sort of unscientific. I doubt that a gradual increase of couple of dB of loss would be "immediately" noticeable. In fact, during the change of seasons, a couple of dB change in path loss would be expected due to foliage, etc. The fact that you've noticed NO difference indicates that it is indeed hard to determine a small, gradual increase in loss without proper instrumentation.

Try switching a 1 or 2 dB in-line attenuator in and out of your feedline and see what a small difference it makes. Now imagine how hard it would be to detect that change if it happened gradually over a year or more.

My point in all of this is that high-end, low loss cable has it's place in true weak signal work (ssb, moonbounce, etc.) when using top of the line receiving equipment with low noise figure. For the typical scanner used in FM mode, RG-6 or something similar makes sense for most applications.

If you're interested in fundamental receiver performance, a transceiver won't leave you wanting. Remember that these radios have been designed to handle the chaos in the amateur bands during a contest - perhaps the most demanding conditions possible.

What you probably won't gain will be good performance in the MW and LW broadcast bands, and perhaps high-fidelity AM reception. These requirements just aren't factored into the design of a receive section designed primarily for amateur radio operation. But the manufaturers are starting to realize that their transceivers are being used for all-around listening, too, so I wouldn't be surprised if we started seeing more SWL-freindly receive sections in future ham transceivers.

If you're interested in listening above the AM broadcast band, though, you'll lose nothing by going with a good transceiver. Considering the prices of a good transceiver vs a new top-shelf receiver, the transceiver is the way to go if you plan to get on the air, too. You don't need both. Also, you don't need to mortgage the kids to buy the latest and greatest transceiver. A good used rig built within the last 15 years or so should provide lots of fun on both ham radio, SWBC, and ute bands.

If you have the bucks for only one large purchase, go for the transceiver. I did quite a bit of enjoyable SW listening on my last good transceiver, a TS-440S. That radio had absolutely no accommodation for the SWL, yet it was a terrific radio for ham, SWBC, and ute listening.

>The best sounding radios tend to be the old "hollow state" boat anchors.

Art, try to get some "face time" with an R8B. The first time you hear that radio's rich audio from a weak SWBC broadcast will have you abandoning those glowing filaments forever. You'll have to find a better way to heat your shack in the wintertime :)

All,

Popped into the local 'Shack last night and the manager was playing with one of the new Pro 93 scanners - seemed one of our local firefighters had 'cloned' his into the store display model and the manager (and, eventually, me) had a good time listening in, poking buttons, etc. Then the manager informed me that the scanner was on sale for $169. Hmmm... Time to get a trunking scanner?

Anyway, I know the Pro 93 is fairly new, but does anyone out there own one who can give a his/her impressoins of the unit, particularly compared to the other RS trunking radios? Good points/bad points? Is this a good one to buy?

Thanks in advance!

Brian

sensitivity is not a problem today, selectivity can be though. i imagine many transceivers will be set up with 2.1 or 2.4 kHz filters for SSB. even with this you can listen to broadcasts but the fidelity will be cut a bit... i have done quite a bit of testing in this regard. the audio is not all that bad at about the level of ~2500 Hz.

you might want to look into the new (out in february) transceiver from ICOM... the 746 Pro which has 32-bit IF DSP... plus digital twin PBT, manual notch filter, digital noise reduction, 100 Watts output, digitally controllable AGC.

it will have 51 digital filters!... each with soft or hard filter edge shapes! the range is from 600-3600 Hz on SSB so using ECSS (listening to AM as if it were SSB) you should get good fidelity (equivalent of up to 7.2 kHz on AM). btw, sensitivity is excellent except for BCB.

both the units you picked look nice and unless you're real picky about audio fidelity i would go for the transceiver and use it as as a receiver also.

phil :)

Apparently they aren't that up with the times... Even the cheapest radar detectors these days are VG-2 (radar detector detector) undetectable. I know of no modern radar detector detector that can detect a VG-2 undetectable radar detector... Damn that's a lot of detecting! I think they need to come up with a little better strategy for busting the violating commercial carriers than that...

What a lot of people don't seem to know (or care) about this case is that McDonald's was serving their coffee at EXTREMELY high temperatures, 180 degreed Fahrenheit IIRC. That's obviously much hotter than the temperature you usually encounter in your home, for instance, and have reason to expect. It's also much hotter than the temperature at which other restaurants normally serve coffee. THOSE facts were the basis for the judgment against McDonald's.

McDonald's now serves its coffee at more normal temperatures.

I suppose it is simple to find a handful of incorrect uses of the word among the millions cataloged on Google.

As for "shifting" the argument, you were the one who said: "Sheesh, I really wish you spelling/grammar lamers would at least pick up a dictionary before you spout off. Either form of the plural is acceptable."

So, I just pulled a dictionary from my bookshelf. The "Webster's New World Dictionary of the American Language (College Edition)" says the following:

antenna n. 1. [pl. ANTENNAE, ANTENNAS], either of a pair of jointed sense organs on the head of an insect, crab, lobster,etc.; feeler. 2. pl. [ANTENNAS], in radio & television, a wire or set of wires used in sending and receiving the electromagnetic waves; aerial.

In addition, we have:

"Kenneth G. Wilson (1923�). The Columbia Guide to Standard American English. 1993.
antenna (n.) has two semantically differentiated plurals: �the feelers of insects and crustaceans� are either antennae or antennas. In radio and television applications, the plural is always antennas."

http://www.bartleby.com/68/18/418.html

I think that should settle it.

Yes, I believe the British sometimes use "antennae." But then, they still "earth" their equipment. The NASA items you included appeared to be "feel good" pieces written for kids by non-technical PR people.

I can tell you, as a member of the IEEE Antennas and Propagation Society, I have never seen the word "antennae" used in any IEEE publications. Nor have I seen it in any other antenna text book published in the US.

If you want this poor newbie to go around talking about "antennae" and having people laugh at him, I don't think you have his beat interests at heart.

NiMH cells do not display negative delta V when they reach
capacity, as NiCads do. NiCad only chargers key on this.

Chargers that charge both cells interpret the cells differently
and key on other properties of the cell. So, no, NiCad/NiMH chargers
are not just NiCad chargers with a new marketing label.

Becareful, NiMH cells can be quick charged, but they can't be left
in the charger indefinitely. NiMH cells should be charged at a rate
of 10% of their capacity, and trickle charged at a rate much lower
than that. Otherwise their life span is cut by more than 75%.

You can use a NiCad charger for NiMH cells, but you need to insure
that the charging rate is low enough.

Cross-posted to: chi.forsale,austin.forsale,dfw.forsale,rec.radio.scanner,alt.radio.scanner

I have a beautiful YAMAHA, six string acoustical guitar, model FG-351SB, I’m wanting to trade. I brought this up here to the Chicago area, with the intentions of trading someone, but have been unsuccessful in contacting that individual since I’ve been here, and am leaving on Sunday to return to Texas.

The guitar was given to me a few years back, when I had an interest in learning to play…unfortunately I never did, and it’s been sitting in a closet at home for the last several years. What I’ve got with it includes:

YAMAHA Six String Acoustical Guitar, Model FG-351SB
Guitar carrying case
JUSTINA Zen-On Quartz Electronic Guitar Tuner (battery operated)

What I’d consider trading for: Pro-2006 Scanner, Yaesu FT-50R ham radio, GPS unit that could attach to a PC, and provide driving instructions (turn here, etc), gun, a cool watch (Casio Color Wrist Camera would be really cool) or whatever else you might have that I might be interested in. I'm an electronics junkie, so email what you've got.

I’m visiting the Chicago area, until Sunday, so I could arrange to deliver or meet somewhere in the area, or could arrange to meet in Austin, or Dallas next week, once I’m back in Texas. Email what you’ve got, and I’ll get back to you immediately. I’d really prefer to trade it off, as I don’t really want to lug it with me back to the airport. Email preferred, as I'm on a REALLY slow dialup connection, and browsing the newsgroups for followups is going to take forever.

Thanks,
scannerguy@c4.com

I've used a ham transceiver for years as a main SW receiver, then later as a secondary SW receiver. It performs just as well as my dedicated receiver.

Pricewise, it would be worth it to pay around $1000 or more for a good ham transceiver, than pay that much and then another $1000 for a dedicated HF receiver. But, if you're really dedicated to HF listening like me, you'll get both.

Tom

The NiCd charger in the PRO-92, for instance, charges at a rate which is 10% of the NiCd capacity. This amounts to about 5% of the NiMH capacity, since the PRO-92 uses 650 maHr NiCds or 1200maHr NiMHs. I have used the NiMHs in the PRO-92 for about 9 months now with no problem.

The recommended "slow charge" rate for NiMHs is also 10% of capacity.

Also, some older NiCd chargers use timers to control the total charge, so higher capacity NiMHs may not receive a full charge before the charger shuts off.

I have a Euro Model Yaesu VX-5R Triband Handheld w/ accessories for
sale,
This is a Export version with continuous (unblocked) coverage including
Cellular.
It is in mint condition with optional SU1 Module installed, and Free
Band modification for expanded RX /TX (and programmed w/ US Band Plan).
Comes with the following accessories:
(2) FNB58LI Batteries
(1) FBA23 "AA" Battery Pack
(1) CD15 Rapid Charger Base
(1) A/C Charger
(1) CSC73 Soft Case
(1) SU1 Altimeter / Barometer Module installed
(1) Yaesu Triband HT Antenna

Box, and Manual.

Asking $420 or best offer for the package.
Any Questions ?
I can be reached at :
jbraun@localnet.com

Thanks,
James

The various radio related Yahoo Groups have made these newsgroups obsolete apparently.

Every time someone comes in and asks a question, they are referred to a search engone, Yahoo groups, or strong signals.

Time to close rec.radio.scanner and the others.

Then again, I may be wrong.

Dan

Hoping to end this little exchange, let me put my 2 cents worth in.

The ..ae form of the plural is uncommon in normal American usage. It is mostly found in the biological area.

In the engineering field it is uncommon to find the ..ae form of the plural. It is mainly used by writers not trained in the US. So, yes, you will find references to antennae in US literature, but it is far more common to find antennas. They both work, and both are understood by working engineers.

Sort of like the inch, mil, micron, nanometer debates. Interesting, but irrelevant. Engineers use what works for them.

Of course Im not %100 sure whats going into the "commando vaults",
but, from what they're saying, its being filled with an alluminium
powder, and not the slurry that was used in previous conflicts. A
fuel-air-explosive, I think, can be simplfied to the fact that it
needs oxygen to producing the oxidation required for the explosion to
occur. The slurry, as used in vietnam, had its own oxidizer, and
fuel, for the kaboom.. Filling the massive BLU-82 with aluminium
dust, deploying the dust before the 3-4 foot fuse hits the earth, and
then creating a small (relatively) explosion from the bombs ignitor,
creates an outward shock, which carries the dust further.. while
igniting it at the same time.

I think this works similiar to a grain-silo explosion... quite
devestating, using the simpliest of materials.

Aluminum dust, I would imagine, would be a little more effective than
grain particles/gases.

So, to wrap up my point, depending on what the BLU was filled with
would determine whether or not it was a true FAE.

I think the use in Afghanstan has been FAE.

Quite a blast for the buck, regardless...

I have a 93. I think it's great. I only hate the alpha tag problem, the way it overwrites the ones in bank 1 and 2 from 8 and 9 or whatever. But it doesn't really affect me, I use the first half for conventional, the last half for trunking, so I could care less. I figure the next version will fix that.

It picks up the 800MHz real well, much better than the 94. And after cracking it open and doing a mod to restore the headphone volume, it's works like a champ.

I'm glad I bought it.

Using one of them beam antennas, points at oakland, sanfran, ca, airports.
I'm about 45 miles east.

I tried that discone antenna, but Its not for me.

Get the local pd good, along with the airtraffic cntrls/pilots.

Using home depot:
Bonded Direct Burial Foam Super ColorDuct 6/U 100% Shielded U/V Low Loss
Coax 9549T

The only unit the RR's use that's different is the mobile that goes in the locomotive
(which, as you recall, has a 72V power input and some different ergonomics, and
is sized to fit the standard "cleancab" rack). I'm not sure what the current pricing
is, but it's only $400 or $500 more than the standard mobile.

Everything else - portables, base stations, even the mobiles in the hi-railers is
standard stuff (*).

But 800 is congested worse than VHF, now. You'd have no hope of getting an
800 channel near most of the big urban areas (probably couldn't even get a 700
channel, and that band isn't even open yet).

John

Correct. McDonalds brews their coffee in a pressure vessel, so they can brew it
at considerably higher temperatures than "boiling". Given that it starts a lot hotter,
it stays a lot hotter than your average cup of joe.

Nah - newsgroups will live forever. Yahoo Groups time may even be
coming to an end. We'll see what their "read the ad before the post"
thing does in the long run. Might drive uers away. Or it just might
be a symptom that Yahoo can't afford to run forums any more.

>Every time someone comes in and asks a question, they are referred to a
>search engone, Yahoo groups, or strong signals.

Ah - the old "use a search engine" thing. Instant rudeness. I've
never done that - just too cheap a shot. But that's different from
pointing to a specific place that has a whole bunch of info.

>Time to close rec.radio.scanner and the others.

Ever try to shut down a newsgroup?

>Then again, I may be wrong.

Impossible. This is usenet. The last bastion of free speech. Nobody
is wrong.

Just different degrees of being right. :-)

BTW, I don't have a 93, but I hang out on the 93 Yahoo group as an
extension of my owning a 92. 93 owners seem to be pretty happy. Good
sensitivity, ability to trunk by entering only the control channel,
text tags. Negatives are no PL tones, and text tags are usable only
on 256 of the 300 channels. Positive (for the time being) is the
dynamite sale price.

If I needed another scanner, I'd buy a 93.

And the reason the coffee was so hot was that McD was using a steam process to brew the beans, rather than hot water. By using steam at high temperatures they could get by with a much cheaper grade of beans. A point that only true coffee fanatics might have caught. Coffee is normally brewed with water at about 180-190, but the brewing process itself cools the coffee down so that by the time you get it in the cup it is more like 140-150. McD has since apparently gone to a water brewing process. Some coffee site or other had all the details.

The newer transceivers that are on the market will provide adequate performance. The biggest difference between them and a receiver is that the receiver usually has an extra conversion stage at a lower I.F. provide more system gain. For the SW bands, this doesn't make too much difference, but if you are using a passive loop on the MW/LW bands, that extra gain will help. Noise figure probably won't be any better that the transceivers, though, unless the receiver has a quiet preamplifier ahead of the 1st mixer. I need to qualify these statements, because companies like Ten-Tec are coming out with triple conversion designs such as the Jupiter transceiver. Also, the extra gain in receivers means that you don't have to turn up the volume as much on those ultra weak signals. You can't go wrong with either approach, but I like to have that extra gain!

Good point on the benefit of the extra gain at the lower freqs.

I wouldn't worry too much about noise figure at HF except maybe up at 10 meters. At VHF and up the noise generated in the receiver front end is almost always much greater than atmospheric noise; hence the concern for low noise figure. At HF, atmospheric noise is so high that noise figure (as long as it's not atrocious) isn't very critical to performance.

'Sheetrock Scandal' Hits Dallas Police
Cases Dropped, Officers Probed After Cocaine 'Evidence' Turns Out to Be Fake

By Paul Duggan
Washington Post Staff Writer
Friday, January 18, 2002; Page A12

DALLAS -- After Jose Luis Vega was charged with possessing hundreds of thousands of dollars worth of cocaine in August, several of his relatives sought help from lawyer Cynthia Barbare. They insisted that Vega, an auto mechanic, was an honest, hard-working family man who must have been framed.

It wasn't the first time one of Barbare's clients claimed to be innocent. In 11 years as a defense attorney, representing scores of drug defendants, "I hear that kind of thing a lot," she said.

But in Vega's case, she and the district attorney's office made a surprising discovery. Lab tests ordered by prosecutors at Barbare's request showed that the white substance allegedly seized from Vega by Dallas police was 25 kilograms of the chalk-like material used in Sheetrock and other brands of wallboard. Someone had ground it into powder and packaged it to resemble cocaine.

Was Vega a drug dealer scheming to sell fake cocaine as the real thing? Prosecutors might have suspected so, if not for another, even more surprising discovery -- that in at least 18 cases involving alleged major cocaine seizures by the Dallas police narcotics unit in the past year, the purported evidence was all, or nearly all, ground-up wallboard material.

The revelations have led officials to announce the dismissal of drug charges against dozens of men and have prompted an internal police investigation aided by the district attorney's office and the Drug Enforcement Administration.

Back in the late summer and fall, when other Dallas defense lawyers heard about Vega's case, they similarly demanded lab tests of the supposed cocaine that their clients were charged with possessing. And it turns out that in at least 18 cases involving alleged major cocaine seizures by the police narcotics unit in the past year, the purported evidence was all, or nearly all, ground-up wallboard material.

"We're going to get to the bottom of every issue associated with this," Police Chief Terrell Bolton said at a news conference Tuesday at which he also announced that two narcotics officers involved in all or most of the cases have been suspended while authorities investigate the origin of the fake cocaine.

On Wednesday, the district attorney's office -- which had announced the dismissal of charges against the 18 men in the wallboard cases -- said it had decided to throw out drug cases involving 21 additional suspects. Officials said the decision was related to the inquiry into the wallboard cases, but they would not elaborate.

"The Sheetrock scandal," as Barbare and her colleagues call it, has been the buzz of Dallas's legal community since authorities acknowledged the questionable cases two weeks ago. According to the Dallas Morning News, the original 18 cases involve nearly 700 pounds of wallboard material. In each case, after allegedly seizing the powder, officers wrote in arrest reports that field tests showed it was cocaine.

"How could these field tests have been positive for drugs when there were no drugs?" Barbare said in an interview. Like other lawyers, she accused officers in the narcotics unit of trumping up cases against the men, hoping they would agree to plea bargains before thorough lab tests were done.

And some of the men did. One of them was Jamie Siguenza, charged with possession of cocaine with intent to distribute; he pleaded guilty to a reduced charge and agreed to be deported to Mexico. In a recent court filing seeking to withdraw the plea, Siguenza's attorney alleged that the wallboard revelations are evidence of "a conspiracy" by Dallas police "to frame individuals by planting Sheetrock designed to look like cocaine on their property. Had these facts been known to [Siguenza], he would not have entered into a plea bargain."

All the men arrested were blue-collar Mexican immigrants who speak little or no English, defense attorneys said, and few if any had arrest records. Several, like Vega, were auto mechanics who supposedly kept large amounts of cocaine in old vehicles where they worked.

"What I think is what a lot of people are thinking -- that we have some dirty police officers in this city," said lawyer C. Tony Wright, who represents one of the men.

Defense attorneys said most or all of the 18 arrests were made by the same two narcotics officers, who reported that they were led to the suspects by a longtime informant.

On Tuesday, Bolton announced that the two officers, whom he declined to identify, had been suspended with pay. He said the DEA had agreed to assist the Dallas police public integrity unit in investigating the wallboard cases. Unlike the police internal affairs division, which investigates alleged violations of department rules, the public integrity unit deals strictly with suspected criminal misconduct by

officers.

Bolton and prosecutors also have ordered a change in the testing process for drugs.

Before the questionable cases, lab tests were not done until shortly before a suspect's trial. By basing criminal charges on field tests alone and delaying expensive lab tests, authorities were able to save money because defendants often agreed to plea deals long before their scheduled trials. Police will continue to do field tests, Bolton said, but a lab analysis will be conducted as soon as possible after each arrest.

He said the investigation also is focusing on the longtime informant involved in the questionable cases. Bolton said the unidentified informant has worked with narcotics officers in more than 70 investigations in the past two years, for which he was paid about $200,000.

The wallboard cases came to light after Vega, 35, was arrested Aug. 16. As he sat behind bars, unable to come up with $500,000 in bail, his family turned to Barbare for help.

The two narcotics officers alleged that they found 25 kilograms of white powder in an old vehicle at the auto repair garage where Vega worked. They said they were led to the vehicle by a reliable informant who told them Vega was a drug trafficker. They said a field test of the powder showed it was cocaine.

But after interviewing Vega in jail, Barbare said, she agreed with his relatives that the case against him seemed bogus. She said she asked for a lab analysis of the alleged cocaine and arranged for Vega to take a privately administered polygraph test, which he passed. After the test, she said, the polygraph examiner told her he knew another lawyer, C. Tony Wright, who was handling a remarkably similar case.

Wright's client, Jacinto Mejia, 40, had been arrested in May by the same two narcotics officers in Vega's case. In an interview, Wright said the officers reported that they were led to Mejia by a longtime informant and that they found five kilograms of cocaine in an old vehicle at the auto repair shop where Mejia worked as a mechanic. Mejia was jailed on $175,000 bail.

Wright and Barbare said when they compared notes, they were dumbfounded.

Like Barbare, Wright asked for expedited lab tests. "And I got on the telephone and I called every attorney I know," he said. "I grabbed people in the halls [of the courthouse]. I told them if they have any clients with these facts, they needed to get the stuff tested and not to take any plea bargains."

As in Vega's case, the lab analysis of the powder allegedly seized from Mejia showed it to be pulverized wallboard material and charges against him were dismissed. Mejia, who spent five months behind bars, and Vega, who was jailed for two months, were freed in October. Other defendants who were locked up on bail in the wallboard cases also have been released, defense attorneys said.

Depending on what the official investigation discovers, Barbare and Wright said, their clients and the others who were charged may have strong grounds for lawsuits.

"None of this passes the smell test," Wright said. "Before it's over, somebody's going to go down."

Has anyone else noticed a marked decrease in the signal from the NOAA WX transmitter in Riverhead (WXM80, 162.475 MHz) lately? They're supposed to be running 1000 Watts, and always came in full scale in the past. Now they're down in the noise.

BTW, they are planning to introduce new "voices" this year. They even have names (Donna, Craig, and Paul). You can listen and vote for your favorite.

See:

I have a BC-560XLT 16-channel scanner that's been
sitting in my closet for two or three years now.

When I took it out and fired it up it still works
great as expected except that the portion of the
keypad for priority, weather, lock-out, review,
scan & manual no longer work. The numerical
keys still work ok.

My question to the group is if anyone thinks this
is mechanical (the keypad itself) or electrical
(within the circuitry)?

Any helpful suggestions will be appreciated!

Thanks

Could be both. I had a Regency D310, that was in the closet for two years and I decided to bring it down from the shelf to see if it would work, so I could sell it to my neighbor. The radio performed as it should have, but the top row of keys would not work. I opened the radio up and found a cable that went from the keypad to the main circuit board. I could see that the connection was rather dirty and tarnished, so I cleaned it up and put the cable back in place and the keypad worked properly.

Your problem might be something very similar or more complex. You might want to reset the CPU and see if the problem clears itself up that way? Other than that, your going to have either send the radio in for repair or open it up, and see if you can diagnose the cause of the problem.

Are you sure about the Canadian model being un-neutered? If so, please
do cite a source for obtaining one...

I didn't think Yaesu was really going to make that many versions of
their product, and it seems like manufacturers just make a model for
North America, without breaking it down into a neutered version for the
USA, and non-neutered for Canada. That seems to be the case with
scanners as well as ham radios, so if you're sure I'm wrong, please list
some Canadian sources.

I'm already aware of a couple vendors in Canada that special-order
unblocked models and sell them at a premium.

If you are tuned to the center of the signal, a 6 KHz filter at -3db
would give audio response of less than 3 KHz at -3db, wouldn't it? So
with a spec of 6 KHz at -6db, the audio response would be somewhat worse
than 3 KHz?

Thats my next move, to get in there and eyeball it just to see what I
can see. (Tarnnish, corrosion, ect.)

As for re-setting the cpu I don't have a clue how to ?

And for the person (W.F.) who said 16 channels isn't worth working on
I guess it's the same as the old saying about the eye of the beholder.
One scanner I own is a RS PRO-2004 that has 300 channels available
and I bet that I keep less than a dozen of them filled. So. . . ?

Hello,
This was a problem that I came up against a number of years ago. I
live in Oklahoma and the winds and tornadoes come sweeping down the
plains each year and communications under all conditions is essential
and this is what I came up with. All of my importent gear can run off
of 12VDC. These include a Yesumunsen FRG-7 short wave reciever,
small black and white TV with am/fm radio, Uniden BC890XLT scanner,
RS Pro-2022 scanner, RS pro41 handheld scanner, MFJ 959B short wave
antenna tuner and preamp,one JPS NIR-10 digital audio signal
processor, Dick Smith freq. counter, challenger base CB radio
station. There are also other items like a clock ,cordless phone, tape
recorder, a 4channel 50 watt per channel power amp for my computer's
sound card and more.A 1kw power inverter can supply AC if needed.

The basic power comes from a 30 amp regulated power supply and is supplied to two copper 16 connector buss strips of the type found in large breaker boxes.The buss strips are located up under the desk that I have for my communications center. A 50 amp reverse current diode on a large heat sink privides isolation. A large automotive type battery located just outside is floated accross the buss. The voltage is rock stable so I have not added a voltmeter to the setup after 7 years of running. I have been thinking about adding an amp meter.
I hope that this helps,

Best,
Dick

I share the same dislike for wall warts that you do. With a collection of over 24 items that required 9, 12, & 24 vdc, & another dozen needing 115 vac, my choices were

a little more complicated.

I ended up with 2 APC Smart UPS units rated at 600 & 700 va. These take care of all line voltage correction, limited power outages, and brownouts. One is dedicated to powering 4 computer monitors, audio, test equipment, & other non-critical items.

The 700 va unit directly powers 4 computers, an adjustable Daiwa 14 amp supply (metered) for 12 vdc, and a R/S 12 vdc supply converted to deliver 24 vdc @ 2a.

The 12 vdc supply is left on 12 v all the time, and is fan cooled. It also feeds a 9vdc regulated supply for those 9v items.

Distribution is via R/S clip in speaker connectors, using the supplied DC cables, or leads clipped from the wall warts to plug into the DC equipment.

The UPS units are managed from one of the Win computers re testing, battery charge, and loading.

A bit cumbersome & involved, but it answers all my needs with plenty of reserve capacity for expansion.

Arthur

Just wondering if anyone could point me to a vendor who sells a console mounting kit for mobile radio equipment. Specifically, for a Ford Explorer.

Not the typical mounting kit to mount a rig to under the dash, but a box-like container that would be just to right of me.... i.e. the center console. I would figure that the mobile rigs would be mounted vertically in this configuration.

Anyone heard of such a thing? or know where plans to build/modify such a thing would be? or even a person's/vendor's name that may not have the item, but could me headed in the right direction?

tnx

The Canadian model VX5R has 800Mhz (cellular) blocked.
This is a European model which does not have the blocks that a US model does.
And Band Plan is easy to edit with software..
Listed accessories total aprx $200 alone.

I can't provide any definite answers but u should look for companies which cater to public safety (police, fire departments, and the like) they usually have these type of items one such company would be Galls www.galls.com but i don't believe they have anything for the explorer
i am also on a similar quest to find good mounting solutions for my explorer for now i have fabricated a rack out of lexan that spans the transmission hump and tucks under the front floor mats to keep it in place

if you would liek i can take some pictures of it for you
just drop me an email
also please keep me posted via email on what you find

1146. tk8500, new open source software for ICOM IC-R8500 rcvr

Newsgroup: rec.radio.scanner
Date: 2002-01-21 00:12:26 UTC
From: Bob_Parnass_AJ9S <parnass@megsinet.net>
Message-ID: <3c4b5ca1$0$1612$272ea4a1@news.execpc.com>
Source record: 53615
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,alt.radio.scanner

The ICOM IC-R8500 is a high quality 0.1 - 2000 MHz receiver.

I wrote tk8500, a new open source computer program which lets you:

(1) Control the IC-R8500 from your computer.

(2) Download/upload the radio's memory channels from/to a
csv (comma-separated values) file.

(3) Log active frequencies, intercept time, and relative signal
strength automatically while scanning.

Though I've all but abandoned Windows 98 in favor of free Linux,
I wrote tk8500 in a language (Tcl/Tk) which permits it run on either
operating system. It may even run on Macs, Solaris, and other
environments, but I've only tested it on Linux and Windows 98.

You can read about and download a beta test version of tk8500
from my home page:

http://members.core.com/~parnass

I don't warrant the software, but it won't cost you anything.

Pop the end of the console off (the end with the cup holders). Bolt the mounting bracket to the dash end of this piece. Pop it back on, and mount the radio in the bracket. I have mounted dual banders in two Explorers, and this makes a nice convenient location for the rig.

That's right. That's why I said AT LEAST 6 kHz. I'm not sure exactly what's
currently available in optional I.F. filters, but 6 kHz may be as wide as
you can get. Of course, you can tune off to the side a bit to improve audio
response. At one time, I had an I.F. strip that could be switched between 9
kHz and 15 kHz. of bandwidth. Now that's high fidelity AM!

Hi Brad --

I can't offere anything about console mounting kits. But, perhaps, the way I solved my Icom 2710 mounting problem would help: I bought the remoting kit for it, used the "indistrial strength" hook-n-loop adhesive-backed fasteners from Radio Trash to lount the control head to my dash directly under the conrols and mounted the radio under the passenger seat. In my case, my front passernger seat lacks electric controls. If it was fully adjustable with all the motors underneath, I would have otherwise mounted the radio under the rear seat. BTW: there are enough holes in the under-seat brackets that no drilling was necessary.

Hope that helps & 73 --

Speech Inversion is accomplished by mixing the speech spectrum (typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz constituting the speech inversion.

The AOR 7030 comes stock with:

2.2 KHz
5.5 KHz
7.0 KHz
10 KHz

The 10 KHz is meant for FM but any filter can be used for any mode and
the 7030 has two more positions for filters. The 7030 has pass band
tuning so filters can be used for best effect depending on conditions.

Another good radio for international broadcasts or domestic AM broadcast is the Drake R8, R8A, R8B. It comes stock with several filters and pass band tuning.

The AOR and Drake models have synchronous lock to reduce distortion caused by fading.

The highest fidelity I ever heard out of a radio was a crystal set connected to a high fidelity audio amplifier. No filters.

Yes i have.. i'm not sure where they broadcast from... i was told that
they broadcast from brookhaven nat lab.. but i'm not sure about
that... but the signal ain't what it usta be...!!! neither is 162.40
mhz.. and about the voices? it's till that same computer generated
voice....

Here in Astoria, Queens they are weaker, too. In fact, much of the time
162.475 from L.I. is not readable at all. I have received stations from
Mass. instead!
Regards,
Jim

No one is forced to be a cop. If you don't like the job, get a different job. I think it's great that people feel empowered to speak up when they feel they've been treatly badly by a cop. Cops aren't above the law. If there's no merit to a person's complaint you shouldn't have anything to worry about. Isn't that what cops say to the bad guys? "If you've done nothing wrong you have nothing to worry about."

> Another officer once had a complaint to settle a distrubance between two

conflict?
> sheeesh!

Cops are supposed to be biased. Protect the victims and arrest the criminals. If the complaint was sustained there must have been an obvious problem the cop was overlooking. If you've done nothing wrong then nothing should come from the complaint, right?

sheesh indeed.

> would give audio response of less than 3 KHz at -3db, wouldn't it?

you bring up a very important point that i found out while doing some audio bandwidth testing (yet another page on my future site). larger filters are necessary sometimes because of the filter skirts... to achieve your wanted fidelity.

phil :)

1165. Scanner law - I don't think so

Since my wife and I lost our baby last year, we have both been at a tremendous loss. We sometimes stare at the children at the mall Anyway, I happened upon the frequency of our neighbor's baby monitor 2 months ago, and my wife and I have cried ourselves to sleep several times listening to the little baby go coo coo coo.

I never repeated what the baby said becuase that would be illegal, but I did find myself underneath the neighbor's window late one night with my scanner. It seems that the neighbor lady heard someone in the backyard and called the police. I have since paid for the damage to the fence (this fact was never reported in the local news), and yes I did appologize to my neighbor if only through a letter I wrote from my cell.

What I need help with is that I am being charged with:
IC 35-44-3-12 Sec. 12. (a) A person who knowingly or intentionally:

(1) possesses a police radio;

(2) transmits over a frequency assigned for police emergency

(3) possesses or uses a police radio:

(A) while committing a crime;

I don't believe I committed a crime because i never disclosed what the baby said. Therefore I did not break the scanner law.

My wife is in tears, and my only concern is for her. What can i tell her?

That's pretty rich!

If this were true, your case would be thrown out... 1) You were not in possession of a police radio; 2) A scanner can not transmit; 3)(a) Again, it is NOT a police radio.

Oh, and you DID disclose what the baby said... To all of us here in the newsgroup... Way to go..

Anyway, back to monitoring the trash posts...
PH

P.S. You can tell her that your a terrible story teller, and really needs to find a different hobby to waist everyone's time...

I don't believe you for a second, let alone a minute,
but since you WERE trespassing, AND had the scanner, you're toast.

The truth is out there,

but it's not interesting enough for most people.

Arthur, I wish I had your enthusiasm. I just looked under the desk in my shack & found 4 X 6 socket extensions, 9 power supplies of various voltages, both AC & DC, what looks like 100 miles of assorted cables, and ALL this despite having 2 13.8 volt power supplies driving 2 X MFJ Deluxe DC Power Outlets!!!. How much do you think your airfare to Melbourne Australia would be? I NEED your help desperately before something terrible happens & a dead short destroys thousands of bucks worth of computers, radios, receivers, tuners & sundry other gizmos.
Maybe I'm too old for this hobby, as I near my 60th year. I think it must be a younger man's bag; someone like yourself who can whip up what sounds like a DC Dream. My hat goes off to you. Your blood's worth bottling!

I share the same dislike for wall warts that you do. With a collection of over 24 items that required 9, 12, & 24 vdc, & another dozen needing 115 vac, my choices were a little more complicated.
I ended up with 2 APC Smart UPS units rated at 600 & 700 va. These take care of all line voltage correction, limited power outages, and brownouts. One is dedicated to powering 4 computer monitors, audio, test equipment, & other non-critical items.
The 700 va unit directly powers 4 computers, an adjustable Daiwa 14 amp supply (metered) for 12 vdc, and a R/S 12 vdc supply converted to deliver 24 vdc @ 2a.
The 12 vdc supply is left on 12 v all the time, and is fan cooled. It also feeds a 9vdc regulated supply for those 9v items.
Distribution is via R/S clip in speaker connectors, using the supplied DC cables, or leads clipped from the wall warts to plug into the DC equipment.
The UPS units are managed from one of the Win computers re testing, battery charge, and loading.
A bit cumbersome & involved, but it answers all my needs with plenty of reserve capacity for expansion.

1174. SatCom antenna

Newsgroup: rec.radio.scanner
Date: 2002-01-21 08:53:20 UTC
From: Brandon <brandon@mail2.sandlot.com>
Message-ID: <4GQ28.28406$lg2.8462672@news1.elcjn1.sdca.home.com>
Source record: 53643

Here is my situation:

I live upstairs in an apartment and have access to the attic. Right now I am using a Scantenna which is made by Antennacraft as my antenna and it seems to work ok. I am able to hear the static bursts from the encrypted comms in the 262 MHz range, so I know I can hear some of the satellites, and I did catch two OM's in SS on 269.650 along with more green comms. It seems all the satellites are rather noisy (steam/hiss-weak signals), but I am assuming I can expect this since I don't have a real antenna for monitoring the birds.

My question is: would getting a discone antenna help improve my reception? Is there anybody else using a Scantenna for SatCom reception? How did it work for you? I read some posts on a mailing list and it sounds like people had pretty good results using discone antennas. Since I am not able to put something up outside, an antenna in the attic is pretty much my only option. Would this work well in the attic, or should I just forget it and move to a house on a 10,000 foot mountain (hehe I wish!) and install some military grade 261 MHz directional satcom antennas?! Are there any good freqs to use that have constant transmissions (like a beacon type of thing?) so I could see how my reception is. For info-I am located in southern California.

Thanks in advance.

Brandon

A 16 channel is worth worth working on if one can't afford a new scanner.

That why I ask the BC-560XLT question originally and no one seems to know the answer.

"Question" was: How do I retain the memory after power is removed. My 560 began losing it's memory last week when I turn off the key in my vehicle. Any ideas?

Yes, I have one. I was originally sceptical, but I was pleasantly
surprised. It actually works very well. And doubles up as a good
indoor TV antenna.

The only problem is that the battery does not last very long (although
I suspect that the bright red LED consumes most of the current). So I
have connected it to a 9V AC/DC adaptor. It's on all the time and I
don't have to worry about it.

I have the following for sale, as I am shutting down most of the shack:

I am in the Boston area and would prefer to do local transactions. However, will ship with the expectation that the buyer pays shipping charges. Should have original boxes for all except the R-1000:

Email with questions if interested, and I will send pics with details. Cash or cashiers checks only, all prices firm! If I wanted to haggle, I would go to eBay!!

Item Price Cosmetic Operational
---------- ------- ---------- ----------
Radio Shack PRO-2066 $110.00 Excellent YES (hardly used)

Icom IC-R7100 $750.00 Very Good YES (stock, no gaps)

Icom IC-R71A $400.00 Excellent YES PBT Model (enhanced filters) w/Service and performance Manual

Radio Shack HTX-202 $100.00 Excellent YES (hardly used, less than 1 hour of air time (transmit)

Kenwood R-1000 $175.00 Good YES No manual

Can anyone offer comments on confirmed usage (dispatch / operations / fireground/ channel identification / etc) for any of the following Oklahoma City Fire Frequencies:

453.15 - F1?
453.35 - F2?
453.60 - F3?
453.30 - F4?
453.45 - F5?
453.70 - F6?
154.445 - Airport?
153.89 - Mutual Aid?
155.055 - Dispatch?
453.625 - Emergency?
154.37 - County Fire?
453.7875 - Bethany Fire?
153.13 - Warr Acres Fire?
151.055 - Storm Alerts?
151.445 - Storm Alerts?

Tom, et. al.,

Sorry, I don't own an IC-R75 so I probably won't
be writing software for it because you really need
the receiver for testing the software.

After comparing the CI-V instructions for the
IC-R75 and IC-R8500, I see although there are many instructions
in common, there several differences, too.

The IC-R75 has only one memory bank vs. several
for the IC-R8500, for example.

I'm sure it would be a fun project, though,
and it looks like modifying tk8500 into a "tk75"
would be straightforward.

Perhaps an IC-R75 owner who can write software will
step forward. Studying the tk8500 script
code would give him a giant head start and that's one
of the reasons I released it as open source.

It would great if there were more radio software
available for Linux and MacOS X.

Thanks. Before writing tk8500 and tk545, I knew
Perl much better than Tcl.

Therefore, I considered using Perl/Tk instead of Tcl/Tk,
but decided to use Tcl/Tk for two main reasons:

1) Tcl/Tk is easier to install than Pearl/Tk and I thought
a non-programmer/non-SA would have trouble with Perl/Tk.

2) The Tk provided with Tcl looked like it was better
maintained than the Tk version provided with Perl,
though that could be a misperception.

No regrets so far. I'd like to learn Python/Tkinter,
which looks like a combination which could be used
to produce the same type of multi-platform, easy to install
radio software at Tcl/Tk.

Hi Ruff,

What exactly do you need help with? It sounds like you already have it well squared away!

I suggest you might start with your AC power distribution. A 5 switch 'Computer Power Centre' is cheap and can feed the 4x6 outlets. Get the outlets and all the AC wiring off the floor and laced to the bottom of the desktop with long wire ties not snugged up - left as loops. Fasten with cable clips screwed to desk bottom. That's the first part. This neatens up the mess and you can begin to see the floor.

Now, if you want to add a UPS, you just have one line to plug into it!

Your 13.8 power supplies & MFJ strips are great. (I imagine you have two of them to supply the requisite current. If this is the reason, consider replacing these with a larger single unit. If not, let me know why not.)

Leave the supplies on a shelf or desktop, & put the strips & all the 13.8 wiring under the desktop, but a bit separate from the AC, so you can see what goes where. Important to lace this up off the floor as well, and if you have a labelmaker, it's nice to label each lead as it is connected.

Not a bad idea to fuse each outbound line to the equipment. You can get inline fuse holders cheap from surplus electronics or automotive shops. Make sure the fuses in the 13v supplies are correct size - a short could cause a fire.

Now look at the wall warts that remain. What have you really got there that can't be done another way? Are any of these AC supplies - better keep them for the moment, unless you have a bunch that are the same. The DC warts can usually be disposed of, and you can get the power through step-down regulators. If any of the DC warts are 12v, clip off the lead abt 6" from the wart, so you can use it again if need be, & use the lead to connect to the MFJ strips. Make sure you check polarity of the centre pin carefully before connecting, though.

If you've done all the above, you have the bulk of the wiring no longer hanging loos or on the floor. What you do with the rest is variable, but if you have multiple receivers and/or antennas with or without switching, I suggest you lace & label these leads as well.

If you provide more details, I might be able to make suggestions. I have a big box of wall warts I retired using the above methods.

Finally, how important is cost - some of this stuff will cost $$$$$.

Love a trip to AU, but I think you can do this one without me. I'm 61.

Hello,
F2 and f3 are the main channels use here in OKC for fire dispatch.F1
is ocassionaly used if there are a lot units in opperations or they
are working with Mediflight. I have 30 hits on F4 in the last 30 days.
None on F4 or F6. 154.130 is used a lot for county mutual aid with
volunteer fire departments. 154.370 is Ok County Emergency Ops. Cntr.
and is active when needed. 151.455 is a HOT channel when the tornadoes
are skipping around. I have never loged any traffic on 153.890 or
155.050. The frequencies for Warr Acres and Bethany appear to be
correct, however because of all off tarffic here in OKC it is rare
that I have them activily scanned. Two great Freqs that you are
missing are 460.350, Ok. County Sherrif ,and 460.400 Ok County(eastern
net) dispatch for the small towns east of OKC that do not have
their own dispatchers. I hope that this helps.
Best,
Richard

Source record: 53557

I don't know what type of antenna the Scantenna is but if you are
wanting to get beter results on the sats then you need an antenna that
will have a beam path that is up and not out. The discone will not help
much if any. I don't have the URL handy but you should go to some of
the ham radio sites that deal with the sats and see what they are
using. One of the more common type is called an eggbeater. IT looks
like two loops over a crossed dipole. YOu will have to scale the
antenna to the frequency you want to use...

I work the ham sats some but I have a place big enough that I can use
beam antennas on a rotator. YOu may be able to fit a small beam in the
attic for the 260 mhz stuff but you still have to work out a way to
track the sat unless you want to shell out a bunch of money for the
Yeasu AZEL rotator and interface it to the computer.

I just did a quick search and see the antenna I think you are using.
YOu might get beter results if you mount it horizontal instead of
vertical. If you try this , put a couple of reflector elements under it
about 3/8 wavelength and cut them for a frequency slightly (about5%)
longer than the 260 mhz you want to receive.
This shoud give you an antenna patern that is more up instead of out to
the horizon.

I'm in the Smithtown area. NYC and CT come in fine. But I only hear
Riverhead with my good antenna and receiver (and noisy at that).

I suspect their Power Amp may have failed and they're just running a
low power exciter.

you could frig around with your ref. freq. crystal's trimmer and it might stretch this far but probably not before the VCO drops out and goes out of lock.
The following is an excerpt featured in www.mods.dk . I think D45 may be of interest to you. Try removing this and you possibly will be able to select 10kc steps in your target band.
>>>
After removing the two upper back screws and the top lid, locate the black cable just behind the front panel. Adjacent to the cable are four diodes locations: D42, D43, D44 and D45.

D42

is not present; installed, it adds the 68-88 MHz European mid band (which includes the US 76-82 MHz mid band), removing the US 30-54 MHz low band. Even if a switch were installed to allow the diode to be selected, additional components and realignment are necessary for that higher frequency coverage. Don't do it!

D43

is present, allowing the 800 MHz band to be received; the diode may be deleted so that the same microprocessor may be used in scanner models which don't have that 800 MHz capability. Don't touch it!

D44

is present, deleting the cellular mobile and base frequencies. If one lead is cut, total 806-960 frequency is restored, including 30 kHz steps in the cellular band. Keep in mind, however, that mobile telephone eavesdropping is prohibited by the Electronic Communications Privacy Act!

This modification may void your warranty; it is best to cut the lead carefully, gently separating the gap slightly so that it may be resoldered in case the radio needs warranty repair later.

D45

is not present; installed, it makes the cellular 30 kHz increments change to 12.5 kHz. A small SPST switch connected in series with one lead of a 1N914 or 1N4148 could allow selection of the 25 kHz step interval in those areas which utilise that channel spacing.

To do this, it is necessary to unsolder a shield under the circuit board which covers the solder pads for the diodes. Such a modification should only be attempted by someone familiar with electronic circuitry.

Excerpted from Monitoring Times, June 1990, page 89.

I scaled down an Eggbeater II antenna and use it with a pre amp at the antenna for mil satcon reception. If your roof is not too lossy the Eggbeater II should work great for you. Assembling one from scratch is not bad if you have some basic antenna/metal skills. Somewhere around here I have all the dimensions and several hundred feet of 93 ohm teflon coax that is used for the matching the antenna. Another antenna that may work well is a several turn helix. I know a 5 turn has plenty of gain for mil satcom reception and it's not too big. If you aim it at about 45deg up and to the south it will pick up the majority of the satellite arch without a rotor. There are several published articles on making one for the mil band and it would be easier than an Eggbeater. A pre amp in either case would be recommended.

I am probably going to buy a discone scanner antenna from either Radioshack
or Scanner Warehouse to mount somewhere outside my house.
I do not have a TV mast or antenna currently installed and I dont think
mounting on the chimney is a feasable idea because of the looooonnnnggg coax
run needed to get the feedline to where I want it.

Any Suggestions/Mounting Ideas?

Thanks

A police radio (as defined by his 2nd "charge") is a device capable of
receiving and transmitting on police frequencies... A Scanner can not do
this...

> And he was in the process of committing a crime.
>
He certainly was; had this been a real post... For this he should have been
charged, but not with what he listed as the charges...

I have my discone hanging from the basement ceiling joists! I hung it
there when we moved, and wanted to keep it out of harm's way.

One day, having nothing better to do, I connected it to a radio. To my
surprise, it worked. I can use it to receive from medium wave (500 kHz)
to 800 MHz. And, it works as well as many other, more normally
situated, antennas I have tried. I can receive MW, 7, 9, 11,12, 17 &
MHz shortwave, VHF lo and hi, UHF, and 800MHz.

And, as I said, comparison with other antennas in conventional
locations, using the PCR1000/TalkPCR Spectrum Analyzer program, show
equivalent received signal strengths.

It's not the inadequate shielding. It's the typically unbalanced LO.
Of course, you could balance the LO and lose another 15 dB of
radiation. You could also put a low noise amplifier head of the
system and get another 20 dB of isolation or so. It won't help.

Antenna gain comes cheap in the microwave world. The radar detector I
just described would probably cost you around $1000 minimum. Police
can counter it by merely building a bigger antenna. They'd still
detect you. Get over it. You ain't gonna win this one.

I would suggest that your legal problem is a minor and temporary inconvenience that will have to play itself out through the system. Even if found guilty, your sentence for THAT violation will likely be very mild.

I would be more concerned about why you found yourself under the neighbor's window. I'm no psychologist or psychiatrist, but I think you need to resolve within yourselves the unfortunate loss of your child. Otherwise you could find youself in much worse trouble for possibly doing something far worse than eavesdropping or trespassing.

Get yourselves some help. Fast.

Harry

I don't need the manual anymore, some piece of scum STOLE my Pro-37. $4 + $1 shipping.

1220. Super Mp3 Recorder: Record whatever you hear into Mp3 or wav files!

Newsgroup: rec.radio.scanner
Date: 2002-01-22 05:35:57 UTC
From: coldrg@hotmail.com
Message-ID: <504a4270.0201212135.724cb4cd@posting.google.com>
Source record: 53589

http://www.supermp3recorder.com

Super Mp3 Recorder makes a complete recording studio of your computer. With Super Mp3 Recorder you can record voice from microphone, webcasts from the Internet, music played by Winamp, Windows Media Player, Quick Time, Real Player, Flash, games, etc. Sound quality of the recordings remains excellent, or sounds even better for Super Mp3 Recorder reduces noise. Super Mp3 Recorder is able to automatically detect the recording formats your sound card supports and then set the application's parameters for the best possible performance. Your recordings are then saved as Mp3 or Wav files.

1221. **PRO-92**w/Alpha-numeric Display $175 !!!!

Newsgroup: rec.radio.scanner
Date: 2002-01-22 07:01:16 UTC
From: leadenwah@aol.com

Source record: 53590

Radio Shack's PRO-92, 500Channel, TrunkTracking Scanner which does multiple 800 & 900 Trunking Systems, Alpha-Numeric Talk Group Readout (you program the name, application, dept. etc. of every talkgroup or convetnional channel).

This is one excellent HandHeld scanner. It does, of course, to all the usual bands as well.

$175.oo SHIPPING INCLUDED !

1222. PRO-2006 w/OS-456

Newsgroup: rec.radio.scanner
Date: 2002-01-22 07:03:37 UTC
From: leadenwah@aol.com
Message-ID: <20020122020337.13158.00002481@mb-cs.aol.com>
Source record: 53591

Radio Shack PRO-2006, 400Ch Scanner, unblocked, with Opto Electronics OS-456 board installed and working great. All software, accessories and origianl boxes included for both. This scanner also covers the Military Aircraft bands which are of great current interest.

$350.oo SHIPPING INCLUDED !!!!!!

1223. Uniden MR-8100, For Sale, hard to find

Newsgroup: rec.radio.scanner
Date: 2002-01-22 07:07:25 UTC
From: leadenwah@aol.com
Message-ID: <20020122020725.13158.00002482@mb-cs.aol.com>
Source record: 53592

Uniden's MR-8100 Scanner originally made for Police use, programmed by software (included), unblocked for full 800MHz, does all other bands including Aircraft. It has STRONG audio, external speaker, and the Biggest Best Readoud of any scanner ever made. You can adjust the contrast of the readout to suit any angle of view, a big problem with other scanners.

These have become very rare as they were made for Police & Fire use.

$200.oo

1224. Re: Ideas For Mounting A Discone Needed

Newsgroup: rec.radio.scanner

Source record: 53595

****
I have used two Radio Shack discones for about 5 years, each located on
opposite ends of the house. One mounted on an extended length gable TV Mast
Mount and the other on a heavy duty chimney mount.
Each mount has a 10' (2 - 5' heavy duty masts) mast supporting the discones.

Do not be to concerned about long coax lengths. Use 75 ohm foam RG-6 coax
(as used in cable installations) with appropriate "F" connectors and
adapters. The cost is significantly lower than comparable 50 ohm cable. The
performance (i. e. - check out the loss in the coax charts) is equal to or
better than even with the slight VSWR mismatch which is not critical for
this application. The

You will be pleasantly surprised.

Regards,
Gary Poss - K5WWQ
Hutto, Texas

I don't have to at this point, since radar detectors are still OK in
private vehicles in TX. I do think it's amusing , though, that a
perfectly legal 24GHz rig in a car could cause false positives on
their fancy new toys.

Depending on what the actual LO frequency they're looking for is, hams
could easily - and unintentionally - overload these things several
miles away.

You will lose at least 3 dB (half of the signal) with a good splitter,
and more with a resistive type splitter.

That may not be as bad as it sounds. You can put a preamp in front of
the splitter to overcome the losses.

The bigger issue is isolation. You'd like to have about 30 dB of
isolation between the two output ports of the splitter. Otherwise,
local oscillator leakage from one scanner can cause "birdies" in the
other.

No doubt. However you'd better be traveling in at least a two car convoy with the units clearly in the windshield. I've heard of a couple guys who once ran 10 GHz gunnplexers in WBFM mode from car to car just for fun. Aside of the dopplered noises and reflections, it worked about as well as a pair of cheap kiddie walkie talkies.

If you were taking something like this on the road in Texas, I'd be prepared to show regulations and original copies of licenses on request. Cops don't like it when you screw with their equipment. I would hate to try explaining mobile ham radio on microwave to a cop who barely understands what a radio is.

As I posted earlier, radiation style, or tuned amplifier front ends do
not have an LO to find. These used to be more common than they are
today. Put a cheap LNA in front of these things and I'll bet they can
work surprisingly well.

A 10-foot chimney-mounted mast is nice because you don't have to guy it. How long of a cable run would you need? The losses would increase with frequency and could be a problem at 800 MHz. You COULD install an in-line preamp at the antenna. That would overcome the cable losses. (The voltage for the preamp is fed through the coax.)

Another option is to mount a 36-foot telescoping mast to the side of your house. Or a tripod on the roof.

In general, the increased signal strength you get from a higher antenna, more than offsets the losses from having a longer cable. I'm not a big fan of attic mounted antennas, but that is another option.

Use RG-6 cable, and weather proof the outdoor connector with "duct seal" or "coax seal," not tape. Tape the cable to the mast to keep it from flapping. Make a "drip loop" where the cable enters the house.

This is interesting, Walt. On HF, the signal-to-noise ratio you hear in your headphones usually depends more on atmospheric noise than receiver-generated noise. Since a mediocre antenna picks up less signal AND less atmospheric noise, you still get a good readable signal (although the "S" meter won't move as much). This assumes your receiver has enough overall gain to deal with a weaker signal.

When you say the discone performed as well as other antennas on HF, do you mean in terms of readability or signal strength? It's hard to imagine that a discone in the basement would capture as much 7 MHz signal as a 1/2 wave dipole at 40 feet.

Possibly; as you probably know, she was elderly, and may have had one or
more health problems (diabetes, for instance) that caused reduced blood flow
in the extremities. That might have prevented her from realizing how hot
the coffee was.

Or the mug it was served in might have insulated her hands sufficiently that
she didn't realize how hot it was.

Either way, I'd be surprised if McDonald's didn't raise this defense at
trial. Presumably it got shot down.

Actually to add to this DPS has had radar detector detector for quite some time. At least a year or so.

And to add to this further, Ontario has had the same for about 12 years.
Also, detectors illegal here. So what's new?

But how many hams are on 24GHz, let alone MOBILE? I could probably count them
on one hand.

I asked NOAA about their weak 162.475 MHz signal (via the Guestbook on their website). Today (1/22/02), I got following response in an e-mail:

"The Riverhead transmitter had problems and is now completely off the air. We hope it will be fixed today. It depends on what parts are needed, etc.

Thank you for your e-mail and listening to NWR!!"

So hopefully, things will improve.

Yes, their operation center is at BNL at Upton. But the transmitter is in Riverhead or Manorville.

No Walt this 560 doesn't have an internal battery. I checked for a 9v and lithium battery back up but none. The only thing it could have is a cap that retains memory. I'm just not sure what cap it is.

Any ideas?

At HF, I was referring to readability. The received atmospheric noise
levels and signals are 10 or more dB above the receiver noise level.

At VHF, UHF, and 800 MHz, I was referring to signal strength.

www.pro-92.com (include the hyphen) That's the handheld twin to the
2067. Lots of technical info, archived discussion and spg files.

There is also a pro92 (no hyphen) Yahoo group. A lot of the same
folks hang out both places.

blah blah blah. you wouldn't say that if you understood imaging. if you are hearing one side scrambled and the other side normal. I have had that on one of those types of 2.4 gig phones where one side tx or rx on 900 and the other on 2.4. but could be other things. could be a cell. could be a image from a very close transmitter. say a 900 Mhz cordless tx'ing close by and receiving a image on 800. still sounds like a image no matter what. a cell always has a high pitched tone squelch on it.

Hey Guys,

Want to join the scanner world and have been eavesdropping for a few days. With five kids my budget is a bit low. I live in rural Mississippi and only have local police, fire, sherrif's Dept, ambulance to listen in to and none of them use trunking systems. Would a BC120XLT be a fairly good low-end cost scanner to start with? Any suggestion would be welcomed.

Thanks

Gerald

The best way for the police to detect a radar detector is with the switch. A cop with a radar gun off sits somewhere and sees a speeding motorist. When the car gets close he flips his radar on and the driver slams on the brakes when he hears his detector go off. That way the cop knows he has a detector. This was the way that the Alberta cops did it before they removed their laws. Nothing fancy or hi Tec. Just the stupidity of the owner.
The same is true for finding the scanner owners. The cops just look at who comes to rubber neck and gawk every time something goes down. It doesn't take long them to figure out who has the radios.
Also scanner nuts love to open their big mouths as to what is going on, (just look at some of the posts in this NG). I fell into this category about 12 years ago. I was listening to the local RCMP and I heard them talking about a guy I knew, we will call him ED. Ed was being arrested for drugs and was to be detained. The next day I was talking with one of his bosses and I told him that Ed was arrested for drugs. The boss asked me how I knew? I told him that I heard this on my scanner. This got Ed fired. The boss even told Ed that I was the one that heard it on the scanner. I was pulled over a few days latter and my car was searched by the police. When I asked what they were looking for they said, "your scanner". I was told that if they found it I would loose it and I started to quote law to them about my legal rights. I seemed to miss the law about repeating what I had heard and confidentially but the officer refreshed my memory very quickly.
Having a scanner or police receiver for more then 20 years I can tell you that, "chasing police cars" and repeating what you hear are the two best ways to lose your toy and face possible obstruction charges not a scanner detector but your own stupidity.

Yea, a 120XLT wouldn't be a bad choice if the price is right...and IF
there's nobody you're interested in that's going to 800-band any time soon.
(Not everything on 800 is trunked).

Don't pay a whole lot over $100/$150 for it though. Uniden.com carries
refurbished 120s for just over $100, when they have em in stock.

What county/city do you live in? You can email me offlist if you like

The best way for the police to detect a radar detector is with the switch. A cop with a radar gun off sits somewhere and sees a speeding motorist. When the car gets close he flips his radar on and the driver slams on the brakes when he hears his detector go off. That way the cop knows he has a detector. This was the way that the Alberta cops did it before they removed their laws. Nothing fancy or hi Tec. Just the stupidity of the owner.
The same is true for finding the scanner owners. The cops just look at who comes to rubber neck and gawk every time something goes down. It doesn't take long them to figure out who has the radios.
Also scanner nuts love to open their big mouths as to what is going on, (just look at some of the posts in this NG). I fell into this category about 12 years ago. I was listening to the local RCMP and I heard them talking about a guy I knew, we will call him ED. Ed was being arrested for drugs and was to be detained. The next day I was talking with one of his bosses and I told him that Ed was arrested for drugs. The boss asked me how I knew? I told him that I heard this on my scanner. This got Ed fired. The boss even told Ed that I was the one that heard it on the scanner. I was pulled over a few days latter and my car was searched by the police. When I asked what they were looking for they said, "your scanner". I was told that if they found it I would loose it and I started to quote law to them about my legal rights. > transceiver....Eddie

Model# might not be a gauge. I've note'd as Motorola
and other OEMs prices have gone thru the roof, the aftermarket
comm shops will buy new stripped down radios or used lots
at auction, then outsource or retrofit them selves with
unit options. Like if you bought a base model 5.0L Ford
Mustang and put a couple grand in aftermarket performance
equipment in later. Came across a lot of twenty Motorola
HT's at a industrial liquidation sale in Dec. Got them back
to the shop an they all had full option pkg retro-installed
aftermarket. a nice suprise. The 'box-o-chocolates
rule' sometimes applies ?

As long as you don't have any trunked systems to follow, the BC120
should be a nice little scanner for you to start out with. I have
always been very happy with the Uniden scanners that I have owned.

My PRO2006 VHF/UHF receiver is getting pounded by 930Mhz Paging, causing interference even into the VHF range. This major annoyance occurs with no antenna connected to the receiver.

I plan on looking at improving the grounding for the rig - but could anyone relate their experience using something like the SuperShield spray http://www.lessemf.com/paint.html , to reduce interference from hi-powered UHF transmitters? I figure that it can only help, as the top and bottom of this receiver is only covered by plastic.

After I get this taken care of, I'll either need a low bandpass filter to allow <900Mhz thru, or a notch filter for ~930Mhz. If anyone has good ideas on this - pls let me know. No need for TX capability, just RX.

tnx

Bill, I agree with - I guess - everyone else here - the R2 is definately NOT a toy. What nobody has addressed, though, is *why* it's so cheap!

What Icom did with this tiny babe is make the few controls multi-functional - there is only ONE dial, for instance, that serves a LOT of different functions, depending on what "mode" you're in. It is also sensitive to how fast you turn it: in some modes, turning it faster actually makes the numbers go faster. I really like that!

It's a great little radio - excellent quality, sensitivity, etc.

>What frequencies are you using it for?

Mainly 400-480 MHz and 800-900 MHz. And sometimes FM radio
(not specified to work under 200 MHz, but it does).

>Is it very directional?

Yes, which is good because it has a good directional gain.
But you can still search for signals even if the antenna is not
exactly pointing at them. So, if I find a noisy signal, I just rotate
the antenna for the best reception.

One thing you have to be careful about, if you are going to use a
power adapter instead of the battery, use a quiet one. The first one I
tried (a switching type) was too noisy. Just a cheap *linear* adapter
is the best.

> viding or confirming position for commercial jet aircraft...

By international treaty, the US FAA provides air traffic control services over most of the Pacific; this is handled by Oakland and Honolulu air route traffic control centers (the US also controls part of the western Atlantic from New York center). Communications is via HF radio (ARINC operates the actual transmitter sites), and as there is no radar coverage over the ocean, surveillance is by voice position reports based on the aircraft's own navigation; that's what you're hearing. As the flight nears the coast and comes within VHF range, the oceanic controllers hand them off to domestic sectors for landing sequencing.

Here are the Pacific ATC frequencies (see http://www.microvoltradio.com/high_frequency.htm for details and more frequencies):

Central East Pacific One

3413 3452 5574 6673 8843 10057 13354

Central East Pacific Two

2869 5547 11282 13288

South Pacific

3467 5643 8867 13261 17904

North Pacific

2932 5628 5667 6655 8915 8951
10048 11330 13273 13339 17946 21925

Airline "company radio" frequencies used for internal "housekeeping" communications are:

3013 San Francisco
3494 New York
6640 San Francisco, New
York
8933 New York
11342 San Francisco, New York
13330 New York
13348 San Francisco
17925 San Francisco, New York
21964 San Francisco

Best of luck.

Mike

Hello. Im totally new to scanning and really want to get into the hobby. After looking from many alternatives, im stuck with two models: The UNIDEN BC-245XLT and the RADIO SHACK PRO-93.

Would you please help me with this questions:

1. Wich of those two models gives you more bands or frequencies to explore?

2. I live in Costa Rica, Central America. In my country there ISNT a guide book with frequencies listings as you have in the US and other countries, so I will have to search for myself all the frequencies that I could caught. Can you do this kind of EXPLORATION (that is, without not even a trace or data in no book) with these two models? Wich of the two models is better or allow for better and easy EXPLORATION when you dont have any kind of information and are ON YOUR OWN?

3. Wich of those two models give a better and louder sound?

4. Wich of those two models has better reception and sensitivity?

5. Wich of those two models are more user friendly and more intuitive?

6. Wich of those two models gives you more bang for the buck and is easier to use?

7. Is there a thing I can do with a model that I can do with the other once and viceversa?

I KNOW Im asking for to much, but I can afford the luxury of buying both, I just
want the model that will give me more fun and possibilities, both in conventional and trunking modes.

THANK YOU MUCH!

You might as well as cover the radio with tin foil. No paint is going to
shield your radio from front-end overload.

We have the same problem in our area. There was a broad spectrum noise which was tripping our repeater. I went on a hunt and located the area from which the noise was coming from and reported back to the HAM club my findings. The club then rounded up a gentleman with some detection equipment and he pinpointed a pager tower 12 miles from the repeater which was causing the interference.

After locating the precise cause, the HAM club president contacted the pager company and they in turn checked their equipment to find a bad filter. They now have one on order and are fixing the problem.

The burden lies with whoever is causing the interference on the HAM spectrum. They recognize this responsibility and are reacting. If you have a good idea where it's oming from it would benefit you to contact them and diplomatically discuss the matter and request reconcilitation of the issue.

Source record: 53453

I just bought a Pro 2067 which I am returning to RS tomorrow because there is no way to have the unit start scanning automatically
when it is powered on (what the hell were they thinking here? I've owned probably 10-15 different scanners and this is a first),
this is a feature I must have. I have a question about the BC780.
1) I know it starts scanning when turned on (so there's one problem solved), my other must have is the priority channel, I just got
rid of a Pro 2026 that would not retain the priority on setting, every time I turned it on I had to hit the priority button. Does
the 780 retain the priority setting when it's turned off, then on again?
Thanks for your time.

I am selling a AOR AR-8200 communications receiver.
It is in excellent condition (both electronically as well as in
appearance). I am the original owner of this radio, and the entire
package has very little use.
Included is all of the original packaging, manual, slow charger and
NiCad batteries for the radio price for the entire package is $350
plus shipping cost.

Have you tried bypassing the power line and any speaker lines with a
ceramic capacitor or two? Don't use ferrites because they often don't
have any rejection capability at that frequency.

That might be easier than trying to shield the case...

1293. About SENSITIVITY of Scanners

Newsgroup: rec.radio.scanner
Date: 2002-01-23 22:26:24 UTC
From: ottobonilla@contratacionprivada.com
Message-ID: <2d2bbca8.0201231426.7e8ec747@posting.google.com>
Source record: 53463

Hello. When I look for UNIDEN scanners sensitivity they say: e.g.

(at 12dB SINAD) : 29 TO 54 Mhz: 0.3 microvolts

When I look for the Radio Shack PRO-93 sensitivity their specs says:
e.g.

(at 20 dB S/N) : 25 TO 54 Mhz: 0.3 microvolts

Why the difference? Why one used SINAD at 12dB and the other 20 dB
S/N, what is the difference between SINAD and S/N?

Thank you very much.

P.S. Does someone knows the sensitivity rates of the Uniden bc-245xlt?

1294. Waters and Stanton "FBI -9" Watson Earpiece.

Newsgroup: rec.radio.scanner

Just wanted to share a great product that I found! I was looking for a 3.5 mm earpiece to wear with my Pro 90 scanner. I recently bought a FBI-9 Watson earpiece from a company called Waters and Stanton. (www.wsplc.com/products.html)

Their earpiece is great! Great audio! Comfortable. Has a coiled cord with a "relief" clip. The company is over-seas...but delivery was very, very prompt.

If in need...try this product.

Source record: 53466

The sinad method looks beter for advertising. For example a comercial FM manual gives both. SINAD .175, the 20 db method .25 uV
Another comercial receiver has this differance SINAD .35, the 20 db method .5 uV.

The SINAD is made by putting a signal into the receiver with a tone of 1000 hz. The 1000 hz tone is then nulled out so that you get a mesurment of the ammount of signal and distortion. The signal is then decreased to the sinad meter reads a value of 12 db. The 20 db method is just a carrier with no modulation and you start with no signal and set a audio voltmeter to a referance point on the noise. The carrier is raised tuil the noise voltage drops to 1/10 the voltage.

There is no direct conversion factor to get from teh sinad number to the 20 db number.

you are using the input of the frequency of the repeater. well usually. look for the output of the repeater. This isn't always the case. but 95% of the time it is.

I think you all misunderstand. I was in the neighbor lady's backyard at night because the baby monitor stopped broadcasting.. My wife and I were very concerned about the baby - especially after we lost our baby last year.

I was worried about the baby, and that's what I told police.
I was never near the bathroom window where the neighbor lady was taking a bath.
My wife can absoloutely verify that.
Besides, I wouldn't be able to hear the police radio if the bathwater was running nearby.

I just want to get this cleared up asap because it may affect our ability to adopt a thirteen year old girl we know.

Thanks

Greetings !
There's an "A" and a "B". Version. The "B" supposedly took care of some filtering and crosstalk however the "A" version is the one that has most of the mods. By the way... If the serial number is...
C008039 B
and you purchased it over the net.
It is stolen !!! If anyone comes across this radio be advised that the FBI is involved.

Take care and good luck !
Ed

You could find the antenna site that has the 930Mhz transmitter and contact the site manager. Tell him that one of the transimmters is causing harmonics and that he might need to install a circulator.

1312. Re: Both sides of conversation?

Newsgroup: rec.radio.scanner
Date: 2002-01-24 04:24:45 UTC
From: "Michael A. Nunes" <p@pcmike.net>
Message-ID: <hu2v4uc5e54snet8f0ndki3c6f0r7ouo5o@4ax.com>
Source record: 53480

Depends on the type of system your public safety agencies use. If
they are trunking, I don't think you can follow the conversation with
an R2. If its just straight VHF/UHF, then this shouldn't be a problem
in the first place. It's likely your county's public safety system
uses one of the various Trunked systems.

If this is the case (trunking taking place), you will always only hear
one side of the conversation unless your scanner/reciever is able to
decipher what is being transmitted over the data channel for the
particular agency. At this point in time, only Uniden and Radio Shack
make scanners capable of following trunked systems. Even then though,
they are limited to only following analog trunked systems, as there is
no digital trunk scanner available yet.

On Wed, 23 Jan 2002 22:48:29 +0000 a plead for help arrived from
paul@nospam.com, in which he/she requested:

>How do you get both sides of the conversation when listening to emergency

I have a Euro Model Yaesu VX-5R Triband Handheld w/ accessories for
sale,
This is a Export version with (unblocked) coverage including
Cellular.
It is in mint condition with optional SU1 Module installed, and Free
Band modification for expanded RX /TX (and programmed w/ US Band
Plan).
Comes with the following accessories:
(2) FNB58LI Batteries
(1) FBA23 "AA" Battery Pack
(1) CD15 Rapid Charger Base
(1) A/C Charger
(1) CSC73 Soft Case
(1) SU1 Altimeter / Barometer Module installed
(1) Yaesu Triband HT Antenna

Box, and Manual.

Asking $420 or best offer for the package.
Can answer questions or forward pictures upon request.
I can be reached at :
jbraun@localnet.com

Thanks,
James

>side of the conversation on a different frequency?
>
>What is a repeater?

If it isn't 800 Mhz (which could be a "trunking" sytem - a computer controlled and relatively complex system that switches channel use and access among many mobile units on an as-needed & per-conversation basis) - it works like this:

A cental location has a tall tower, with a receiver on (say) 159.550 Mhz. It controls a powerful transmitter on 155.550 Mhz. When a mobile or hand held radio transmitts on 159.550, it goes into the receiver and is sent back out on 155.550. All the mobile receivers are tuned to 155.550. So a little low powered handheld on the western edge of the coverage area can talk to a handheld radio on the eastern edge of the area.
If your scanner is on 159.550 you might hear a handheld within a mile or two, but you'd not hear on 20 miles away. If you tune to 155.550, you could hear both through the repeater.
Now, the allocations on VHF high band (150-170 Mhz) weren't designed with repeater operation in mind back in the 40's, so the input and output frequencies are not logically spaced. I've seen them as close as 285 Kc (.285 Mhz) apart (and it took some big, expensive filters to make that one work!).
You basically need a local frequency guide to tell what's up. You'll see the police department with a large number of mobiles licensed on the input and only one base station licensed on the output.
On UHF (450-470 Mhz) the input is 5 Mhz higher than the output. You can probably get a clearer explaination in any frequency guide - Radio Shack sells one with a good basic primer on communications systems.

Message-ID: <zYM38.691$7Y6.161012@news.uswest.net>
Source record: 53485

I remember once on a ride along with the Strathmore RCMP this one constable... She would pull up behind drivers in her ghost car and then when she could see their radar defectors she would flick her radar gun on and off real fast a few times, and we could see the lights on the guys dash go crazy. He would then slam on his brakes..She just did that for fun. She didn't hand out 1 ticket that night.

And when my brother was in the RCMP, they would pull people over who would slam on their brakes when they saw the cops, because in their opinion (the police) if a motorist was driving along and saw a cop, and slammed on their brakes, they must have been hiding something. I mean, why else would they slam on their brakes, aside to avoid being pulled over? And why would any law abiding citizen want to avoid being pulled over? I don't care if I'm stopped. I only care if I did break a law. If I was a cop and I saw some guy slam on the brakes when he saw me, I'd stop him too. Must be hiding something...

Source record: 53489

There are two frequency ranges I generally try to listen to,
140-150Mhz
450-460Mhz

I have frequencies for base and mobile which indicates that I hear the base
on one frequency and the mobile on another, do I have to flick between both
channels?

If the base is the other side of town I would never hear them so I guess
that this is what you meant by a repeater? Should I try and find that
frequency?

Thanks

Yes. It could be that your area doesn't use repeaters and if a mobile
unit is not nearby then you won't hear them. It would help if you told
us where the hell you live so we all wouldn't be wasting our time on a
guessing game.

>

Specs are pretty meaningless, individual radios vary quite a bit. I have
owned several of the same model scanner, and they were always different
in sensitivity. This could be minimized by alignment, but usually there
was at least one bad better on one than the other. Juat about all
scanners are sensitve enough, and some are too sensitive for their own
good, they get intermod when hooked up to almost any decent antenna, and
some have problems with just the rubber duck that comes with it.

Don't worry about specs, look at www.strongsignals.net and other sites
for reviews, and you can make a good choice..

Why do you people go out and buy the most expensive radios on the market,
only to not no how to properly use them or know how to scan in in general.

Before going out and wasting all your money on a radio that you will only
half use, save yourself some dollars and go out buy a cheap scanner first,
learn the aspects of scanning, then go out and waste your money on an
expensive radio.

That's just my 2 cents here.

Source record: 53404

The "best" mobile antenna would be one that's tuned specifically for the frequencies (or band) you most want to monitor. And wanting no holes requires either a mag-mount or something like a window clip-mount.

If most of your listening is in VHF-high, I'd recommend that you go to a commercial radio shop and get either a quarter-wave (about 18") or 5/8 wave (bottom-"coil" loaded - about 40"), with a magnetic mount. Most shops should have them available.

Having said THAT, a quarter-wave VHF antenna will be close to 5/8-wave on UHF (without the loading), so it should work OK on both bands... UHF is mostly repeatered anyway, so may not be a problem.

A 5/8 wave VHF antenna will theoretically pick up weaker signals better (higher gain), but in real life that's only significant in flat, open country. In mountainous (or even big-city "canyons") the quarter wave has a much higher angle of reflection, so it picks up more signals coming in from above you.

Thoroughly confused? As I've mentioned here before, for years I've used the R/Shack "Magnet-Mount Mobile Scanner Antenna" Cat.#: 20-032, which sells for about $30. Check out http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F001%5F002%5F007%5F000&product%5Fid=20%2D032

It has decent coverage on all bands. And in a pinch I've used it for satisfactory transmitting on 2-meter and 440 MHz ham bands as well as on, pardon the expression, CB.

1337. Is new RS PRO-93 no better than my old Regency HX1500 ??

Newsgroup: rec.radio.scanner
Date: 2002-01-24 19:45:25 UTC
From: nweiler@nac.net
Message-ID: <7225aa4b.0201241145.39022aee@posting.google.com>
Source record: 53406

Hi,

My first and only hand-held has been my Regency HX1500, purchased around 1986. At the time I believe it was considered to pretty good. About 6 years ago I tried out a top-of-the-line Radio Shack with more channels, more banks, etc. I compared the two regarding their ability to bring in faint signals and returned the RS because I thought my HX1500 was still the better performer.

Now, being even more hampered by just 4 banks, 55 channels, and slow scan rate, I'm giving the new PRO-93 a shot. I'm in a rural area ï¿½ trunking is not a big concern to me (railroading is) - but I do expect the PRO-93 to pull in anything my HX can.

So here's my test ï¿½ maybe not to scientific ï¿½ no lab testing devices, etc. - just me, the two scanners, one in each hand, held outside about 5 feet apart, with a railroad crew drilling local industries about 8 miles away. They are using the loco's radio and a portable. Both are set on manual to freq 160.485. For every 5 transmissions the HX1500 picks up, the PRO-93 picks up the 1 or 2 stongest. I move around, keeping the scanners at the same height, swap from one hand to the other ï¿½ everything I can do to make sure one doesn't have an edge over the other. Results don't change - the PRO-93 doesn't see everything the HX does.

The specs from each manual seem to give the edge to the newer PRO-93, so why does the PRO-93 not pull in like the HX ?? Did I just happen to pick a band that the PRO-93 is deficient in ??

Is there a hand-held out there with the features of the PRO-93, but with the performance of the old Regency, in the $200 area ?

Thanks,
Norm in NJ

The HX1500 was a very hot receiver but even in 1986 it was also known for intermod problems. Congestion and strong signals would blow it away. For your situation it would be hard to beat it with anything.

>Now, being even more hampered by just 4 banks, 55 channels, and slow
>scan rate, I'm giving the new PRO-93 a shot. I'm in a rural area –
>trunking is not a big concern to me (railroading is) - but I do expect
>the PRO-93 to pull in anything my HX can.
>

The design considerations are different now. Intermod has to be carefully controlled (from an urban performance viewpoint and to insure cell frequency images can't be picked up). These considerations result in a somewhat less sensitive but (for 80% of the customers) better working radio. Maybe a new cheapy that has no 800 Mhz at all might come closer, but it won't gain you many features, these tend to be plain jane.

>The specs from each manual seem to give the edge to the newer PRO-93,
>so why does the PRO-93 not pull in like the HX ?? Did I just happen
>to pick a band that the PRO-93 is deficient in ??

Probably not, there are just compromises that crop up in the whole equation of cost/performance considerations. Most scanners are sold to hear the cops and most places the cops are going trunking. So the features & performance get concentrated there. Real world testing might uncover something for you - as you can see, bench tests don't tell the whole story.

Thanks for the info, unfortunately I am a local public safety official (LT on the FD), very few people have scanners in their cars,
and the ones that do, I installed them using RS glass mount antennas. I have the same antenna but am getting very poor performance
from it, compared to others, maybe my antenna is just bad?

> interference even into the VHF range. This major annoyance occurs with no
> antenna connected to the receiver.

This is very strange. The PRO-2006 has a series of tuned/switched preselector filters in the front end to minimize "intermod."

A couple of possibilities:

1) You are VERY close to the pager. If this is so, your situation may be hopeless.

2) The pager is putting out "spurs." If this is the case, nothing you do on your end will help.

3) RF getting in through the case, or on the power/speaker leads. (This sounds like what you're assuming.)

Do you have any other scanners? Do they pick up the same "interference" on VHF?

Try terminating the antenna port with a 50 resistive load and see if that makes a difference. If so, the rf is coming in via the antenna port.

Try to find the location of the pager via the FCC database using frequency/zip code/callsign or whatever other info you can get.

Try switching in the 10 dB attenuator on the PRO 2006 and see if it makes a difference.

You will need to adhere to a half wavelength for your centerfed halfwave dipole project to work. If you want more gain on higher frequencied antenna systems, you will need to stack elements via appropriate phasing harnesses or make your antenna directional.

I wouldn't get too hung up on published sensitivity "specs." In production, some radios will be better, and others will be worse. The published number depends on how conservative or honest the manufacturer is.

Anyway, intermod immunity and image rejection are usually more important.

Now it's my turn. From a professional, I/We have used the Hustler MOR model mounted on an "L" bracket between the front fender and the
hood for the past 15 years. There was times when the hustler would out perform the 1/4 wave on our county radios. All of our police
vehicles (all 15) use the same antenna and are mounted in the same area and work perfect on BC-560XLT scanners.

Why spend your money on an over priced commerical antenna just to receive when this Hustler MOR will do the same if not better at
times.

"God Bless America" for our Volunteers.

Antenna Specialists or Larsen trunk-lip or magnetic mount. Ask your local public safety officials what they prefer and that may also steer you in the right direction.

Try swapping their antennas? Maybe the 1500's antenna happens to be more efficient at that frequency for whatever reason. Not likely, but easy to test.

Ben

ICOM R2 is only about $150 - hardly the most expensive. But I'll agree that scanning is more than just dialing the freq and listening.

1356. Operation of Startac when you call 911?

Newsgroup: rec.radio.scanner
Date: 2002-01-25 00:34:57 UTC
From: Steve Uhrig <Steve@swssec.com>
Message-ID: <ld915us8kgbad2mnm40ef1u29c3m839omn@4ax.com>
Source record: 53424

Hi all,

I wonder if anyone knows intimate details of Startac cell phone operation?

Specifically I am referring to the model 7868W, on Verizon CDMA in the Baltimore system if it matters.

My question is: when I call 911, the phone's readout says 'Emergency Mode'. Even after I hang up, the readout continues to say this until I power down the phone. Operation doesn't seem to be affected.

The phone is in the car kit (the full Convertacom style, with an outboard electronics box, remote antenna, spkr, mic, etc.) when this happens. I haven't had occasion to call 911 when portable. I'm not sure if the message is generated in the phone itself or in the car kit electronics.

I wonder if anything changes in the phone after I call 911, and if so, what? Or did the cats who wrote the firmware merely forget to clear the readout after the 911 call terminates? And, if so, what is the purpose for indicating Emergency Mode in the readout? This pretty much implies something is going on.

Neither Verizon or Motorola tech support knows, nor does the local phone store.

Of course there is nothing mentioned in the manual.

Does anyone have any input on this?

Tks .. Steve

1361. NO MORE UPS FOR ME / Rant / Long

Newsgroup: rec.radio.scanner
Date: 2002-01-25 03:24:37 UTC
From: k3vr@hotmail.com
Message-ID: <4bfc7bb.0201241924.4fdd5373@posting.google.com>
Source record: 53429
Cross-posted to: rec.radio.swap,rec.radio.amateur,rec.radio.scanner,rec.radio.shortwave,rec.radio.amateur.antenna

Get this: I send a package to Colorado via UPS. I label the package with the printed Label ups.com gives you when you have an account with them. I drop off the package at an "Authorized UPS Shipping Center" because it is insured for $3,400 and that is what UPS requires. I get a receipt from the shipping center stating that the item has been properly packed and labeled. OK so far... Four days later a guy in New Jersey at a communications business calls me. "We have your package and we don't know why it came here, but we opened it and read your letter inside. Looks like it is supposed to go to Colorado, what should we do with it?" I tell the guy thanks for calling me and I will call UPS and get back to him. I call 1-800-pickups. The first "support" person hangs up on me. The second says I "should take it up with the shipping center" (all they did was hold it for the truck pickup, the UPS driver in reality should have scanned it upon pickup). I ask to speak to a supervisor. The supervisor is cooperative and I tell her I want the thing overnighted from New Jersey to Colorado since it is "Guaranteed" to be there tomorrow by UPS. She says, "OK, I will call NJ UPS and set that up, they will call you in one hour or less." I thank her VERY much and ask for her name, title, and location. She complies. I am a happy camper. One hour passes, no call, two hours pass, no call. I call UPS back and ask to speak to this individual and... No such individual exists!! By this time it is late so I call and get another person in the morning who tells me to "take it up with the shipper..." I ask to speak to HER Supervisor. Her Supervisor says she will investigate and get back to me.... 7 hours go by. I call her and ask for a status report. Luckily, "she exists." Her answer? "Sir, since the package arrived in NJ and it was signed for; it is considered a completed delivery." I ask, incredulous... "What about my package?" "Sir," she says, "You need to contact the individual in NJ who has your package and ask him to forward it to Colorado for you. Since it was never scanned into our system there will be no charge." UPS at no time took responsibility for this transaction, despite my signed receipt. At no time did they offer a viable solution to a problem they created. At one time I received FALSE information from a UPS employee just to get me off the phone. Hence; I WILL NEVER DEAL WITH UPS AGAIN, and I would urge all persons to carefully consider all other alternatives before trusting anything of value to UPS. Only through the kindness and honesty of an individual in NJ was I able to locate and send my package to its proper destination. Rest assured, when it gets to Colorado, it will not have passed through UPS hands.

> that this is what you meant by a repeater? Should I try and find that
> frequency?

That's the idea...I usually can't even pick up an individual cop's radio, and I usually don't have very good luck picking up the patrol car radios themselves...just about every public safety agency around here uses a trunked system, or has multiple repeater/remote base stations that reduces the need for using a higher powered car mounted radio. Usually, a larger county will install several repeaters around the county, to insure better radio reception, they are typically linked by a dedicated landline, microwave, or even another VHF channel.

Only a very small town is going to operate simplex these days...where everyone talks and listens on the same channel.

I've been using UPS air services for around 10 years now. Everything I've ever sent has been delivered to the intended recipient. Only one package I know of was delivered late -- by a day -- and UPS refunded the shipping charge when I brought it to their attention.

Fed-ex is fine if you are a business, have a city address, are in the
yellow pages, and have a sign out front. If you do not qualify, it's
just TS.
I live in a rural area- UPS found out how to find us country folk, a
long time ago. The first delivery FedEx tried, they got lost three
times, and I finally had to get them to sit still so I could find them,
instead of the other way.
The worst is RPS- they sent a semi to deliver a two pound package, and
got where they couldnt turn around.

Well Murray that pretty good for "OOPs"
Them SOB's just smashed a empty anvil flight case coming back from the R-390 (non A) buyer.
Looks like Godzilla took a big bite then a big _
2 huge holes with this black muck and red oil saturating the foam ...(fork lift ?)
The YL rep say's it was improperly packed...WHAT ?
I dont know, Perhaps this is the new R-390 ventilation mod.
.......Boy am I pissed off !
I cant ship the other radio now

Usually by hitting the 'end' button will clear the 911/Emergency mode, or scroll through your menu for 'end'.

This is done in case there is an emergency and the caller needs to re-dial it quickly. I'm not sure why, but Sprint has the same thing and it may have been mandated by the FCC.

The new version is V 0.0.1.88 B
http://www.barghis.com/bc780xlt

1)the serial communication object completely changed.
2)faster communication with the scanner
3)first try to make the AFS780 work with bc780xlt and bc245xlt

I need feed back from bc245xlt owners because I don't own a bc245xlt and I don't know if will work or not.

Thank you,
-avraam

Actually, you don't need a business address for Fed Ex.

Fed Ex now has a ground service that I've been using for a couple of years. Haven't had any problems with it at all, and it's a heck of a lot cheaper than UPS.

Several years ago, when I owned my own business, I had UPS deliver some C.O.D. packages. I made a mistake and paid for them with cash. A few weeks later, UPS comes back to me and tells me they lost my check and asks me to rewrite the check. When I explained that I paid in cash, they told me I was mistaken, and demanded another check. This went on for a couple of months and then I started getting harrasing phone calls from attorneys representing UPS. It was a total mess, and ended up costing me several thousand dollars. I agree, I'll never use UPS again.

I just use the US Postal Service. Not always the most gentle, the fastest, or the cheapest but it is the most convenient and reliable. I have heard too many horror stories about FedEx and UPS to want to use them for anything. And at least USPS can truly deliver anywhere in the country.

Does anyone have a complete and up-to-date list of the unit id's used by the Wayne County Sheriff Dept.? Recently, they have added several new unit numbering series.

Any help will be greatly appreciated.

Thank you!

Chill out, for one, I hardly think the Icom R2 is the most expensive
scanner on the market.
I bought the R2 based on size and recommendation, then I will learn to use
it to it's full.

So what if I didn't buy a cheap second hand scanner first? would you be
flaming me if I had bought a cheap one and was asking the same question? I
guess the answer is No. Does it really matter what scanner I have? I only
mentioned it incase someone said "Oh, you can't do that with the Icom". If
I didn't mention what scanner I had, someone would have asked me which I
had.

Just my 5 cents worth (obviously I like to waste money)

US Federal Agents do not do illegal home break-ins. They use their warrants
to do that. That makes it legal.
Be more specific. What agency are you talking about. DEA?

> 2. Computers in police cars receiving and transmitting.

Get a frequency counter and use it next time you are in the back seat of the
police car. Again what agency and radio equipment?
Take a look at their equipment over the front seat next time you are there.
Call the local department and ask. Its not a secret.I suggest yuou use one
of your clone cell phones since you home phone is probably tapped.

> 3. Tracking devices secretly hidden under cars by police.

Again use the frequency counter around your car, hopefully the police gave
it back when you got out.

> 4. Small, hidden video surveillance cameras by police.

The mounted cameras in cars? The ones in your house? Is it hard wired? It
wont be on RF then. Again use the frequency counter on the alarm clock by
your scales or microwave oven.

> Thank you.

This is just out of fun. ;)

I just ordered from Universal in Ohio. I asked them to ship via USPS as I have had problems with UPS as I stated in another recent thread. I did have a RS DX-398 stolen by USPS and the box was returned empty! Just so happened I was in a hurry and didn't insure it. Makes me wonder if an uninsured packages are targets for theft, since that's the only one stolen. I filed a complaint but to no avail. They told me there are some dishonest people working for them. :(

>Is there a hand-held out there with the features of the PRO-93, but
>with the performance of the old Regency, in the $200 area ?

If you can't find a receiver to match the Regency but feel you need the features of the newer radios anyway a small preamp might be the ticket. I'm not sure who makes them at this time although the one I use I built from a Ramsey kit. Good luck.
Dennis

I need to buy soon!!

I did'nt know it would be so hard to get scanner recommendations from a scanner newsgroup. Please recommend scanners for me, as I want to purchase soon. I found not even the scanner venders seemed willing to make sugestions.

I DON'T LIKE: ICOMs,YAESUs, or any "mini" recievers.

I LOVE: AR8200 SERIES-2, YUPITERU MVT-9000MKII, DJ-X2000

I'm looking for a full coverage scanner with a "desent" scan rate, good size and VOLUME. I want this for field use so volume and size are a consideration. These scanners should be able to fit into a "tactical" holster/case so the "mini" scanners won't do.

And now the PROBLEM, I want to stay under $399! In that price range all I find are Radio Shack, and "mini" recievers with slow scan rates. I'm upgraging from an old RS scanner so I'm not looking for too much in terms of features. 500+ channels/100+ lockout FQs/10hrs+ battery life...

1382. 780 and CCOM

Thanks to everyone that helped with my previous scan list problem. Dummy(me) should have checked the frequencies to make sure they were all correct..no wonder i would lose the control channel and than it would come back. You would think i would have checked the frequencies after owning 3 scanners previous to the 780. This excercise leads me to believe that the control channel does change and if so, how effective can CCOM be if the control channel changes. Let me know your thoughts.

jfaul@bellsouth.net

FYI, I have winscan 780 and am not real happy with it..data has been lost sometimes when transferring between scanner and PC and vive versa.

I have a scanner in my truck and use a 2 meter ham antenna. Works great over the rubber duckie. I pick up public service repeaters as far as 40-50 miles away and further on a good day! Radio Scam (Shack) sells a decent (not the best) 2 meter magnet mount for 39 bucks and just get the appropriate adapter for your particular scanner. (PL-259 to BNC etc.)

Hi OM,

Why use a third party shipper like those stores ?
Pay the fee and call them for a UPS Pickup and you are using UPS
(or fedex or usps whoever picks the box up)

by using these 'authorized centers' you are under their thumb if an error

is made. Lost or damaged, that third party shipper has to file the claims

with ups/fedex/etc. not you because you are not shipping the box, the
third
party is shipper and selected the carrier ups etc.

Another tip, if you are buying an item from someone either on auction or
swap, do not let the seller ship the item, call UPS or FEDEX and have the
go and pick it up by using the call service. small fee BUT big
difference..

you are now the sender and you can file the claim if lost/stolen/damaged.

otherwise, you are under the thumb of the seller and only seller can file
the
claim with carrier.

Very complicated but once learned you can have your packages arrive !

1385. Re: FED EX - UPS

Newsgroup: rec.radio.scanner
Date: 2002-01-25 16:04:02 UTC
From: Lou <tech@dp.net>
Message-ID: <a2rvn7$1v58$1@news.dp.net>
Source record: 53353
Cross-posted to: rec.radio.swap,rec.radio.amateur,rec.radio.scanner,rec.radio.shortwave,rec.radio.amateur.antenna

While I suppose there is a first time for everything, I've yet to have a problem "with UPS" - myself being a shipper. As for the others, I've had items delivered to me from shippers via Fed Ex, but not RPS. Not even sure if RPS is doing business in our immediate area. I've sent light and heavy items via UPS and never yet a problem or complaints from the receiving parties of any.

Two problems I "did" encounter.....

1. A package that was allegedly shipped and I never received it. NOR did my UPS delivery man recall it. According to the shipper of the item, the item was taken to shipping site. The package and ALL paperwork then disappeared. The tracking number supplied to me at drop off, kept showing "not a valid number". Assuming the shipper did ship it, which I had no reason to doubt as I dealt with them before, sounds more like a clerk problem to me. Though it did take a few weeks to get my money/items replaced, I can't say for certain whose fault that was..... as to the delay to conclude it. Could have been a delay in shipper to start the investigation, the shipping site to do their own investigation. I don't know. All in all, it wasn't too unreasonable an amount of time once I knew "something" was being done about it.

2. Around here, there used to be a few UPS shipping sites. Most stopped taking UPS.. (Mgmt changes they said) Down to about 3 sites within reasonable travel distance, two of them were reasonable in cost both small and large, even with
the site's service fee included. The third was ridiculous.

At the 3rd, I paid as much to send a small box out - as a box 25 times bigger than that - previously from one of the other sites. The other sites are now shut down. I think the 3rd shipping site was over charging on the service fee. I'm not aware of what they are allowed to charge for their fee, so I had no way to challenge it. I suppose I could have said forget it, but the clerk wrote it up before giving me an exact total INCLUDING their fee. Not wanting to look or feel like an idiot (cheap or confrontational) especially without facts to support my claim, I decided to swallow my pride and to let it go this time. But, I've yet to go back. I've been shipping primarily Postal only for that reason - unless I happen to be going near a different site which is a distance away from me.

Now I have to use the charts online for UPS and Postal to get the best rate for the individual package. Personally, I still would prefer UPS. And, if I AM going out and about, I will make the trip to the distant UPS site....

Unless some one can prove to me beyond a shadow of a doubt - otherwise, I don't believe the UPS service itself in any way, was responsible for the two

episodes I experienced.

My company (TFW Inc) has stopped using UPS for similar reasons.

We were receiving a %20 lost shipping and damage rate.

All packages now go thru USPO Priority. Not a single failure in the last 300 ships.

You should have checked old messages within these groups, we have been
talking about avoiding UPS for YEARS!

For packages such as the one you describe, there are other very good
alternatives such as Osborne Air Freight who want to do a good job.

Welcome to the "piss on UPS" crowd.

1393. Re: Frequency Information Needed - Multi Device (intercepting the police)

Newsgroup: rec.radio.scanner
Date: 2002-01-25 17:37:54 UTC
From: N9NWO <N9NWO@amsat.org>
Message-ID: <fj535ugrh9psg7al4u69mn742nk2t5j7el@4ax.com>
Source record: 53361
Cross-posted to: rec.radio.scanner,alt.radio.scanner,alt.law-enforcement

:> 1. Frequencies used during illegal home break-ins by U.S. federal agents.
:
:US Federal Agents do not do illegal home break-ins. They use their warrants
:to do that. That makes it legal.
:Be more specific. What agency are you talking about. DEA?

Each agency has their own set of frequencies. However the federal
government is starting to used trunked radios in the 409 Mhz region.
Now you have to learn about what trunked radio is. The Uniden BC-245
is a good trunked radio receiver.

:> 2. Computers in police cars receiving and transmitting.
:
:Get a frequency counter and use it next time you are in the back seat of the
:police car. Again what agency and radio equipment?
:Take a look at their equipment over the front seat next time you are there.
:Call the local department and ask. Its not a secret.I suggest yuou use one
:of your clone cell phones since you home phone is probably tapped.

Easier to go to Radio Shack and get a copy of Police Call. Most MDTs
(mobile data terminals) use either 700 Mhz or 800 Mhz trunking
systems. However, we are seeing some departments use cellular radios
for their MDTs. That is going to be harder to intercept.

:> 3. Tracking devices secretly hidden under cars by police.
:
:Again use the frequency counter around your car, hopefully the police gave
:it back when you got out.

Even a freq. counter may not be legal to have on the streets. A
better way is to buy the Alinco 2000 radio as it is a scanner that
also has a freq. counter that react tunes the radio (it picks up the
most powerful radio transmitter in the near area and automatically
tunes the radio to that frequency). It is about $600. And you will
need a ham license to have in public.

:> 4. Small, hidden video surveillance cameras by police.
:
:The mounted cameras in cars? The ones in your house? Is it hard wired? It
:wont be on RF then. Again use the frequency counter on the alarm clock by
:your scales or microwave oven.

The cameras are either on 1.2 Ghz or 2.4 Ghz. The ICOM R-3 is a
scanner that also has a TV in it. Great for watching the in car
cameras at the Races.

:> Thank you.
:
:This is just out of fun. ;)

1395. tk8500 v0.3 released. Open source IC-R8500 software.

Newsgroup: rec.radio.scanner
Date: 2002-01-25 19:00:08 UTC
From: Bob_Parnass_AJ9S <parnass@megsinet.net>
Message-ID: <3c51acc8$0$35575$272ea4a1@news.execpc.com>
Source record: 53363
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,alt.radio.scanner

Version 0.3 of tk8500 is now available at:

http://members.core.com/~parnass

tk8500 is open source software designed to control
and program the ICOM IC-R8500 receiver. Programmed using Tcl/Tk,
it runs on Linux, Windows 98, Windows XP, and perhaps MacOS X.

(You must install the free Tcl/Tk interpreter prior to running
tk8500. See web page or instructions.)

Experimental version 0.3 includes several new features, e.g,.:

Added the ability to scan multiple memory channel banks.
Tk8500 reads the bank names from the radio at startup and uses them as
radiobutton labels.

Added Auto Write Scan capability.

tk8500 now reads the 9 pairs of search limits from
the radio at startup, makes them visible in a menu,
and lets you choose among them or specify custom
frequency limits and step size.

Added options to View menu to view or hide the frequency
slew (autotune) buttons, single step frequency buttons,
and slide rule dial widget.

See Release Notes web page for more info.

I don't warrant the software, but it won't cost you anything.

<<snip>>

Rest assured, when it gets to Colorado, it will
> not have passed through UPS hands.

Having said that I, too, would not use UPS, I have broken my word quite a
lot! Most of the
Carolina Cyclone antennas I build and ship go out UPS. I use PVC pipe for
shipping containers, and that has proven to prevent the breakage they are so
notorious for. I used to
get lots of broken coil covers, either by simple mashing, or slinging them
on and off trucks. By
using plenty of packing material (bubble wrap, newspaper, etc), I've had
pretty good results so
far (knock, knock).

When I worked in the rail industry, I used to ship as many as 20 packages
per day. What got me torqued at them was the time I carefully packaged a
boiler water sample, cushioned the plastic jar with several layers of bubble
wrap, and put some foam sheet on the top. The package came back marked
"improperly packaged". The kicker was, it wasn't even the same
box I shipped it in and all that packing was missing! I called them and
received the "Yeah, right!" treatment from the rep, and I went ballistic.
With quite a bit of invective, I explained to
the smart-assed lady that the box wasn't even in the same SOBing box I
shipped it in. I got
pretty sassy (putting it mildly) with her! Finally, I told her, "Tell ya
what, lady. You pull your
records and see how much we ship with you. I happen to be the one that
decides who I am
gonna use, and YOU don't tell me what box I shipped a package in. And from
now on I will
use Fed Ex. YOU can turn it crossways and shove it-- I don't give a ****!"
I started shipping
via alternate shippers, and I guess UPS sort of "missed" our volume because
it wasn't long before one of their suit and tie types was in my warehouse
wanting to know what happened.
I had the chance to tell him, of course, and a chance to get a jab in at
their customer service,
telling him about how their smart-mouthed lady was "able" to tell me what
carton I shipped in.

He, too, was a little upset when he found out that they had switched boxes on me. It took a
lot of promises and begging and several visits from the customer rep before we shipped with them again.

If they pull a caper like that again on me, now that I am running my own business, it'll be a cold
day in you-know-where before I ship with them again.

1397. Can I get a CDROM of FCC Licenses?

Newsgroup: rec.radio.scanner
Date: 2002-01-25 19:24:50 UTC
From: johnfofawn@hotmail.com

Hi,

I'm tired of searching the web trying to find who is transmitting on a particular frequency. Does someone make a CDROM (or multiple CDROMs) that have all the licensed broadcasters listed for my area?

I'd like to be able to enter a frequency and get back a callsign, transmitter location, license name, etc. It'd be cool to also be able to type in a name (like Baltimore Police Department) and see all their frequencies.

I'd prefer not to spend more than a few hundred dollars. I'm in the Baltimore / Washington D.C. area.

Thanks!
John

First, thanks for the suggestion! For size I meant larger, NOT smaller. I
was happy with scanner sizes 7 years ago, and actually prefer those bigger
scanners. I rather have a bigger display for better visibility, more buttons
for easy of use, bigger speakers for more volume, bigger battery case to
hold more batteries for longer battery life, than give that all up for a
scanner that I can loose in my sofa, and need headphones and glasses for.

Thanks though! :)

To add more lunacy to the ranting:

I used to own a small computer business and had to have some parts shipped UPS red (overnight) from Seattle, Wa to Waco, Tx. The next day the package did not arrive, so I called my supplier who said the shipment went out with the other overnight pickups at 4pm. We checked the tracking # supplied, and it shows that the package never made it to the first checkpoint, but WAS picked up. I had a good supplier, so they overnighted me the part again and I received it the following day. Here's the gripper though....about 1 week later, a VERY confused FedEx employee walked into my store with my package. It did not have any FedEx shipping credentials on the box, just the UPS shipping labels and my address! The driver did not know how the package made it anywhere with UPS suff on it in the FedEx system, much less how it ended up in his truck for delivery.....all we can figure is that UPS and FedEx were at my supplier's dock at the same time and my package went with the wrong carrier....

Go figure...

>scroll through your menu for 'end'.

I don't have a problem clearing it. I can do that merely by powering
the phone down and then back up. And probably by just pushing CLEAR or
END. Haven't tried. I don't call 911 that often to where I can play
with the thing to try to learn what is happening.

>This is done in case there is an emergency and the caller needs to re-dial
>it quickly. I'm not sure why, but Sprint has the same thing and it may have
>been mandated by the FCC.

What is done? The mere indication in the readout does nothing. Is the
phone placed in some sort of special mode? That is what I am trying to
determine. If I need to redial. all I need to do is push SEND again.

If anything was mandated by the FCC or anyone else in authority,
someone at either Motorola or Verizon should know about it.

Thanks for sharing, but I still don't understand.

MOT systems have a maximum of four Control Channels. You need to put
all four CC frequencies into the CCOM scanner.

Something that most people don't know about is that the radiation of
mail to eliminate anthrax WILL destroy electronic equipment and part.
There is a somewhat benign warning on www.jedec.org.

Bottom line, don't use the Post Office to mail electronics to zip codes
that begin 202 through 205.

Many of the parcels I deliver for the US postal service are ones that the sender and probably the recipient wanted to go fedX...but fedX remailed it to save themselves a trip.Might as well use the postal service to begin with.

I have a Pro-2005 scanner for sale. I'm asking $175.00 for the scanner. It's
in great shape and works great too.
I don't have the original manual for it, just a copy.

A cheap and very serviceable solution is the new Police Call book, available from Radio Shack that includes a CD ROM which does what you've described. Not as encyclopedic as Percon, but very good for $20. The books are published according to regions, but the CD is national. I use both constantly.

I would like to buy a Radio Shack Pro-2042 1000 channel base scanner. Preferrable from a non-smoking environment with the manual. The box would also be nice, but not a big deal. SHould be in good shape and fully fucntional. if you have one you no longer use, or an extra you wish to turn into cash, send me an e-mail.

Well I have discone from Racky Shack, and love it. All I used for mounting was a 1 5/8's top fencing rail. Just go down to your local chain link fenceing company and tell them what length you need. Mine came in a 24ft. section, had it up in less then an hour. I use mine for both transmitting on vhf-uhf ham bands, and for some excellent scanning. Just make sure you mount it securely and possibly guy wire it down. Make sure you run a good ground wire with it to a water line or grounding rod for safety and BEST recieving results.

Good luck
Bruce

Hello all,

I have been given a HX 1000 hand held scanner. I can get the freqs programed, and it scans, reciever works good, etc, but I can't figure out how to block out the memory channels that I don't want to scan. Can anyone help? I don't have a manual for it, so if anyone would be able to help, let me know how much it cost you for the copy, and I'll gladly reimburse.

Larry

```
:
:> Even a freq. counter may not be legal to have on the streets.
:> A better way is to buy the Alinco 2000 radio as it is a scanner that
:> also has a freq. counter that react tunes the radio (it picks up the
:> most powerful radio transmitter in the near area and automatically
:> tunes the radio to that frequency). It is about $600. And you will
:> need a ham license to have in public.
:
:A frequency counter is Legal to possess and use everywhere at all times.
:http://www.optoelectronics.com/products.htm

The near field receiver is interesting. But I would not suggest using
it in your car unless you have an exemption.

:
:Couldn't find the Alinco 2000, did find the DJ-X2000
:http://www.alinco.com/Products/DJ-X2000/

It is the DJ-X2000

:It does Not have a frequency counter.

It does. From http://www.javiation.co.uk/index2.html

DJ-X2000

The Alinco DJ-X2000 is the world's most advanced
multimode hand held receiver, so advanced Alinco say
they decided to call it Intelligent !

Coverage is 100 KHz to 2150 MHz continuous with no
gaps and 2000 memory channels are available in 50
banks of 40 channels. There are also several features in
the DJ-X2000 not available on any other unit - the in
built frequency counter is a first and allows the radio to
instantly tune to any detected frequency within range of
the counter (this is a near field capability).

Other built in features include CTCSS, two-mode "bug"
detector to allow hidden transmitters to be located, a
record facility that allows up to 160 seconds of audio to
be stored in digital memory and a speech inversion
decoder for analogue scrambled audio together with
other conventional features you would expect in a
modern receiver.
```

DATA between different DJ-X2000's can be cloned
whilst free software available from Alinco allows the unit
to be programmed from a PC - memory and other data
can be uploaded and changes can be made to settings
including the Auto Mode Bandplan.

Main Features

100 KHz ~ 2150 MHz continuous coverage
2000 memory channels in 50 banks, 40 channels
per bank
WFM, NFM, AM, USB, LSB, CW modes in
many different tuning steps, including
user-programmable step.
Fast scan speed
Easy to read dot matrix LCD display
Alphanumeric channel names and name tag search
engine
PC programmable (See software details below)
Help Navigation so powerful, you may never need
the manual (enters directly to the set mode of
relative parameters from the help menu!)
Two-mode "Bug" detector finds hidden
transmitters
Instant search function locks onto the nearest,
strongest signal (new circuit design, patent
pending)
Frequency counter, accurate to 1 ppm, uses digital
TCXO first time in the receiver industry.
Field Strength meter
S-meter activated beep alerts you to nearby calls
Record up to 160 seconds of audio in digital
memory
Inversion decoder for scrambled audio
FM stereo receiver (requires optional stereo
headphones)
CTCSS decoder/tone scan
Two-level attenuator reduces strong or interfering
signals 6 or 20 dB
24 hour timer
Use 10 ~16 VDC external power or internal
batteries (an optional DC cable is required for
external power source)
Battery level indicator and battery save feature
Ni-Cd battery and quick charger included.
New design rubber-duck antenna for better
reception, especially at lower frequencies.

:It does Not transmit on Ham frequencies
:there no ham license is required

Under the laws in most states, hams are exempt from arrest for having a scanner in public. Police, fire fghters, journalists are also exempt. But it is illegal to have a scanner in public or in your car. You can have it in your home or at work.

Larry,

The HX-1000 portable scanner was made for Regency by
Azden. Like other Regency scanners, you lock out channels
by pressing the keys corresponding to the channel
number while scanning.

To reiterate, you can only lock out a channel
while the radio is scanning.

Have fun.

> I agree, I'll never use UPS again.

Why did it cost you any money? You had to pay the driver to get the
package. That is sufficient proof that you paid. If UPS lost the payment,
that is not your fault.

I have been that route. A quick letter from my attorney set them straight.

But I avoid UPS whenever possible. They often leave packages sitting on
my front doorstep in the rain. The sometimes leave packages that require
a signature - good thing that I am honest and don't claim that it was
never delivered.

1424. Is there a decent Cordless phone out there? (900mhz vs 2.4 ghz)

Newsgroup: rec.radio.scanner
Date: 2002-01-26 08:14:20 UTC
From: fj40dana@hotmail.com
Message-ID: <9a118507.0201260014.45286890@posting.google.com>
Source record: 53393

Hello all. I'm a cordless phone junkie. I've had lots of them over the years, and I've found that some of the Uniden Digital Spread Spectrum 900Mhz units seemed to perform the best overall. They went the longest distance with decent clarity, etc. etc. I tried a bunch of the newer 2.4 ghz units (many different brands) and ALL of them have problems. As soon as I get about 75 feet away from the base unit, the signal will flutter, as long as you are moving. If you stop moving, the reception is crystal clear, but as soon as you start to move, it begins to break up again. This is unacceptable to me. My older 900DSS units will allow me to walk around the block and maintain a conversation. The 2.4 ghz units, I can't make it out to the sidewalk.

So, has anyone else found this to be the case? At my local Fry's store, I asked one of the guys in the customer service dept. about this, he said they get lots of 2.4 ghz returns, so I guess it's a common problem.

Anyone found a good phone that works as well as the older 900mhz dss units?

please email me directly at FJ40dana@hotmail.com

thanks

Dana

With people and businesses being sued for things like the coffee was to hot, or your tree was growing over the fence and a host of other stupid things. I suggest you but a radio shack scanner, it doesn't perform the way you want, you sue me for erroneous information. People are gun shy. Yes, I know my comment seems stupid but think about how things are going across the country. By the way, I am not suggesting you go to radio shack.

If you like what you see go for it. As for these groups forget them, it's hard to get a straight answer out of these people.

Most use these groups to vent their frustrations. Why? Who knows..... their coffee was to hot, they didn't get _ _ _ _!!!
You decide.

1433. First/Early Bearcat 210? (Bob Parnass)

Newsgroup: rec.radio.scanner
Date: 2002-01-26 14:46:22 UTC
From: cleit273@aol.com
Message-ID: <20020126094622.07619.00000090@mb-fa.aol.com>
Source record: 53302

Hi,
I have a Bearcat 210 in my collection that differs from the others I own. The back-up battery is mounted inside the scanner on the PCB, instead of the usual holder mounted on the rear panel. Also, instead of the usual " X1111" date code, it has a small white sticker stating "MFG July, 1977." Could this be one of the very early production models?
Lastly, is the Vintage Scanner group gone on Yahoo? I could not find it while doing a search.

Thanks in advance,

Craig

Donovan,
I've been into scannng for 13 years, and I own many scanners, including a Realistic (Radio Shack) PRO-2006, 2 Bearcat 780XLT's, and an Icom R-8500. I recently picked up a PRO-79 since I needed a handheld model. I'm quite satisfied with mine. It offers good performance, and I feel it's well worth what I paid for it.

: >The near field receiver is interesting. But I would not
: > suggest using it in your car unless you have an exemption.
:
: exemption of what?

It is against the law in almost every state for an
individual to have a scanner that can receive police
and public safety frequencies in public or in a car.
Police, fire fighters, journalists and amateur radio
operators are exempted. This is state law, not federal.

: If you are talking about the tyranny of the ECPA?
: The frequency counter displays the only the frequency of the transmitter,
: without the ability to convert the signal into an analog audio signal.
:
: The near-field "reaction tuners" have already had
: the "forbidden frequencies" censored out.
:
: Okay, the Alinco DJ-X2000 from Javiation does have "reaction tune"
capability. The USA version is cellular-censored, there is no need for an
ECPA exemption.

The Alinco DJ-X2000 has those features, the react tune,
in all radios no matter where they are sold. It was just
that the Javiation site had a better review of the product.
Try reading http://www.strongsignals.net on a regular basis.

: > There are also several features in the DJ-X2000 not
: > available on any other unit - the in built frequency counter
: > is a first and allows the radio to instantly tune to any detected
: > frequency within range of the counter (this is a near field capability).
: >The 800MHz cellular band blocked on US models cannot be modified
: > by any means
:
: http://www.javiation.co.uk/dj-x2000.html
:
:
: > Under the laws in most states, hams are exempt from arrest for having
: > a scanner in public. Police, fire fghters, journalists are also exempt.
: > But it is illegal to have a scanner in public or in your car.
: > You can have it in your home or at work.
:
: Most of these laws were written & passed by Liberals, Socialist and
Democrats (LSD) These politicians have absolutely no understanding of

electronics, radio or the real world.
:
: A license from the FCC to transmit on Amateur Radio frequencies has
: now become a state license to receive public safety transmissions.
:
: State scanner laws: we have been through all of this before! Here, you
figure it out!
: http://www.afn.org/~afn09444/scanlaws/ > INDEX: > 2.The Laws >
State Scanner Laws
:
:
: Federal pre-emption of state scanner laws.
:
: Amateur Operator use of transceivers capable of reception
: beyond amateur service frequency allocations:
:
: PR Docket No. 91-36
: http://www.grove-ent.com/LL-FCCdocket.html
:
:
: The "Secret Squirrel" who started this thread is one of those "fear the
police" types.
:
: Maybe he could join the ARRL http://www.arrl.org/ and becomes a
Licensed Amateur Radio Operator. Then he could show his Ham ticket to the
cops and be "exempt from arrest".

True. But then I think that he is more on the edges of
society.

Yes, if it's the 10-channel model it is one of the first. they upgraded it fairly quickly (but before July 77 it seems to me) to the 210 XL. I had one of the very early 10-channel 210s, but I thought the battery was in a black, circular "navel" on the back.

Hmmm. And yes, Vintage Scanners is at http://groups.yahoo.com/group/vintagescanners/

Think about it for a minute.....

How bright could a person be that would willingly do the following:

Accept a job where you work around the clock
Every weekend and holiday
All kinds of weather
For very little money
For absolutely NO support from the people they serve
Criticized at every turn for trying to do their jobs.
DAMNED if you do
DAMNED if you don't
Shot at
Stabbed
Assaulted
Verbally abused
Run over on the highway

And whose job description changes every week with the whims of the
politically correct liberals.....

Only a complete MORON would take that job.

Dan

I had this very samething happen. They put the wrong label on my package and my label on another package thus, the two packages were sent to the wrong parties. I contacted UPS and they took care of it for me. Not willingly at first because they couldn't believe that could happen. They contacted both parties and explain their mistake, picked up the packages, and made it right.

This is why I kinda like the usps - they take just about anything - they don't abuse packages like fedex and ups do and they are much cheaper. Plus they offer insurance, delivery confirmation and other online tracking services.

I agree. I've been shipping my Ebay packages exclusively with Fed-Ex Ground and haven't had a single problem. They are faster, cheaper, and friendlier than UPS will ever be. I haven't had them once ask about how an item was packaged or opened a package at the counter to find out. Fed-Ex Ground will usually beat their "estimated delivery date" by a day or two and they've been known to deliver packages on Saturdays and Sundays at no extra charge.

1457. Does my Radio Shack PRO-93 have the alpha tag overlay bug ??

Newsgroup: rec.radio.scanner
Date: 2002-01-27 02:09:58 UTC
From: nweiler@nac.net
Message-ID: <7225aa4b.0201261809.64829c02@posting.google.com>
Source record: 53326

Hi again,

I have a new PRO-93, with 7 more days left on my 30-day return period. I've read a lot about the alpha tag problem. Some user group members have the problem - some don't. I have firmware version 1.00. I tried to determine if mine had the problem by putting a text tag on bank 0 chan 05, then putting a different tag on bank 9 chan 05. I returned to 005 - it was still OK. I then put a new tag on 005, then went back up to 905, and that tag was still OK.

Is my unit OK, or does the overlay occur with the downloading of tags from the computer. In other words, will all bank 0 channel tags overwrite the bank 9 channel tags on the download (or vice-versa)? I don't yet have the download cable to test this.

Thanks again for your help.

Yes, if you want to pay 30 bucks more then they are sale for at the Shack.
The 2053 at Scanners Unlimited is 249 bucks, on sale at the shack for 179.

I guess Scanners unlimited is the way to go, instead of simply calling the
Rat Shack stores and having them hold one for you.

I will never use them and I'll bet most of the people standing up for them either work there or own stock in the company! There is no way they can give proper care to your parcels as they hire college kids and most of the handlers are replaced every semester, I worked there and they had no training, no breaks, and you were told to run to the time clock when they got to the point they could spare you for the night.

I had a person ship an item to me ups and it arrived with a split in it, from a drop of at least 10 feet. They acted decent on the phone, but gave me the royal run around. They give you a step by step process that just goes on and on until most people give up. They wanted to have a driver pick the item up and then give it a ride back to the original shipper and have him deal with the damage----but I had already paid the individual for it, and he had little motivation to collect for me! I was told by ups that I had no rights to make a claim, as if I had no idea what the item was worth, although I had just paid for it!

At first they said that if the claim amount was less than $100, they could just pay me and let me keep the item. When I took the package up to the ups customer service office here, the girl started telling me she could not do what she had said earlier on the phone and again started to try to just send it back to the sender. I asked for her supervisor. Now I got the full UPS BS--it was probably shipped pre-damaged, it was re-used packaging, it was improperly packaged, etc. The fact you have insurance means nothing, they can still use all their delay tactics on you until you give up. They would only send it back to the shipper, and he had to spend a lot of time going around and around with them to get the claim paid a long time later.

The sick thing about this is that people use UPS authorized service centers that are conveniently nearby, and most people think it is the same rate everywhere just like the post office! In reality the Mailbox etc. and all of them charge whatever they want---and most people never question it. For what you are paying you could be paying less for FedEx overnight! The last time I went to Mailbox Etc. they wanted $36, I asked how much of that was their upcharge and they said, we don't know, it is figured in the computer! I drove it over to the real UPS shipping office and it was only $18!

A good friend told me once,

A community that makes an enemy of it's police better become damn good friends with the criminals!

Unless, you have a better plan, of course. If you do, present it , and maybe we can eliminate those damn troublesome police departments, in favor of a kinder , gentler, more warm and fuzzy alternative offered up by Glen and his ilk.....

Haven't seen one yet, but still waiting...

Dan

A few of the manuals are pdf format exact reprints of the manual, but I can't figure out how to print them without the little targets all around them in the huge margins on each page. Most of the online information are NOT the original and not as good, although they will certainly get you by. I was amazed how much more stuff was in the original manuals once I got the real thing.

Here's the thing, no they are not getting rid of the entire line of components. They are trimming back some of the stuff that has little to no movement as these product take up 30-50% of most stores and only accounts for 2% of the revenue. You wouldn't make the biggest rooms in your house closets would you? No, you use them for what you do most; eat, sleep and recreation. Secondly alot of the stuff they are eliminating I think you will see return in the form of more variety pack (I know you're all gonna moan, "but I just want this one, why do I need to buy all the others?") Also some stores I have heard are going to be getting a drawer setup, kinda like what you might see at a hardware store to keep the packages in to minimize the space taken up, but maximize what they can carry. Most Shack customers tend to be understanding from my observation. Hopefully those of you who enjoy reason will find solace in this note.

Is radio Shack the only electronics store in town? I dont know about you, but i can buy hand fulls of damn near any resistor, cap, diode, choke, etc from one of at least 2 electronics stores that sell parts here in town. If nothing else, order them from offline lol.. i know, its rediculas to order 2 resistors and pay 4 or 5 bucks in S&H, but its amazed me how many people actually are bent over this. Well they've discontinued a number of small things i've bought tons of over the years that i recently couldnt find any of. What the hell happened to their cigarette adaptore ends that you wired yourself? Thats only one of about 6 things hehe.. anyway i can somewhat share the frustration, but i've bought 99.98% of all my parts from other sources, hell even a CB shop at the truck stop was a source way back in the day lol.

They wish they had answers, what a stupid slogan for a company such as
this...
You would be lucky to find more than 1 radio shack employee per county
that has half a brain. The rest are drones that almost always have to ask
the manager, who has to call FW Texas for assistance before you can find
out if they have a Germanium diode they can mail you for $0.02 and $29.95
S&H or if they have a AAA battery.

I live in NJ, and as populated as it is, RS is the only local store has discrete components. Just out of curiosity David, where are you from? Silicon Valley area?

Years ago there was a store about 1/2 hour away that had several hundred bins of components and
surplus parts. No shrink wrap, just the parts moderately priced.
Any electronic enthusiast who went there felt like a kid in a candy store.

Al

On the RS web site the 93 is on sale for $169.99 and the 2053 is not currently on sale, although who knows what February will bring. The sale price on the 2053 was $179.99 last time it was on sale.

That is really sad. Says a lot about a guy so negative about the world
carrying a gun. Maybe YOU don't get what you whine about because you
don't deserve it. Possibly you should get a job that you don't hate so
badly. You certainly can't be very good at what you do if you believe
what you are saying here.

> >
> > Glenn

Well Glenn, guess you missed my point. You know very well that cops don't actually work 24 hours a day ,literally. You cannot be that dumb. If my attempt to make my point here was whining, then so be it. In all the years I've been on the groups, every time I take a position someone else doesn't like, it's "whining"...Sheeesh, can't you be more original?

> > What about the Patrol Officers? Oh, I forgot, they close after 5PM and

> Dan.

I didn't? It is you who have the perception problem. I speak about the fact that cops work around the clock, weekends and holidays, and you tell me about Detectives working 9 - 5 in Tacoma. What didn't I understand? What did I add? BTW, in all my threads in this matter, and responses to you, did I ever call you a name? Once again, when you have nothing intelligent to add, call someone an ass. Typical. ALso, what does "upright" mean?

> > > Depends where in the country you work.
> > >
> > Try NYC cops, for a start.
>
> What do they make Dan? Start and top?

NYC officers are among the lowest paid big city cops in the country. I do not know the exact figures, but if you check, you will see what I mean, and be surprised at what you find, but then again, you probably think ALL cops are overpaid anyway.

Here we go with the wine, er I mean WHINE nonsense again. (actually, I like a nice Merlot) IS that the only response you know? If you are so bored with my whining, why are you responding to it?
And yes, we get NO support, but then, only a real cop would know that. The rest of the you simply YAWN.

> >
> > Again, please give me a break
>
> Teachers don't?

I understand the point you are trying to make here, Glenn, and I never said that the police are the only ones to get shot, stabbed, etc., and so on. Once again, you missed the point of my original statement. But let me ask you this....

Do teachers, bankers, deer, butchers and candlestick makers stop cars on the highway at 3 AM? Response to bank hold ups? Break up domestic violence calls? And so on? I don't think so...Well, at least I know the deer don't...
> > > > Stabbed

You can believe what you want, you don't know me and you probably don't want
to. If you can see past your myopic vision of what it takes to make OUR
society safe, we might have a different conversation.
> > >
> > > Glenn

Once again, you make no sense and resort to calling me names. I get this
all the time from the likes of you on the job. YOU make all my points here
very well.

> > Unless, you have a better plan, of course. If you do, present it , and

You never saw a rhetorical, sarcastic question before? I can't help you on
that one.

I
> just didn't agree that your perception of the public and its treatment
> of the police so you start the name calling and crap.

I challenge you to produce an example from this thread where I called you a
name. Politically correct liberal doesn't count, IMHO. You probably wear
that as a badge of honor. However, you calling me an ASS and JACKASS
really doesn't help your case at all.

>Sorry, I did realize you are a expert on police >departments throughout the country.

Well, I never professed to be an expert on the country, but my credentials in my field are quite numerous. But, if you DID realize my expertise, I commend you.

> Guessed you missed a few or were they just exceptions too?

Missed a few what, son?
>
>
> Sorry you hate your job so much Dan. Must be hell!

Actually, I love my job, and will defend it and the people who do it to the end. That was the point of my original response here, in it's sarcastic presentation. Unfortunately, you took the bait and fell into the trap. A minor troll at best...!

;) Dan

This thread was interesting until I got tired of reading through the various paragraphs to find the responses.

FACT about COPS: If you haven't been there you wouldn't understand.

Interesting thread although it was totally OFF the subject topic.

Yes, I am sure your radio has the bug. All the folks I have seen who have said theirs didn't later found out they did. The firmware in the radio is still the same for everyone (ver 1.00) so they ALL have it until there is a newer firmware released and that is not likely to happen anytime soon.

I think you may have some bad info. Alpha Tag Memory Map beginning with 000 is duplicated at positions 816 thru 930. So, your alphatag on chan 005 should overlay with channel 821. In order to see this, program what you want in channel 005. Then go a program a alphatag in channel 821 (don't just look at the default - you must program something in there). Then go back and look at channel 005 and it will have changed to match what you just put in 821. Also, this only affects Channel alphatags and not Trunking talkgroup tags. The problem has nothing to do with dowloading but it is the surest way to show it.

I still wouldn't return the radio since Radio Shack has no fix for the problem and you aren't likely to find a better deal even with the bug. Unless you can use a base station scanner. If so, the PRO-2053 is basically the same radio but it does have newer firmware without the bug. But that is just my opinion. You have to decide what is best for you.

John

1480. FS: SCOUT Optoelectronics Model 40 Mint $275

Optoelectronics SCOUT Model 40.
Never carried on person. Mint condition.
Case, charger. Stubby antennae.
Works perfectly.
Looking to buy Xplorer.
Asking $275 or make offer.
Can email photo if seriously interested.

DO NOT REPLY TO THIS GROUP.
Please email me direct or call.
Remove the REMOVETHIS to email me.

I've just received the answer (thanks John) to my own post. The Alpha
Tag Memory Map beginning with 000 is duplicated at positions 816 thru
930. I've read through so many posts on the PRO-93 lately that I
probably just glossed over the actual range of freqs affected by the
overlay and somehow got it into my head that all channels in bank 9
overlaid all channels in bank 0.

Mine DOES have that problem after all.

I'm starting to see some posts on Yahoo's PRO-93 group that indicate
firmware 1.03 is now out.

Yes, I have seen you trolling for a long time Dan. You are good at
that.

BTW, we can then assume that honest cops are just an exception. All
cops are of the Rodney King variety and the rest are just fall under
the category of an anomaly (not anomoly). Thanks for proving that Dan.

A cop like you that feels that all the citizens are out to get them
and all the citizens disrespect them is a piss poor excuse for a cop.
You need to change occupations. Maybe a StopNGo clerk would fit you
better. :-)

Sorry I don't agree with your right wing conservative spew uhhh troll
Dan. You cops are all killers and on the take. You like to beat
prisoners and rape them with broom handles. Guess you cops made your
bed and now WHINE when you have to sleep in it. Or is that just an
anomaly

Well Glenn, I will agree with another responder here that this has gotten way off topic and a bit out of hand. It has been a pleasure debating you on this topic, and although we obviously disagree, we can agree to disagree and still part as friends.

Your statement above, although troubling, is what I knew would be coming from you all along, and speaks better to this subject then I ever could.

Dan

.....

Albert Einstein: A Jewish Myth

One of the statements of Adolf Hitler most often quoted by the Jewish media is the following from Mein Kampf, I:10:

"The great masses of people ... will more easily fall victims to a big lie than to a small one."

Of course, Hitler is quoted out of context in an attempt to portray this statement as Hitler's own, personal philosophy or strategy. But if we read this selection in context, we find that he is speaking of the Jews who had ruined his country, and he is trying to explain how the German people fell victim to Jewish lies. In fact, Herr Hitler even tells us what this great lie is that duped the German people into being controlled by the Jews. He continues:

"Those who know best this truth about the possibilities of the application of untruth and defamation, however, were at all times the Jews; for their entire existence is built on one single great lie, namely, that here one had to deal with a religious brotherhood, while in fact one has to deal with a race - what a race! As such they have been nailed down forever, in an eternally correct sentence of fundamental truth, by one of the greatest minds of mankind; he called them 'the great masters of lying.' He who does not realize this or does not want to believe this will never be able to help truth to victory in this world."

Hitler here was referring to Arthur Schopenhauer, the eminent 19th century German philosopher who was outspoken regarding the true nature of Jews. We do not need to rely upon the opinions of German philosophers and political leaders regarding this character trait of the Jews, for Jesus Christ has said of the Jews,

"You are of your father the Diabolical One, and the lusts of your father you wish to do. That one was a murderer from the beginning, and he has not stood in the truth because there is no truth in him. When he speaks a lie, he speaks of his own, because he is a liar, and the father of it" (John 8:44 AST).

Furthermore, the New Testament warns us not to listen to "Judaizing myths" (Titus 1:14). But Jewish myths are exactly what destroyed Germany and what have destroyed America today. Herr Hitler may have been correct in what he felt was the greatest Jewish lie, but there are many, many more which have had a damning effect on the white race.

One of the greatest is certainly the lie of the Hebrew Masoretic Text and the removal of the Greek Septuagint from the hands of white Christians, but each Jewish myth stings with the same poisonous venom. One of the great Jewish myths of the 20th century is Albert Einstein.

Albert Einstein is held up by the Jewish liars as a rare genius who drastically changed the field of theoretical physics. As such, he is made an idol to young people and his very name has become synonymous with genius. The truth, however, is very different. The reality is that Einstein was an inept, moronic Jew who could not even tie his own shoelaces; he contributed nothing original to the field of quantum mechanics or any other science, but on the contrary he stole the ideas of other men and the Jewish media made him a hero.

When we actually examine the life of Albert Einstein, we find that his only brilliance lies in his ability to plagiarize and steal other people's ideas, passing them off as his own.

Einstein's education, or lack thereof, is an important part of this story. The Encyclopedia Britannica says of Einstein's early education that he "showed little scholastic ability." It also says that at the age of 15, "with poor grades in history, geography, and languages, he left school with no diploma." Einstein himself wrote in a school paper of his "lack of imagination and practical ability." In 1895, Einstein failed a simple entrance exam to an engineering school in Zurich. This exam consisted mainly of mathematical problems, and Einstein showed himself to be mathematically inept in this exam. He then entered a lesser school hoping to use it as a stepping stone to the engineering school he could not get into, but after graduating in 1900, he still could not get a position at the engineering school! Unable to go to the school as he had wanted, he got a job (with the help of a friend) at the patent office in Bern. He was to be a technical expert third class, which meant that he was too incompetent for a higher qualified position. Even after publishing his so-called groundbreaking papers of 1905 and after working in the patent office for six years, he was only elevated to a second class standing. Remember, the work he was doing at the patent office, for which he was only rated third class, was not quantum mechanics or theoretical physics, but was reviewing technical documents for patents of every day things; yet he was barely qualified.

He would work at the patent office until 1909, all the while continuously trying to get a position at a university, but without success. All of these facts are true, but now begins the Jewish myth. Supposedly, while working a full time job, without the aid of university colleagues, a staff of graduate students, a laboratory, or any of the things normally associated with an academic setting, Einstein in his spare time wrote four ground-breaking essays in the field of theoretical physics and quantum mechanics that were published in 1905. Many people have recognized the impossibility of such a feat, including Einstein himself, and therefore Einstein has led people to

believe that many of these ideas came to him in his sleep, out of the blue, because indeed that is the only logical explanation of how an admittedly inept moron could have written such documents at the age of 26 without any real education. However, a simpler explanation exists: he stole the ideas and plagiarized the papers.

Therefore, we will look at each of these ideas and discover the source of each. It should be remembered that these ideas are presented by Einstein's worshippers as totally new and completely different, each of which would change the landscape of science. These four papers dealt with the following four ideas, respectively:

1. The foundation of the photon theory of light;
2. The equivalence of energy and mass;
3. The explanation of Brownian motion in liquids;
4. The special theory of relativity.

Let us first look at the last of these theories, the theory of relativity. This is perhaps the most famous idea falsely attributed to Einstein. Specifically, this 1905 paper dealt with what Einstein called the Special Theory of Relativity (the General Theory would come in 1915). This theory contradicted the traditional Newtonian mechanics and was based upon two premises: 1) in the absence of acceleration, the laws of nature are the same for all observers; and 2) since the speed of light is independent of the motion of its source, then the time interval between two events is longer for an observer in whose frame of reference the events occur at different places than for an observer in whose frame of reference the events occur in the same place. This is basically the idea that time passes more slowly as one's velocity approaches the speed of light, relative to slower velocities where time would pass faster.

This theory has been validated by modern experiments and is the basis for modern physics. But these two premises are far from being originally Einstein's. First of all, the idea that the speed of light was a constant and was independent of the motion of its source was not Einstein's at all, but was proposed by the Scottish scientist James Maxwell. Maxwell studied the phenomenon of light extensively and first proposed that it was electromagnetic in nature. He wrote an article to this effect for the 1878 edition of the Encyclopedia Britannica. His ideas prompted much debate, and by 1887, as a result of his work and the ensuing debate, the scientific community, particularly Lorentz, Michelson, and Morley reached the conclusion that the velocity of light was independent of the velocity of the observer. Thus, this piece of the Special Theory of Relativity was known 27 years before Einstein wrote his paper.

This debate over the nature of light also led Michelson and Morley to conduct an important experiment, the results of which could not be explained by Newtonian mechanics. They observed a phenomenon caused by relativity but they did not understand relativity. They had attempted to detect the motion of the earth through ether, which was a medium

thought to be necessary for the propagation of light.

In response to this problem, in 1889, the Irish physicist George FitzGerald, who had also first proposed a mechanism for producing radio waves, wrote a paper which stated that the results of the Michelson-Morley experiment could be explained if,

"... the length of material bodies changes, according as they are moving through the ether or across it, by an amount depending on the square of the ratio of their velocities to that of light."

This is the theory of relativity, 13 years before Einstein's paper!

Furthermore, in 1892, Hendrik Lorentz, from The Netherlands, proposed the same solution and began to greatly expand the idea. All throughout the 1890's, both Lorentz and FitzGerald worked on these ideas and wrote articles strangely similar to Einstein's Special Theory detailing what is now known as the Lorentz-FitzGerald Contraction. In 1898, the Irishman Joseph Larmor wrote down equations explaining the Lorentz-FitzGerald contraction and its relativistic consequences, 7 years before Einstein's paper. By 1904, Lorentz transformations, the series of equations explaining relativity, were published by Lorentz. They describe the increase of mass, the shortening of length, and the time dilation of a body moving at speeds close to the velocity of light. In short, by 1904, everything in Einstein's paper regarding the Special Theory of Relativity had already been published.

The Frenchman Poincar&#65533; had, in 1898, written a paper unifying many of these ideas. He stated seven years before Einstein's paper that,

"... we have no direct intuition about the equality of two time intervals. The simultaneity of two events or the order of their succession, as well as the equality of two time intervals, must be defined in such a way that the statements of the natural laws be as simple as possible."

Anyone who has read Einstein's 1905 paper will immediately recognize the similarity and the lack of originality on the part of Einstein. Thus we see that the only thing original about the paper was the term 'Special Theory of Relativity.' Everything else was plagiarized. Over the next few years, Poincar&#65533; became one of the most important lecturers and writers regarding relativity, but he never, in any of his papers or speeches, mentioned Albert Einstein. Thus, while Poincar&#65533; was busy bringing the rest of the academic world up to speed regarding relativity, Einstein was still working in the patent office in Bern and no one in the academic community thought it necessary to give much credence or mention to Einstein's work. Most of these early physicists knew that he was a fraud.

This brings us to the explanation of Brownian motion, the subject of another of Einstein's 1905 papers. Brownian motion describes the irregular motion of a body arising from the thermal energy of the

molecules of the material in which the body is immersed. The movement had first been observed by the Scottish botanist Robert Brown in 1827. The explanation of this phenomenon has to do with the Kinetic Theory of Matter, and it was the American Josiah Gibbs and the Austrian Ludwig Boltzmann who first explained this occurrence, not Albert Einstein. In fact, the mathematical equation describing the motion contains the famous Boltzmann constant, k. Between these two men, they had explained by the 1890s everything in Einstein's 1905 paper regarding Brownian motion.

The subject of the equivalence of mass and energy was contained in a third paper published by Einstein in 1905. This concept is expressed by the famous equation E=mc^2. Einstein's biographers categorize this as "his most famous and most spectacular conclusion." Even though this idea is an obvious conclusion of Einstein's earlier relativity paper, it was not included in that paper but was published as an afterthought later in the year. Still, the idea of energy-mass equivalence was not original with Einstein.

That there was an equivalence between mass and energy had been shown in the laboratory in the 1890s by both J.J. Thomsom of Cambridge and by W. Kaufmann in G�ttingen. In 1900, Poincar� had shown that there was a mass relationship for all forms of energy, not just electromagnetic energy. Yet, the most probable source of Einstein's plagiarism was Friedrich Hasen�hrl, one of the most brilliant, yet unappreciated physicists of the era. Hasen�hrl was the teacher of many of the German scientists who would later become famous for a variety of topics. He had worked on the idea of the equivalence of mass and energy for many years and had published a paper on the topic in 1904 in the very same journal which Einstein would publish his plagiarized version in 1905. For his brilliant work in this area, Hasen�rhl had received in 1904 a prize from the prestigious Vienna Academy of Sciences.

Furthermore, the mathematical relationship of mass and energy was a simple deduction from the already well-known equations of Scottish physicist James Maxwell. Scientists long understood that the mathematical relationship expressed by the equation E=mc^2 was the logical result of Maxwell's work, they just did not believe it. Thus, the experiments of Thomson, Kaufmann, and finally, and most importantly, Hasen�rhl, confirmed Maxwell's work. It is ludicrous to believe that Einstein developed this postulate, particularly in light of the fact that Einstein did not have the laboratory necessary to conduct the appropriate experiments.

In this same plagiarized article of Einstein's, he suggested to the scientific community, "Perhaps it will prove possible to test this theory using bodies whose energy content is variable to a high degree (e.g., salts of radium)." This remark demonstrates how little Einstein understood about science, for this was truly an outlandish remark. By saying this, Einstein showed that he really did not understand basic

scientific principles and that he was writing about a topic that he did not understand. In fact, in response to this article, J. Precht remarked that such an experiment "lies beyond the realm of possible experience."

The last subject dealt with in Einstein's 1905 papers was the foundation of the photon theory of light. Einstein wrote about the photoelectric effect. The photoelectric effect is the release of electrons from certain metals or semiconductors by the action of light. This area of research is particularly important to the Einstein myth because it was for this topic that he unjustly received his 1922 Nobel Prize.

But again, it is not Einstein, but Wilhelm Wien and Max Planck who deserve the credit. The main point of Einstein's paper, and the point for which he is given credit, is that light is emitted and absorbed in finite packets called quanta. This was the explanation for the photoelectric effect. The photoelectric effect had been explained by Heinrich Hertz in 1888. Hertz and others, including Philipp Lenard, worked on understanding this phenomenon. Lenard was the first to show that the energy of the electrons released in the photoelectric effect was not governed by the intensity of the light but by the frequency of the light. This was an important breakthrough.

Wien and Planck were colleagues and they were the fathers of modern day quantum theory. By 1900, Max Planck, based upon his and Wien's work, had shown that radiated energy was absorbed and emitted in finite units called quanta. The only difference in his work of 1900 and Einstein's work of 1905 was that Einstein limited himself to talking about one particular type of energy - light energy. But the principles and equations governing the process in general had been deduced by Planck in 1900. Einstein himself admitted that the obvious conclusion of Planck's work was that light also existed in discrete packets of energy. Thus, nothing in this paper of Einstein's was original.

After the 1905 papers of Einstein were published, the scientific community took little notice and Einstein continued his job at the patent office until 1909 when it was arranged for him to take a position at a school by World Jewry. Still, it was not until a 1919 newspaper headline that he gained any notoriety.

With Einstein's academic appointment in 1909, he was placed in a position where he could begin to use other people's work as his own more openly. He engaged many of his students to look for ways to prove the theories he had supposedly developed, or ways to apply those theories, and then he could present the research as his own or at least take partial credit. In this vein, in 1912, he began to try and express his gravitational research in terms of a new, recently developed calculus, which was conducive to understanding relativity. This was the beginning of his General Theory of Relativity, which he would publish in 1915. But the mathematical work was not done by

Einstein - he was incapable of it. Instead, it was performed by the mathematician Marcel Grossmann, who in turn used the mathematical principles developed by Berhard Riemann, who was the first to develop a sound non-Euclidean geometry, which is the basis of all mathematics used to describe relativity.

The General Theory of Relativity applied the principles of relativity to the universe; that is, to the gravitational pull of planets and their orbits, and the general principle that light rays bend as they pass by a massive object. Einstein published an initial paper in 1913 based upon the work which Grossmann did, adapting the math of Riemann to Relativity. But this paper was filled with errors and the conclusions were incorrect. It appears that Grossmann was not smart enough to figure it out for Einstein. So Einstein was forced to look elsewhere to plagiarize his General Theory. Einstein published his correct General Theory of Relativity in 1915, and said prior to its publication that he, "...completely succeeded in convincing Hilbert and Klein." He is referring to David Hilbert, perhaps the most brilliant mathematician of the 20th century, and Felix Klein, another mathematician who had been instrumental in the development of the area of calculus that Grossmann had used to develop the General Theory of Relativity for Einstein.

Einstein's statement regarding the two men would lead the reader to believe that Einstein had changed Hilbert's and Klein's opinions regarding General Relativity, and that he had influenced them in their thinking. However, the exact opposite is true. Einstein stole the majority of his General Relativity work from these two men, the rest being taken from Grossmann. Hilbert submitted for publication, a week before Einstein completed his work, a paper which contained the correct field equations of General Relativity. What this means is that Hilbert wrote basically the exact same paper, with the same conclusions, before Einstein did. Einstein would have had an opportunity to know of Hilbert's work all along, because there were Jewish friends of his working for Hilbert. Yet, even this was not necessary, for Einstein had seen Hilbert's paper in advance of publishing his own. Both of these papers were, before being printed, delivered in the form of a lecture.

Einstein presented his paper on November 25, 1915 in Berlin and Hilbert had presented his paper on November 20 in G&#65533;ttingen. On November 18, Hilbert received a letter from Einstein thanking him for sending him a draft of the treatise Hilbert was to deliver on the 20th. So, in fact, Hilbert had sent a copy of his work at least two weeks in advance to Einstein before either of the two men delivered their lectures, but Einstein did not send Hilbert an advance copy of his. Therefore, this serves as incontrovertible proof that Einstein quickly plagiarized the work and then presented it, hoping to beat Hilbert to the punch. Also, at the same time, Einstein publicly began to belittle Hilbert, even though in the previous summer he had praised him in an effort to get Hilbert to share his work with him. Hilbert

made the mistake of sending Einstein this draft copy, but still he delivered his work first.

Not only did Hilbert publish his work first, but it was of much higher quality than Einstein's. It is known today that there are many problems with assumptions made in Einstein's General Theory paper. We know today that Hilbert was much closer to the truth. Hilbert's paper is the forerunner of the unified field theory of gravitation and electromagnetism and of the work of Erwin Schr&#65533;dinger, whose work is the basis of all modern day quantum mechanics.

That the group of men discussed so far were the actual originators of the ideas claimed by Einstein was known by the scientific community all along. In 1940, a group of German physicists meeting in Austria declared that "before Einstein, Aryan scientists like Lorentz, Hasen&#65533;hrl, Poincar&#65533;, etc., had created the foundations of the theory of relativity..."

However, the Jewish media did not promote the work of these men. The Jewish media did not promote the work of David Hilbert, but instead they promoted the work of the Jew Albert Einstein. As we mentioned earlier, this General Theory, as postulated by Hilbert first and in plagiarized form by Einstein second, stated that light rays should bend when they pass by a massive object. In 1919, during the eclipse of the Sun, light from distant stars passing close to the Sun was observed to bend according to the theory. This evidence supported the General Theory of Relativity, and the Jewish-controlled media immediately seized upon the opportunity to prop up Einstein as a hero, at the expense of the true genius, David Hilbert.

On November 7th, 1919, the London Times ran an article, the headline of which proclaimed, "Revolution in science - New theory of the Universe - Newtonian ideas overthrown." This was the beginning of the force-feeding of the Einstein myth to the masses. In the following years, Einstein's earlier 1905 papers were propagandized and Einstein was heralded as the originator of all the ideas he had stolen. Because of this push by the Jewish media, in 1922, Einstein received the Nobel Prize for the work he had stolen in 1905 regarding the photoelectric effect.

The establishment of the Einstein farce between 1919 and 1922 was an important coup for world Zionism and Jewry. As soon as Einstein had been established as an idol to the popular masses of England and America, his image was promoted as the rare genius that he is erroneously believed to be today. As such, he immediately began his work as a tool for World Zionism. The masses bought into the idea that if someone was so brilliant as to change our fundamental understanding of the universe, then certainly we ought to listen to his opinions regarding political and social issues. This is exactly what World Jewry wanted to establish in its ongoing effort of social engineering. They certainly did not want someone like David Hilbert to be

recognized as rare genius. After all, this physicist had come from a strong German, Christian background. His grandfather's two middle names were 'F&#65533;rchtegott Leberecht' or 'Fear God, Live Right.' In August of 1934, the day before a vote was to be taken regarding installing Adolf Hitler as President of the Reich, Hilbert signed a proclamation in support of Adolf Hitler, along with other leading German scientists, that was published in the German newspapers. So the Jews certainly did not want David Hilbert receiving the credit he deserved.

The Jews did not want Max Planck receiving the credit he deserved either. This German's grandfather and great-grandfather had been important German theologians, and during World War II he would stay in Germany throughout the war, supporting his fatherland the best he could.

The Jews certainly did not want the up-and-coming Erwin Schr&#65533;dinger to be heralded as a genius to the masses. This Austrian physicist would go on to teach at Adolf Hitler University in Austria, and he wrote a public letter expressing his support for the Third Reich. This Austrian's work on the unified field theory was a forerunner of modern physics, even though it had been criticized by Einstein, who apparently could not understand it.

The Jews did not want to have Werner Heisenberg promoted as a rare genius, even though he would go on to solidify quantum theory and contribute to it greatly, as well as develop his famous uncertainty principle, in addition to describing the modern atom and nucleus and the binding energies that are essential to modern chemistry. No, the Jews did not want Heisenberg promoted as a genius because he would go on to head the German atomic bomb project and serve prison time after the war for his involvement with the Third Reich.

No, the Jews did not want to give credit to any of a number of white Germans, Austrians, Irishmen, Frenchmen, Scotsmen, Englishmen, and even Americans who had contributed to the body of knowledge and evidence from which Einstein plagiarized and stole his work. Instead, they needed to erect Einstein as their golden calf, even though he repeatedly and often embarrassed himself with his nonfactual or nearsighted comments regarding the work he had supposedly done. For example, in 1934, the Pittsburgh Post-Gazette ran a front page article in which Einstein gave an "emphatic denial" regarding the idea of practical applications for the "energy of the atom." The article says,

"But the 'energy of the atom' is something else again. If you believe that man will someday be able to harness this boundless energy-to drive a great steamship across the ocean on a pint of water, for instance-then, according to Einstein, you are wrong..."

Again, Einstein clearly did not understand the branch of physics he had supposedly founded, though elsewhere in the world at the time theoretical research was underway that would lead to the atomic bomb

and nuclear energy. But after Einstein was promoted as a god in 1919, he made no real attempts to plagiarize any other work. Rather, he began his real purpose - evangelizing for the cause of Zionism and World Jewry. Though he did publish other articles after this time, all of them were co-authored by at least one other person, and in each instance, Einstein had little if anything to do with the research that led to the articles; he was merely recruited by the co-authors in order to lend credence to their work. Thus freed of the pretense of academia, Einstein began his assault for World Zionism.

In 1921, Einstein made his first visit to the United States on a fund-raising tour for the Hebrew University in Jerusalem and to promote Zionism. In April of 1922, Einstein used his status to gain membership in a Commission of the League of Nations. In February of 1923, Einstein visits Tel Aviv and Jerusalem. In June of 1923, he becomes a founding member of the Association of Friends of the New Russia. In 1926, Einstein took a break from his Communist and Zionistic activities to again embarrass himself scientifically by criticizing the work of Schr&#65533;dinger and Heisenberg. Following a brief illness, he resumes his Zionistic agenda, wanting an independent Israel and at the same time a World Government.

In the 1930s he actively campaigns against all forms of war, although he would reverse this position during World War II when he advocated war against Germany and the creation of the atomic bomb, which he thought was impossible to build. In 1939 and 1940, Einstein, at the request of other Jews, wrote two letters to Roosevelt urging an American program to develop an atomic bomb to be used on Germany - not Japan. Einstein would have no part in the actual construction of the bomb, theoretical or practical, because he lacked the skills for either.

In December of 1946, Einstein rekindles his efforts for a World Government, with Israel apparently being the only autonomous nation. This push continues through the rest of the 1940s. In 1952, Einstein, who had been instrumental in the creation of the State of Israel, both politically and economically, is offered the presidency of Israel. He declines. In 1953, he spends his time attacking the McCarthy Committee, and he supports Communists such as J. Robert Oppenheimer. He encourages civil disobedience in response to the McCarthy trials. Finally, on April 18, 1955, this filthy Jewish demagogue dies.

Dead, the Jews no longer had to worry about Einstein making stupid statements. His death was just the beginning of his usage and exploitation by World Jewry. The Jewish-controlled media continued to promote the myth of this Super-Jew long after his death, and as more and more of the men who knew better died off, the Jews were more and more able to aggrandize his myth and lie more boldly. This brazen lying has culminated in the Jew controlled Time magazine naming Einstein "The Person of the Century" at the close of 1999. It may be demonstrated that the Jewish lies have become more bold with the

passage of time because Einstein was never named "Man of the Year" while he was alive, but now, over forty years after his death, he is named "Person of the Century."

Einstein was given this title in spite of the clear-cut choice for the "Person of the Century," Adolf Hitler. Hitler was indeed named "Man of the Year" while he was still living by Time magazine, and according to a December 27, 1999, article in the USA Today, Einstein was chosen over Adolf Hitler because of the perceived "nasty public relations fallout" that would accompany that choice; yet in internet polling by Time, Hitler finished third and was the top serious candidate. Still the issue of Time magazine dedicated to Einstein, which has articles by men with names like Isaacson, Golden, Stein, Rudenstine, and Rosenblatt, is interesting to read. For one, they found it necessary to include an article rationalizing why they did not pick the obvious choice, Adolf Hitler. But more interesting is the article by Stephen Hawking which purports to be a history of the theory of relativity. In it, Hawking admits many of the things in this article, such as the fact that Hilbert published the General Theory of Relativity before Einstein and that FitzGerald and Lorentz deduced the concept of relativity long before Einstein. Hawking also writes,

"Einstein...was deeply disturbed by the work of Werner Heisenberg in Copenhagen, Paul Dirac in Cambridge and Erwin Schr&#65533;dinger in Zurich, who developed a new picture of reality called quantum mechanics. ... Einstein was horrified by this ... Most scientists, however, accepted the validity of the new quantum laws because they showed excellent agreement with observations ... They are the basis of modern developments in chemistry, molecular biology and electronics and the foundation of the technology that has transformed the world in the past half-century."

This is all very true, yet the same magazine credits Einstein with all of the modern developments that Hawking names, even through Einstein was so stupid as to be vehemently against the most important idea of modern science, just as he opposed Schr&#65533;dinger's work in unified field theory which was far ahead of its time. The same magazine admits that "success eluded" Einstein in the field of explaining the contradictions between relativity and quantum mechanics. Today, these contradictions are explained by the unified field theory, but Einstein, who proves himself to be one of the least intelligent of 20th century scientists, refused to believe in either quantum theory or the unified field theory.

To name Einstein as "The Person of the Century" is one of the most ludicrous and absurd lies of all time, yet it has been successfully pulled off by Isaacson, Golden, Stein, Rudenstine, and Rosenblatt and the Jewish owners of Time magazine. If the Jews at Time wanted to give the title to an inventor or scientist, then the most obvious choice would have been men like Hilbert, Planck, or Heisenberg. If they wanted to give it to the scientist who most fundamentally changed the

landscape of 20th century science, then the obvious choice would be William Shockley. This Nobel prize winning scientist invented the transistor, which is the basis of all modern electronic devices and computers, everything from modern cars and telephones, VCRs and watches, to the amazing computers which have allowed incomprehensible advances in all fields of science. Without the transistor, all forms of science today would be basically in the same place that they were in the late 1940s.

However, the Jews cannot allow the due credit to go to William Shockley because he spent the majority of his scientific career demonstrating the genetic and mental inferiority of non-whites and arguing for their sterilization. His scientific, genetic views led the Jews to financially destroy Shockley who founded the first company in the Silicon Valley, his hometown, to develop computer chips. The Jews hired away his entire staff and used them to start Fairchild semiconductor, the company that today is known as Intel.

No the Jews could not let any of the truly great geniuses of our time be recognized, not the anti-Semite Henry Ford, not the great German scientists who helped the National Socialists in Germany, not Charles Lindbergh, who was sympathetic to National Socialist causes, and certainly not William Shockley, one of the most brilliant physicists and geneticists of our time. Instead, the Jews propped up the Zionist, Communist Albert Einstein who hated everything white.

After World War II, Einstein demonstrated his hatred of the White Race and of the Germans in particular in the following statements. He was asked what he thought about Germany and about re-educating the Germans after the war and said,

"The nation has been on the decline mentally and morally since 1870...Behind the Nazi party stands the German people, who elected Hitler after he had in his book and in his speeches made his shameful intentions clear beyond the possibility of misunderstanding. ... The Germans can be killed or constrained after the war, but they cannot be re-educated to a democratic way of thinking and acting..."

Oh Ye who paints with such a wide brush: Your right in that out of over 7000 stores nationwide your going to run into people who either a) haven't a clue or b) are new and still is learning. Has every employee at Autozone or PepBoys been an actual auto mechanic? Keep in mind also that over two thousand of the Radio Shack stores are privately owned Franchise stores of which mine is one. We are able to stock more items than the average company store simply because of available space. Additionally, as for having answers, out of eight employees at my store, Three are at least Juniors in electronics engineering at university, two others are extra class amateur radio operators, and two women that have been around it for years (my wife and my daughter). As for myself, 26 years as an Extra class(and very active) amateur radio operator, prior Navy communications tech, five years experience installing satellite systems, certified Hughes satellite system repair center, etc etc etc. So next time you start painting all of us with your broad brush, remember that there are some of us that do have answers, care about our customers, and are extremely proud of Radio Shack as a whole. Any other questions?

Will try this one more time with a price reduction before it's off to eBay...

I am selling a KENWOOD TK 805 D UHF 16 channel scanning mobile radio. This radio will do the 440 amateur band up through 470.
It is TOTALLY field programmable. No cables or software needed to program it. Commercial grade quality and audio in a nice small size. This radios are no longer made, and becoming hard to find. If you would like a picture, let me know and I will e-mail one to you. This one is in Excellent condition, like new, with microphone, cables, mounting bracket, etc. I will also include copies of the programming instructions.
You can check out my feedback on eBay, under OFFDAN.

$175.00, plus $10.00 to cover USPS Priority Mail, and insurance.

I will accept a US Postal money order, or a check. A check will delay shipment until it clears. I also can accept PAYPAL.

E-mail if interested.

Dan

According to Bill Gates, on Sun 27 Jan 2002 04:05:08p "Vince"
<radhamuk@yahoo.co.uk> knelt at the big white telephone, and heaved this
into uk.radio.amateur:

> Anyone have views of this radio? Good, Bad or In-different.
>
> Thanks...Vince
>
>

As a database scanner (stand-alone) it's good.
As a receiver, there are better.

> Any other questions?

actually... how is it owning a RS franchise? has business been getting better or worse? have you noticed a change in your types of customers? what is the most sold electronics components at your store? have you sold more radios since 9/11? any items in your store you do real well on if you sell? has corporate RS been helpful to you?

curious,
phil :)

Only 2% of the buisness? Try more like 15%...and that was in a smaller store
that I worked in. I really wouldn't notice it that much until I started
going over my month end reports when I was managing a store...but it does
stack up more than people would think.

Now, keep in mind, this would account for much more than just the electrical
components themselves, but also the project boxes, battery holders, wire
ties, and all the other little small electronic components sold in the
stores.

> wrote articles strangely similar to Einstein's Special Theory
> detailing what is now known as the Lorentz-FitzGerald Contraction. In
> 1898, the Irishman Joseph Larmor wrote down equations explaining the
> Lorentz-FitzGerald contraction and its relativistic consequences, 7
> years before Einstein's paper. By 1904, Lorentz transformations, the
> series of equations explaining relativity, were published by Lorentz.
> They describe the increase of mass, the shortening of length, and the
> time dilation of a body moving at speeds close to the velocity of
> light. In short, by 1904, everything in Einstein's paper regarding the
> Special Theory of Relativity had already been published.
>
> The Frenchman Poincar&#65533; had, in 1898, written a paper unifying many of
> these ideas. He stated seven years before Einstein's paper that,
>
> "... we have no direct intuition about the equality of two time
> intervals. The simultaneity of two events or the order of their
> succession, as well as the equality of two time intervals, must be

> defined in such a way that the statements of the natural laws be as
> simple as possible."
>
> Anyone who has read Einstein's 1905 paper will immediately recognize
> the similarity and the lack of originality on the part of Einstein.
> Thus we see that the only thing original about the paper was the term
> 'Special Theory of Relativity.' Everything else was plagiarized. Over
> the next few years, Poincar&#65533; became one of the most important
> lecturers and writers regarding relativity, but he never, in any of
> his papers or speeches, mentioned Albert Einstein. Thus, while
> Poincar&#65533; was busy bringing the rest of the academic world up to speed
> regarding relativity, Einstein was still working in the patent office
> in Bern and no one in the academic community thought it necessary to
> give much credence or mention to Einstein's work. Most of these early
> physicists knew that he was a fraud.
>
> This brings us to the explanation of Brownian motion, the subject of
> another of Einstein's 1905 papers. Brownian motion describes the
> irregular motion of a body arising from the thermal energy of the
> molecules of the material in which the body is immersed. The movement
> had first been observed by the Scottish botanist Robert Brown in 1827.
> The explanation of this phenomenon has to do with the Kinetic Theory
> of Matter, and it was the American Josiah Gibbs and the Austrian
> Ludwig Boltzmann who first explained this occurrence, not Albert
> Einstein. In fact, the mathematical equation describing the motion
> contains the famous Boltzmann constant, k. Between these two men, they
> had explained by the 1890s everything in Einstein's 1905 paper
> regarding Brownian motion.
>
> The subject of the equivalence of mass and energy was contained in a
> third paper published by Einstein in 1905. This concept is expressed
> by the famous equation E=mc^2. Einstein's biographers categorize this
> as "his most famous and most spectacular conclusion." Even though this
> idea is an obvious conclusion of Einstein's earlier relativity paper,
> it was not included in that paper but was published as an afterthought
> later in the year. Still, the idea of energy-mass equivalence was not
> original with Einstein.
>
> That there was an equivalence between mass and energy had been shown
> in the laboratory in the 1890s by both J.J. Thomsom of Cambridge and
> by W. Kaufmann in G&#65533;ttingen. In 1900, Poincar&#65533; had shown that there
> was a mass relationship for all forms of energy, not just
> electromagnetic energy. Yet, the most probable source of Einstein's
> plagiarism was Friedrich Hasen&#65533;hrl, one of the most brilliant, yet
> unappreciated physicists of the era. Hasen&#65533;hrl was the teacher of many
> of the German scientists who would later become famous for a variety
> of topics. He had worked on the idea of the equivalence of mass and
> energy for many years and had published a paper on the topic in 1904
> in the very same journal which Einstein would publish his plagiarized

> version in 1905. For his brilliant work in this area, Hasen&#65533;rhl had
> received in 1904 a prize from the prestigious Vienna Academy of
> Sciences.
>
> Furthermore, the mathematical relationship of mass and energy was a
> simple deduction from the already well-known equations of Scottish
> physicist James Maxwell. Scientists long understood that the
> mathematical relationship expressed by the equation E=mc^2 was the
> logical result of Maxwell's work, they just did not believe it. Thus,
> the experiments of Thomson, Kaufmann, and finally, and most
> importantly, Hasen&#65533;rhl, confirmed Maxwell's work. It is ludicrous to
> believe that Einstein developed this postulate, particularly in light
> of the fact that Einstein did not have the laboratory necessary to
> conduct the appropriate experiments.
>
> In this same plagiarized article of Einstein's, he suggested to the
> scientific community, "Perhaps it will prove possible to test this
> theory using bodies whose energy content is variable to a high degree
> (e.g., salts of radium)." This remark demonstrates how little Einstein
> understood about science, for this was truly an outlandish remark. By
> saying this, Einstein showed that he really did not understand basic
> scientific principles and that he was writing about a topic that he
> did not understand. In fact, in response to this article, J. Precht
> remarked that such an experiment "lies beyond the realm of possible
> experience."
>
> The last subject dealt with in Einstein's 1905 papers was the
> foundation of the photon theory of light. Einstein wrote about the
> photoelectric effect. The photoelectric effect is the release of
> electrons from certain metals or semiconductors by the action of
> light. This area of research is particularly important to the Einstein
> myth because it was for this topic that he unjustly received his 1922
> Nobel Prize.
>
> But again, it is not Einstein, but Wilhelm Wien and Max Planck who
> deserve the credit. The main point of Einstein's paper, and the point
> for which he is given credit, is that light is emitted and absorbed in
> finite packets called quanta. This was the explanation for the
> photoelectric effect. The photoelectric effect had been explained by
> Heinrich Hertz in 1888. Hertz and others, including Philipp Lenard,
> worked on understanding this phenomenon. Lenard was the first to show
> that the energy of the electrons released in the photoelectric effect
> was not governed by the intensity of the light but by the frequency of
> the light. This was an important breakthrough.
>
> Wien and Planck were colleagues and they were the fathers of modern
> day quantum theory. By 1900, Max Planck, based upon his and Wien's
> work, had shown that radiated energy was absorbed and emitted in
> finite units called quanta. The only difference in his work of 1900

> and Einstein's work of 1905 was that Einstein limited himself to
> talking about one particular type of energy - light energy. But the
> principles and equations governing the process in general had been
> deduced by Planck in 1900. Einstein himself admitted that the obvious
> conclusion of Planck's work was that light also existed in discrete
> packets of energy. Thus, nothing in this paper of Einstein's was
> original.
>
> After the 1905 papers of Einstein were published, the scientific
> community took little notice and Einstein continued his job at the
> patent office until 1909 when it was arranged for him to take a
> position at a school by World Jewry. Still, it was not until a 1919
> newspaper headline that he gained any notoriety.
>
> With Einstein's academic appointment in 1909, he was placed in a
> position where he could begin to use other people's work as his own
> more openly. He engaged many of his students to look for ways to prove
> the theories he had supposedly developed, or ways to apply those
> theories, and then he could present the research as his own or at
> least take partial credit. In this vein, in 1912, he began to try and
> express his gravitational research in terms of a new, recently
> developed calculus, which was conducive to understanding relativity.
> This was the beginning of his General Theory of Relativity, which he
> would publish in 1915. But the mathematical work was not done by
> Einstein - he was incapable of it. Instead, it was performed by the
> mathematician Marcel Grossmann, who in turn used the mathematical
> principles developed by Berhard Riemann, who was the first to develop
> a sound non-Euclidean geometry, which is the basis of all mathematics
> used to describe relativity.
>
> The General Theory of Relativity applied the principles of relativity
> to the universe; that is, to the gravitational pull of planets and
> their orbits, and the general principle that light rays bend as they
> pass by a massive object. Einstein published an initial paper in 1913
> based upon the work which Grossmann did, adapting the math of Riemann
> to Relativity. But this paper was filled with errors and the
> conclusions were incorrect. It appears that Grossmann was not smart
> enough to figure it out for Einstein. So Einstein was forced to look
> elsewhere to plagiarize his General Theory. Einstein published his
> correct General Theory of Relativity in 1915, and said prior to its
> publication that he, "...completely succeeded in convincing Hilbert
> and Klein." He is referring to David Hilbert, perhaps the most
> brilliant mathematician of the 20th century, and Felix Klein, another
> mathematician who had been instrumental in the development of the area
> of calculus that Grossmann had used to develop the General Theory of
> Relativity for Einstein.
>
> Einstein's statement regarding the two men would lead the reader to
> believe that Einstein had changed Hilbert's and Klein's opinions

> regarding General Relativity, and that he had influenced them in their
> thinking. However, the exact opposite is true. Einstein stole the
> majority of his General Relativity work from these two men, the rest
> being taken from Grossmann. Hilbert submitted for publication, a week
> before Einstein completed his work, a paper which contained the
> correct field equations of General Relativity. What this means is that
> Hilbert wrote basically the exact same paper, with the same
> conclusions, before Einstein did. Einstein would have had an
> opportunity to know of Hilbert's work all along, because there were
> Jewish friends of his working for Hilbert. Yet, even this was not
> necessary, for Einstein had seen Hilbert's paper in advance of
> publishing his own. Both of these papers were, before being printed,
> delivered in the form of a lecture.
>
> Einstein presented his paper on November 25, 1915 in Berlin and
> Hilbert had presented his paper on November 20 in G�ttingen. On
> November 18, Hilbert received a letter from Einstein thanking him for
> sending him a draft of the treatise Hilbert was to deliver on the
> 20th. So, in fact, Hilbert had sent a copy of his work at least two
> weeks in advance to Einstein before either of the two men delivered
> their lectures, but Einstein did not send Hilbert an advance copy of
> his. Therefore, this serves as incontrovertible proof that Einstein
> quickly plagiarized the work and then presented it, hoping to beat
> Hilbert to the punch. Also, at the same time, Einstein publicly began
> to belittle Hilbert, even though in the previous summer he had praised
> him in an effort to get Hilbert to share his work with him. Hilbert
> made the mistake of sending Einstein this draft copy, but still he
> delivered his work first.
>
> Not only did Hilbert publish his work first, but it was of much higher
> quality than Einstein's. It is known today that there are many
> problems with assumptions made in Einstein's General Theory paper. We
> know today that Hilbert was much closer to the truth. Hilbert's paper
> is the forerunner of the unified field theory of gravitation and
> electromagnetism and of the work of Erwin Schr�dinger, whose work is
> the basis of all modern day quantum mechanics.
>
> That the group of men discussed so far were the actual originators of
> the ideas claimed by Einstein was known by the scientific community
> all along. In 1940, a group of German physicists meeting in Austria
> declared that "before Einstein, Aryan scientists like Lorentz,
> Hasen�hrl, Poincar�, etc., had created the foundations of the theory
> of relativity..."
>
> However, the Jewish media did not promote the work of these men. The
> Jewish media did not promote the work of David Hilbert, but instead
> they promoted the work of the Jew Albert Einstein. As we mentioned
> earlier, this General Theory, as postulated by Hilbert first and in
> plagiarized form by Einstein second, stated that light rays should

> bend when they pass by a massive object. In 1919, during the eclipse
> of the Sun, light from distant stars passing close to the Sun was
> observed to bend according to the theory. This evidence supported the
> General Theory of Relativity, and the Jewish-controlled media
> immediately seized upon the opportunity to prop up Einstein as a hero,
> at the expense of the true genius, David Hilbert.
>
> On November 7th, 1919, the London Times ran an article, the headline
> of which proclaimed, "Revolution in science - New theory of the
> Universe - Newtonian ideas overthrown." This was the beginning of the
> force-feeding of the Einstein myth to the masses. In the following
> years, Einstein's earlier 1905 papers were propagandized and Einstein
> was heralded as the originator of all the ideas he had stolen. Because
> of this push by the Jewish media, in 1922, Einstein received the Nobel
> Prize for the work he had stolen in 1905 regarding the photoelectric
> effect.
>
> The establishment of the Einstein farce between 1919 and 1922 was an
> important coup for world Zionism and Jewry. As soon as Einstein had
> been established as an idol to the popular masses of England and
> America, his image was promoted as the rare genius that he is
> erroneously believed to be today. As such, he immediately began his
> work as a tool for World Zionism. The masses bought into the idea that
> if someone was so brilliant as to change our fundamental understanding
> of the universe, then certainly we ought to listen to his opinions
> regarding political and social issues. This is exactly what World
> Jewry wanted to establish in its ongoing effort of social engineering.
> They certainly did not want someone like David Hilbert to be
> recognized as rare genius. After all, this physicist had come from a
> strong German, Christian background. His grandfather's two middle
> names were 'F�rchtegott Leberecht' or 'Fear God, Live Right.' In
> August of 1934, the day before a vote was to be taken regarding
> installing Adolf Hitler as President of the Reich, Hilbert signed a
> proclamation in support of Adolf Hitler, along with other leading
> German scientists, that was published in the German newspapers. So the
> Jews certainly did not want David Hilbert receiving the credit he
> deserved.
>
> The Jews did not want Max Planck receiving the credit he deserved
> either. This German's grandfather and great-grandfather had been
> important German theologians, and during World War II he would stay in
> Germany throughout the war, supporting his fatherland the best he
> could.
>
> The Jews certainly did not want the up-and-coming Erwin Schr�dinger to
> be heralded as a genius to the masses. This Austrian physicist would
> go on to teach at Adolf Hitler University in Austria, and he wrote a
> public letter expressing his support for the Third Reich. This
> Austrian's work on the unified field theory was a forerunner of modern

> physics, even though it had been criticized by Einstein, who
> apparently could not understand it.
>
> The Jews did not want to have Werner Heisenberg promoted as a rare
> genius, even though he would go on to solidify quantum theory and
> contribute to it greatly, as well as develop his famous uncertainty
> principle, in addition to describing the modern atom and nucleus and
> the binding energies that are essential to modern chemistry. No, the
> Jews did not want Heisenberg promoted as a genius because he would go
> on to head the German atomic bomb project and serve prison time after
> the war for his involvement with the Third Reich.
>
> No, the Jews did not want to give credit to any of a number of white
> Germans, Austrians, Irishmen, Frenchmen, Scotsmen, Englishmen, and
> even Americans who had contributed to the body of knowledge and
> evidence from which Einstein plagiarized and stole his work. Instead,
> they needed to erect Einstein as their golden calf, even though he
> repeatedly and often embarrassed himself with his nonfactual or
> nearsighted comments regarding the work he had supposedly done. For
> example, in 1934, the Pittsburgh Post-Gazette ran a front page article
> in which Einstein gave an "emphatic denial" regarding the idea of
> practical applications for the "energy of the atom." The article says,
>
> "But the 'energy of the atom' is something else again. If you believe
> that man will someday be able to harness this boundless energy-to
> drive a great steamship across the ocean on a pint of water, for
> instance-then, according to Einstein, you are wrong..."
>
> Again, Einstein clearly did not understand the branch of physics he
> had supposedly founded, though elsewhere in the world at the time
> theoretical research was underway that would lead to the atomic bomb
> and nuclear energy. But after Einstein was promoted as a god in 1919,
> he made no real attempts to plagiarize any other work. Rather, he
> began his real purpose - evangelizing for the cause of Zionism and
> World Jewry. Though he did publish other articles after this time, all
> of them were co-authored by at least one other person, and in each
> instance, Einstein had little if anything to do with the research that
> led to the articles; he was merely recruited by the co-authors in
> order to lend credence to their work. Thus freed of the pretense of
> academia, Einstein began his assault for World Zionism.
>
> In 1921, Einstein made his first visit to the United States on a
> fund-raising tour for the Hebrew University in Jerusalem and to
> promote Zionism. In April of 1922, Einstein used his status to gain
> membership in a Commission of the League of Nations. In February of
> 1923, Einstein visits Tel Aviv and Jerusalem. In June of 1923, he
> becomes a founding member of the Association of Friends of the New
> Russia. In 1926, Einstein took a break from his Communist and
> Zionistic activities to again embarrass himself scientifically by

> criticizing the work of Schr&#65533;dinger and Heisenberg. Following a brief
> illness, he resumes his Zionistic agenda, wanting an independent
> Israel and at the same time a World Government.
>
> In the 1930s he actively campaigns against all forms of war, although
> he would reverse this position during World War II when he advocated
> war against Germany and the creation of the atomic bomb, which he
> thought was impossible to build. In 1939 and 1940, Einstein, at the
> request of other Jews, wrote two letters to Roosevelt urging an
> American program to develop an atomic bomb to be used on Germany - not
> Japan. Einstein would have no part in the actual construction of the
> bomb, theoretical or practical, because he lacked the skills for
> either.
>
> In December of 1946, Einstein rekindles his efforts for a World
> Government, with Israel apparently being the only autonomous nation.
> This push continues through the rest of the 1940s. In 1952, Einstein,
> who had been instrumental in the creation of the State of Israel, both
> politically and economically, is offered the presidency of Israel. He
> declines. In 1953, he spends his time attacking the McCarthy
> Committee, and he supports Communists such as J. Robert Oppenheimer.
> He encourages civil disobedience in response to the McCarthy trials.
> Finally, on April 18, 1955, this filthy Jewish demagogue dies.
>
> Dead, the Jews no longer had to worry about Einstein making stupid
> statements. His death was just the beginning of his usage and
> exploitation by World Jewry. The Jewish-controlled media continued to
> promote the myth of this Super-Jew long after his death, and as more
> and more of the men who knew better died off, the Jews were more and
> more able to aggrandize his myth and lie more boldly. This brazen
> lying has culminated in the Jew controlled Time magazine naming
> Einstein "The Person of the Century" at the close of 1999. It may be
> demonstrated that the Jewish lies have become more bold with the
> passage of time because Einstein was never named "Man of the Year"
> while he was alive, but now, over forty years after his death, he is
> named "Person of the Century."
>
> Einstein was given this title in spite of the clear-cut choice for the
> "Person of the Century," Adolf Hitler. Hitler was indeed named "Man of
> the Year" while he was still living by Time magazine, and according to
> a December 27, 1999, article in the USA Today, Einstein was chosen
> over Adolf Hitler because of the perceived "nasty public relations
> fallout" that would accompany that choice; yet in internet polling by
> Time, Hitler finished third and was the top serious candidate. Still
> the issue of Time magazine dedicated to Einstein, which has articles
> by men with names like Isaacson, Golden, Stein, Rudenstine, and
> Rosenblatt, is interesting to read. For one, they found it necessary
> to include an article rationalizing why they did not pick the obvious
> choice, Adolf Hitler. But more interesting is the article by Stephen

> Hawking which purports to be a history of the theory of relativity. In
> it, Hawking admits many of the things in this article, such as the
> fact that Hilbert published the General Theory of Relativity before
> Einstein and that FitzGerald and Lorentz deduced the concept of
> relativity long before Einstein. Hawking also writes,
>
> "Einstein...was deeply disturbed by the work of Werner Heisenberg in
> Copenhagen, Paul Dirac in Cambridge and Erwin Schr�dinger in Zurich,
> who developed a new picture of reality called quantum mechanics. ...
> Einstein was horrified by this ... Most scientists, however, accepted
> the validity of the new quantum laws because they showed excellent
> agreement with observations ... They are the basis of modern
> developments in chemistry, molecular biology and electronics and the
> foundation of the technology that has transformed the world in the
> past half-century."
>
> This is all very true, yet the same magazine credits Einstein with all
> of the modern developments that Hawking names, even through Einstein
> was so stupid as to be vehemently against the most important idea of
> modern science, just as he opposed Schr�dinger's work in unified field
> theory which was far ahead of its time. The same magazine admits that
> "success eluded" Einstein in the field of explaining the
> contradictions between relativity and quantum mechanics. Today, these
> contradictions are explained by the unified field theory, but
> Einstein, who proves himself to be one of the least intelligent of
> 20th century scientists, refused to believe in either quantum theory
> or the unified field theory.
>
> To name Einstein as "The Person of the Century" is one of the most
> ludicrous and absurd lies of all time, yet it has been successfully
> pulled off by Isaacson, Golden, Stein, Rudenstine, and Rosenblatt and
> the Jewish owners of Time magazine. If the Jews at Time wanted to give
> the title to an inventor or scientist, then the most obvious choice
> would have been men like Hilbert, Planck, or Heisenberg. If they
> wanted to give it to the scientist who most fundamentally changed the
> landscape of 20th century science, then the obvious choice would be
> William Shockley. This Nobel prize winning scientist invented the
> transistor, which is the basis of all modern electronic devices and
> computers, everything from modern cars and telephones, VCRs and
> watches, to the amazing computers which have allowed incomprehensible
> advances in all fields of science. Without the transistor, all forms
> of science today would be basically in the same place that they were
> in the late 1940s.
>
> However, the Jews cannot allow the due credit to go to William
> Shockley because he spent the majority of his scientific career
> demonstrating the genetic and mental inferiority of non-whites and
> arguing for their sterilization. His scientific, genetic views led the
> Jews to financially destroy Shockley who founded the first company in

> the Silicon Valley, his hometown, to develop computer chips. The Jews
> hired away his entire staff and used them to start Fairchild
> semiconductor, the company that today is known as Intel.
>
> No the Jews could not let any of the truly great geniuses of our time
> be recognized, not the anti-Semite Henry Ford, not the great German
> scientists who helped the National Socialists in Germany, not Charles
> Lindbergh, who was sympathetic to National Socialist causes, and
> certainly not William Shockley, one of the most brilliant physicists
> and geneticists of our time. Instead, the Jews propped up the Zionist,
> Communist Albert Einstein who hated everything white.
>
> After World War II, Einstein demonstrated his hatred of the White Race
> and of the Germans in particular in the following statements. He was

Lardassed fuckwit
"Stagger 'TexASS Turd' Lee" <SLee@houston-hunks.com> wrote in message
news:3C545B27.E174B268@houston-hunks.com...
> Heh. KC8JBO [Projection]

Heh. KC8JBO OWNS you, TexASS TURD.

Anonymous coward and all-around fuckwit
"Stagger Lee" <SLee@houston-hunks.com>
revealed what a hypocrite he is and ironically admits he has no credibility
in message
<3C36FDCC.76EC185D@houston-hunks.com> :

"Therefore, I find your story difficult to believe. Your own anonymous
status makes the story even less credible."

Faggot Stagger Lee, who fails to "grasp" the concept that "slander" is
spoken and "libel" is written, would be better served if he just stuck
to grasping nutsacks, incoherently babbled
in <3C4AE592.6A0CDA7E@houston-hunks.com>:

"COTSE seemed to have the laughable notion that what Wiseman was doing
was exercising freedom of speech. Slander is of course not protected
speech in the US, but the concept that even free speech has its limits
seemed to be impossible for Steve Gielda -- COTSE's owner -- to grasp."
--
Fuckwit Lee finally admits his SPANK at KC8JBO's hands yet another time in
3C4AE592.6A0CDA7E@houston-hunks.com:
"[Any followups by Wiseman will be ignored.]"

Au contrare!!!

I was told by a Shack employee, who just happen to be a hobbyist like
us, that RS will be getting out of the electronic component biz at the
end of this year.

I just snipped a ling essay about such, just like to say that Steve at
my local parts house, oughtta welcome the news. Been hanging on, as
the TV shops have died out this last decade, and It'd be great for him
to take up the slack! His stuff is better (and less expensive) than
Shack anyway..

here in British Columbia. I was told by the owner they were too. gettingout
of the electronic parts buisness. Everyday I see less and less parts.
Luckily I am now distributing hard to find electronic parts and common
electronic parts. Atleast someone has a place to turn to. Why pay almost 1
buck for a 10 cent capacitor.

Well i would like to say, i wish we had Radio Shack's such as your's here. I only knew of one franchised Radio Shack here in CO and he closed shop about 6 years ago and was about 30 miles from here. Nice guy though, wish he was still around, and no i do understand that not everyone there is going to be knowlegable, but around here, and im not being sarcastic, i havent found one radio shack that anyone there had a clue about anything they sold other than Cell phone's. To me, thats sad. I used to spend hours when i was younger, roaming around the radio shacks, after school on Mondays and Tuesdays they did stocking and i was able to help out there... So its not that i hate them, i just wish they were a little more like their ad's around here. RadioShack.Com stores are MUCH different, the people there usualy are fairly knowlegable or can find someone who can help you, unfortunatly they are closing that store down as quickly as Tech America disapeared heh.

And as for "Painting" im sorry i generalized there, but im serious when i say Colorado radio shacks are nearly worthless unless its stocked, and you know what and where it is. I still think they are rediculas when it comes to replacement components for scanners, etc. I spend 12 bucks on a stupid transformer (Audio) in a pro-2006, 5 bucks for a transistor in the same scanner and 35 for a EL replacement. the EL used to be like 10 bucks. I can understand those being pricing since they are scarse now, but come on.. a transistor and transformer that they probably still use any numerious products, priced that high is beyond me. I will say that i've never had a bad experience as far as employee's go, they are fairly nice people on most occasions :)

And if you ever deside to move to CO, let me know, i would much rather visit your store..

Boy, that's the truth. There isn't a Radio Shack employee anywhere, I'd bet, with any knowledge of what the name represents, or what a real parts house is. Damn shame. Once a good name, Tandy pretty much ruined it when he bought it, but the JC Penny approach to "electronics" is sad. Thankfully I still have a couple of parts houses, and a Frys here in Austin. But Tandy has been aiming for lowest common for years, and got there finally.

Their slogan would be much more accurate if it was:

"You've got questions?...We've got blank stares"

-G

I've lived all over the state, if you look in out phonebook there are a number of electronics shops all over the state, in the "Big City" as you call it and out on the plains. Sure they are less common the further you go into the country, but i've never had much of a hard time finding parts no matter where i lived. Either way, i see your point and the irritance level but if i needed parts or did alot of work, i would purchase at least $100 worth of parts that are fairly common from MCM Electronics or any number of other stores online. And yes before anyone asks, there are parts you can't get because its either A: not in stock or B: not a stocked part. So i have had to order stuff online and spend a little extra, but at least i have my parts. I dont always have to order online if i cant find it, generally the shop/store will order ir for me and i only pay the normal rate and no S&H or minimum ammounts. Guess i would be a little spoiled being here in the "Burbs" heh, but i do have friends who live in the mountains and they drive a couple hours for parts so i do know what you are talking about and understand.

73's and hopefully you will get a local parts house other than radio shack because i KNOW they cant/wont/dont stock or even carry everything you need :)

Is the pro2006 service manual availble on the internet in .pdf or something like that?

1524. Re: Does my Radio Shack PRO-93 have the alpha tag overlay bug ??

Newsgroup: rec.radio.scanner
Date: 2002-01-28 02:31:53 UTC
From: Al Kyder <OsamaYomama@al.kyder.net>
Message-ID: <270120022031533078%OsamaYomama@al.kyder.net>
Source record: 53292

My understanding is that the number of text tags available is 256 (a nice 8 bit number, huh?) This scanner has 300 channels so the overlay will not correspond as 005 = 905. There would be 44 channels overlapping. bank 8 channel 16 would be the 256th channel. 005 would equal 821. Look there to see if a change had been made.

Then again....I actually have one and I like it very much.

HF performance is not quite up to the AR7030, but very good, audio quality
is excellent. Decent wideband receiver, too. Easy to operate for what it
does, very complete set of features.

I am very happy with mine, and I use it as much as my ICOM R8500.

Hi Marcus,
The TV video demodulators for the 7000 & 7100 are the worst I have ever used. They have very noisy video even with a signal strong enough to lite up a light bulb. I hope you experience one before buying.

What do you mean noisy video Mike? I have the 7000 adapter and use it
all the time with great results. Crystal clear picture on the locals.
Not HDTV but. :-)

Well, actually Phil, things have been pretty good overall in our business.
The slowing economy has had some effect flattening out sales, but 2001 was
as good as 2000. Cell phone sales are up, satellite sales down, computer
sales almost non-existent but computer accessories are doing well. I have
been thinking about carrying more amateur radio related items but have held
off for the last five years in respect to my former employers at R & L
Electronics, they are only 40 minutes drive away. Try my website at

Hi, Jesse.

I am glad that you insist on such well qualified employees at your store.
You are to be commended for that. By the way, being a junior or senior in
electrical engineering does not mean that the person knows anything at all
about practical electronics.

But your store is a rarity. In almost every instance where I have overheard
someone asking a question - they get an answer. The problem is that the
answer is often totally wrong or incomplete. I don't think I have ever heard
a RS employee answer with "I don't know."

While shopping in Kenosha, WI two weeks ago, my brother and I stopped at the local Radio-Shack to pick up a ground-loop isolator to solve a hum problem with his turntable. Not spotting it right away, when a clerk walked up to us we asked about it. He responded by asking what application we had planned it for, described the problem, and he confirmed our diagnosis. He then told us that the R-S isolator was pretty much "junk", and said it may not solve the problem, but to go ahead and try it, as it can always be returned. I asked a couple of other questions about where in the store certain parts were to be found, and he knew immediately where each one was. To say the least, I was impressed and remarked to my brother what a rare find this clerk was. Back home in the Fox Valley of Wisconsin, I find most R-S employees totally clueless---a trait they share with their managers. This is probably one of the reasons most R-S stores have such incompetent employees: No employer wants employees that are smarter than they are.

So we have to look at all R-S stores carefully. Find those stores with employees that know their products, and patronize them. Don't shop at the R-S stores that are run by clowns. Maybe the trend will become that the knowledgeable stores will rise above the rest, and the R-S chain will learn from it. But then again, most customers are also clueless (Why else would they be asking R-S employees for answers?) and will make almost

any R-S store profitable.

(Special message to R-S Corporate management that may be following these threads: Don't punish the Kenosha employee for telling us one of your products is "junk". You all know you sell some great products as well as some junk. The Kenosha employees' honesty was greatly appreciated.)

No one cared in 20's or 30's Germany either.

Sometimes spam is just spam, but whomever wrote this, whether or not it is in fact Marjorie Knoller (judging from the clear email address it very well could be), certainly, in the very least, did just enough research to outwit the uninformed. There are lunatics and then there are lunatics. It is the "smart" lunatics that you have to watch out for.

I care far less as to what newsgroups this has been sent to than its illegitimate content.

Thanks to all who responded to my query on how to mount rigs in my Explorer.

I'm searching around for a mobile scanner antenna. I was wondering if I could get some opinions/feedback on scanner antennae. I tried to list considerations/requirements to minimize questions :)

Primary considerations are (in order):
1. Size: Short! (14in/35cm max), for roof-mounting. I have 14in of clearance at my garage door opening.
2. Mounting: it needs to be permanently mounted (i.e. cable feed thru hole in roof) to vehicle ('97 Ford Explorer XLT)
3. Flexible: The whip needs able tolerate bending a bit, for those infrequent parking garages visits,etc
4. Not really interested in trunk or mirror mounted antennae

Primary bands of interest would be (in order):
1. VHF Hi ~155Mhz
2. UHF ~460Mhz & ~860Mhz
3. VHF-Lo (~44Mhz) band is also of interest but I realize the small size consideration pretty much nullifies any good performance here

I realize that the bigger the antenna (generally) the better it will perform. However, I'm primarily looking for *low profile* solution and can readily accept an antennna that doesn't have optimum gain. What I'm hoping to find is something that performs better than the rubber duck antenna in inside of the car (yuk). I have mag-mount antennae that I can whip out if I need the gain, however mounting/unmounting gets very old doing it every single day.

Some potential solutions I've thought about:

1. 2m/440 or 440 Ham antenna - any model # suggestions? Comet B-10 http://www.universal-radio.com/catalog/hamantm/3918.html ?
I've only used basic magmounts here in the past for ham activities. A drawback here would be that I plan to have a 2m/440 transmitter in the vehicle, and would be wary of permanently destroying the scanner's front end with 25w of RF by using a resonant receiving antenna!?!?

2. AntennaPlus Mobile Antennas http://www.antennaplus.com/
Some interesting low profile antennae here. Only designed for 220Mhz and UHF though.

3. Splitter for existing FM Broadcast band antenna. Something like http://www.universal-radio.com/catalog/scanants/4534.html
Anyone had inter-radio interference with this solution? What IFs do typical factory AM/FM radios use anyways? I plan to use a triple-conversion

receiver, probably a 780XLT,2006,etc.

Comments or suggestions on anything above?

It is getting harder to find local sources,RadioShack is now more of an
appliance store and fewer components,don't even ask about doublegang
capacitors
anymore:-) Do they still sell electrolytics?

I want an outdoor antenna for my BC780XLT. Grove has the AOR DA3000 Wideband Discone for $130. Is there anything better in this price range?

I'm in an office building so I'll have a cable run of about 125 feet. I use Beldin 9913 for all my HF stuff. Can I use this cable for the scanner too or is there something better I should get?

Thanks,
John

What's the best software to buy for the scanner? I want to use the software to program the scanner and it would be really cool if I could record audio files too.

I already have the ScanCat SE Upgrade (I don't have the base Scan Cat software though). So I need to either buy WinScan780 or ScanCat Gold. What should I do?

Thanks,
John

The name is "Radio Shack"....RADIO SHACK! It originally was a store for hobbyists and radio amateurs.
Now you walk in and ask a simple radio-related question and they look at you like you are from outer space.
Obviously thier customer demographics have changed over the years and they had to change to remain financially viable, but they need to change thier name now, as they no longer serve the people who have spent so much time in those little structures they use as thier name.

How about changing it from "Radio Shack" to "Useless Crap"?

Bliben

Another option is to get a rig like say, an IC706 and some control
s/ware off the internet, and link to pc via the CI-V interface.
Probably a better rx, certainly better with an extra filter added.
Plus you can tx if u want.

<added to hopefully avoid 99% of stupid follow ups: Yes we all know
M3s can't use 10M ok? >

Hi,
If you want to buy then ARC780 from http://www.butel.nl/ is the best.
If you want one free, then try mine:

That's a GRET deal on a GREAT little scanner! I started running mine in the car with the CD-Cassette adapter plugged in to it, and it performs superbly!

Wow, your handle just took me back a lotta years! Can one still get Heath Kit radios? I haven't heard of thos in 20 years...

ANYway, I was responding to someone ELSE saying the R2 is so cheap, and that made them think maybe it wasn't a "serious" scanner. I didn't see anyone talking about FIFTY bucks, but it seems the R2 can be gotten for $130 - pretty cheap.
